1. Questions about Heathkit "Apache" TX-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-01 00:00:00 UTC
From: James Peach <dpeach@earthlink.net>
Message-ID: <01bc85cf$22bd7f60$51c10c26@stephanie-peach>
Source record: 118407

I have a Heathkit TX-1 Apache that a friend gave me a couple of years ago. He built it in 1955. I have all of the original manuals. It was working fine when he put it away in 1974. I have never tried to fire it up (tubes were old news by the time I was born, so I am afraid of blowing up something that I do not understand).

The body is in excellent condition. Inside has some dust. The top has a couple of small scratches. Very well documented mods on this radio (he developed and built hospital electronic equipment, therefore knows the importance of documenting everything done).

I am wondering how I could go about finding a collector or dealer that would give me an estimate on what this rig is worth. I am not sure I am in the market to sell, but would like to know approximate worth for this equipment.

Please write me at dpeach@earthlink.net or dpeach@juno.com.

BTW, I bought new tubes to replace the ones that tested bad on a tube tester (which were most of them).

Thank You,

David

Why not ceramic? What's the downside?

Ever see a 0.5 mF 400V disc ceramic cap? Neither have I.

There are some other issues involved, such as effective series resistance and current-handling capacity. The Sprague Orangedrops are cheap enough and easy enough to obtain, and do the job OK.

You could probably salvage some paper caps from somewhere, if you had to. Burning wax makes a nice smell.

Yo "Non-HP Employee" in Roseville! "HP Retired in Sa Diego" Rod here.
There is an excellent book on the Hallicrafters by Chuck Dachis, a few
quotes:
SX-96 -- 1955-1956 Dual Conversion - $249.50 new cost. Suggested used --
$125-$175. 12-Tubes covered BC Band and 1.72 MHz to 34 MHz. How about
that 56 Chevy Convertible we sold as well as the Hallicrafters?????

20. For Trade: H.H. Scott 100w Stereo Tube Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-01 00:00:00 UTC
From: jkh@meaddata.com
Message-ID: <5pb0ic$m9t@mailgate.lexis-nexis.com>
Source record: 118426

Folks,
I have an H.H. Scott stereo tube amp which puts out 50w per channel. It has P-P 7581 finals in each channel. It was purchased new by my brother around 1961, used by him(mounted in a cabinet) for about 20 years, when I accquired it. I have used it some but not long. It still works, on both channels, but needs work. It comes with a complete set of new tubes, the finals being 4 matched SovTek ruggedized versions. The drivers are, if I remember correctly, 6L6's. As I said, it works, but at rather volume. It needs new caps, I would imagine, in the power supply. Cosmetically it is about an 8/10. The front panel shows wear of the lettering in spots, but is otherwise fine. There is no rust or physical damage. I have a photocopy of the original owners manual, supplied by Scott(at my request), in the early 80's.

I would trade this nice amp for a 20's/30's communication radio, early cathedral, or early(20's) broadcast radio, of comparable value. If interested in discussing a possible trade, please email or phone me at the address listed below. I am *not* interested in a direct sale. Thank you.

I didn't know that dispenser cathodes were used in vacuum tubes or
CRTs, but I CAN tell you what a dispenser cathode is.

A dispenser cathode is a piece of sintered tungsten. Because it is
sintered, it is porous, and the pores are filled with a good
thermionic electron emitter (low work function material.) The
tungsten is heated either by running a current through it or by a
separate heater.

In the more common types of cathodes the low work function material is
just painted on the surface of the tungsten; after some period of time
enough of this material sublimates to other parts of the tube that the
cathode loses emission, but in a dispenser cathode the emitting
surface is replenished by the flow of material that is slowly
"dispensed" from the porous bulk of the cathode.

Dispenser cathodes are usually made in bulk sizes and machined to
final shape. The ones I have experience with are custom made and are
quite expensive ($100-1000@), but I suppose it would be possible to
bring the price down quite a bit if they were mass produced in
standard geometries.

Well, I thought HDTV would create demand for more tall towers too.
But it looks like many broadcasters have decided to let their old towers
do dual duty. It is a serious hassle to get a new tower permitted, and
they aren't cheap either. We looked at it, and decided to reinforce our
existing tower instead, and use a dual purpose antenna during the
phase in period.

Cell towers typically aren't very tall. That would be undesired because
it would make the cell too large. PCS wants even lower antennas because
it is essentially a micro-cellular system.

Over at Halted I saw a fair quantity of ballast tubes, forgot the number though

Something like xx45. Maybe if this turns out to be the ballast tube
in the R390 front end, people could get a few.

It's something like 3FT7 I think. It's not too crucial an item as I ran
my R390A from 90 to 130 volts on the variac and it drifted only
about 400Hz. (This is with a 12BY7 filament acting as a ballast).
If your line voltage is typically stable, drift isnt a major issue.

They are nice to have but you can get along with one of the several
alternatives.

32. WTB: Collins S-line cabinet

Collins made manual ATU's for the various military transmitters that
they built. I have one that was used with a 4CX250(pair) amplifier.
This was not aviation but was a shipboard system.

>..Dave

According to "Radios by Hallicrafters" by Chuck Dachis, you may be
talking about the PORTAMON. It was made from 1967 through 1969 in
five models: CRX-100, 27-50MHz AM; CRX-101, 108-135MHz AM; CRX-102,
144-174MHz FM; CRX-106, 27-50MHz AM; and CRX-107, 144-174MHz FM.
The 100/101/102 models had 9 transistors and 3 diodes while the
106/107 models had squelch, 12 transistors, and 4 diodes.

I've never seen one -- but Chuck's book has some good pictures.

Vic, W9RGB

38. Did ==<COLLINS>== make a manual ATU

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-02 00:00:00 UTC
From: Joe FITR BV/N0IAT <joentam@transend.com.tw>
Message-ID: <33B9A8A8.6E67@transend.com.tw>
Source record: 118430

Hi,
Did Collins Radio Corporation ever produce a
manual antenna tuner?

I understand they did make a "trailing wire" ATU
(180S, I think), but that was really for Avation
use if I recall.

I've never seen a "station" console with an ATU
in it -- like the 312B4 or 312B5. I am guessing
that most rigs of the era used a PI network,
hence a tuner was a seldom requested or required
piece of station gear (unless feeding balanced line
antennas).

Thanks,
Joe

The LS stands for "Linear Standard" and was advertised with a
guaranteed frequency response of +/- 1db 7-50,000 cps on the high
level units (which yours is) making it an ideal transformer for
uniform frequency response and low distortion. The LS-55 should
measure 3 1/2" x 4 7/16" x 4 3/16"h. and weigh 7 1/2 pounds. Its
application is shown as P-p output with a primary impedance, ohms, of
5K/3K split. Secondary impedances are shown as follows: 500, 333,
250/200, 125, 50, 30, 20, 10, 7.5, 5, 2.5, and 1.2 ohms. The level is
shown as 20 watts. This information comes from the 1965 edition of
the Radio-Electronic Master which shows the net price of the LS-55 as
$24.00. I would imagine that it would cost considerably more today!

Hope this is of help to you.

73,
Ken K4XL

Source record: 118449

Hi Folks,

I have available for sale an extremely well built high power AM transmitter that covers 160 thru 10 meters. Final is a 4CX1500A modulated by a pair of 3CX1200A7's using 5KW broadcast iron. Fully metered, vacuum variables with turns counters, extra final tube, all machining professionally done. Plate power supply not included, needs 3500VDC at up to 1.5 amps, depending on the desired output power. All other supplies built in. Requires about a total of 26" of 19" rack space, plus room for the modulation transformer, reactor and plate supply. It can run very conservativly at 375 watts out...up to....well look up the final tube. Priced at around $1.00 a watt at full output. Due to weight it is pick up only in Bolton, MA. 30 miles west of Boston.

Need room for the next rig under construction.

Chuck...K1KW

Joe
Yes the 180S is the manual tuner made by collins that most amateurs use.
It was a standard part of some of the military KWM-2A packages. While
primarily designed for trailing wire, it works just fine on a wide range
of amateur antennas and is one of the most efficient ATU's available.
Recent articles have used it as the efficiency standard by which other
ATU's are "compared"

>back opening a bit!) Thanks Jeep K3HVG

Jeep,
The only S-line cabinets deep enough for the 51S-1 are the KWM-2 and
30L-1. The 30L-1 is not a good prospect as the rear panel arrangement
is very different. I've seen the KWM-2 cabinet used for the 51S-1,
not a perfect match, but probably the best you can do. There is a
company in AZ which has been promising newly-manufactured cabinets for
a year or so, but haven't seen anything yet. Believe it's Romad, they
do make Collins-repro rack mounts for S-line.

Good luck, Greg K3EWZ

69. Stan King W4KR ex-W8POZ SCAM ARTIST

Stan King W4KR ex-W8POZ SCAM ARTIST

I need any information on the present whereabouts of Stan King, callsign W4KR (ex-W8POZ). He left many hams in southeastern Michigan holding the bag for many thousands of dollars in an elaborate scam.

In spite of a court order (relating to these frauds) to keep his current address on file with the court in Ann Arbor, Michigan, he skipped the state in late 1996. His current W4KR license address shows a "dead-end" mail drop in Florida, and his driver's license was changed to Texas with a false address.

If you know where this crook is, please email me with the information. Any tip, no matter how small, is helpful.

73, and thank you very much.

One theory I heard proposed is that the silicon that was put in the nickel tubing to make the cathodes easier to draw was leeching out into the oxide layers on the cathode and poisoning the emitting surface. Apparently this silicon was eliminated in later manufacture. Any confirmation on this?

Source record: 118377

Hello de KA2YPT

I wish to sell a mint 75A-4 that I inherited a few years ago. It is in perfect working order and never ceases to amaze me how well calibrated it had remained. It has the 4 to 1 spinner dial and contains 3 mechanical filters, the stock 3.1 khz, the somewhat rare rtty 1.5 khz and the very rare 2.1 "narrow ssb". Cosmetics are beautiful and the radio is a very large delight to behold..HI. Serial number of this unit is 4181. I have the original manual and calibration/test data sheet of the unit. Prefer pickup as I am a little hesitant to ship this beauty, but will consider meeting buyer 1/2 way within reason. Of course would love to demo for prospective new owner. This radio would be a showpiece in any ham shack.

I hope a collector might want it. Price is negotiable, best offer but please be realistic.

Please feel free to e-mail me at ka2ypt@li.net or phone (516) 277-2198 till 10PM please east coast time. I am located in Islip, Long Island, New York

Thanks for reading and 73 to all de Tony KA2YPT.

A friend has a Crosley Gem Box (ca 1928?), a 6 tube AC AM
broadcast band receiver, that had its power supply cannibalized.
We'd like to know if anyone has a schematic for this radio or a
pointer to who might.

Failing that, if you have one of these, AND if you have the skill
to do it safely, we'd appreciate it if you could measure the
power supply voltages and he can probably wing it from there.
PLEASE, don't kill yourself poking around in there if you're not
comfortable sticking your fingers into powered on radios.

Please reply to: scott@execpc.com

Thanks much -- scott

Took some toys to the UPS depot this AM and they opened up the box to check the packing job. Looks like a standard procedure since late June. They want all carry in packages left open for packing inspection now. Hmmmm. Wonder if that is all UPS depots? No big deal I guess unless you already put a bux worth of tape on the box or had the box strapped up. This was in West Sacramento. Wonder if this is a nation wide practice now?

I sent parcels on three occasions during the past week, here in San Angelo, TX, and I was not asked to open my packages. The people in line in front of me also had sealed packages with no problems.

So, I guess it is a localized situation, or maybe the requirement just has not yet reached the smaller towns.

The depot in Tempe, AZ (near Phoenix) is also doing it. I didn't have a problem with it except that I'd carefully taped up my package (a 312B-4). Actually it might be a good idea. If they inspect it and accept it, I'd expect them to be less likely to blame the packing job in case of damage (well, one can always hope...).

BTW...can anyone recommend a good source for the plastic "peanuts"? I'm gonna be shipping several things in the next few weeks and will need a good supply of them. I tried U-Haul but all they have is the biodegradable ones that don't look like they'd do much good...and they're EXPENSIVE.

73... Mark

Bob, SF-UPS does the same when the shipper appears to be a rank
amateur (not our type). Have you ever watched what some people
walk-in with mangled cartons? They spend another buck+ in
restrapping materials and time. It ticks me off that they
will take this time with a line of people waiting.
I've never had a package in obviously well-packed stuff examined
or opened.

I wish UPS had inspected a box I shipped two weeks ago. It was a pristine Kenwood TS-940AT and a Motorola UHF car telephone. They were packed with small cardboard boxes around the radios, popcorn on top and bottom, frame boxes on top and between them. I paid extra for overweight (that requires special handling, not moved on the conveyer belt!) I paid for $4,500.00 insurance in the event it was lost and had to replace the Kenwood with with a current TS-950. I put (11) ELEVEN "DELICATE INSTUMENT DO NOT DROP"! all over the box. I had the radio face up. When it arrived, the box was broken on the bottom, and the 940 had the back metal frame bent and the fan pushed into the radio. INSPECTOR "BARNEY FIFE" of UPS went to the site for inspection. He quickly anounnced that it was not packed properly and not shipped in a factory carton. They will not pay to repair it. I talked to "BARNEY", and asked him if it could have fallen from a conveyer belt, he said "No, due to the extra weight, it was handled by hand! I asked if so, why didn't someone read at least one of the eleven DELICATE INSTUMENT DO NOT DROP! warning lables. I called the CEO's office and they reffered me to "BARNEYs boss who indicated to me, I'll have to sue them, they will not be paying a penny. I am doing that, at a great inconvenience to me, (It is no longer my radio, but it is up to the shipper). I didn't think UPS was this way. I thought the stuff I saw on the internet was from strictly from the CRY BABIES. I guess I misjudged them. I guess we will continue to use UPS but the more expensive stuff will be FED-X! BEWARE OF UPS and how you pack your stuff!!!
Best Regards, ARTHUR 73 KC6KUK . . .

They did not look at the contents, just poked at the three inches of
bubble wrap and smiled. My pakage looked great on the outside. The
flyer pasted to the UPS door said, ALL packages, no reference to value
etc. Next trip to UPS I'll get a copy of the notice and post it.
Maybe their web site can cough up an explation. I don't have a problem
with the process except on really large double boxed shipments that I
band up and must cut the banding material. Guess I will convert to
the UPS foam pack..less trouble for me and fairly cheap if you count
your time worth 10 cents an hour.

I've only had one claim against UPS and that was for a GRC-106
PA a freight forwarder dropped off the back of a flat bed truck in Japan
right in front of the ham who was anxiously waiting for the delivery.
Landed and despite great packing managed to tweak the frame so bad that
the turns counter shafts and gears were trashed. Amazing that a piece of
war machinery built to survive the battlefield environment could not
take the last 15 paces of a delivery job. HI BTW too nearly 6 months or
more to get the fellow his money. But so goes life in ham radio

HI Art

I can understand your pain and anxiety. If I ship any hi priced stuff,
and that is really doubtful since I don't own any, I would certainly
consider using the UPS foam pack. The UPS gal said that it ranges in
price from a few bux for a small box to a maximum of 15 bux
for their largest sized box HWG. Their largest box if they supply it is
around 6 bux. They will use your box also and they supply the baggy to
put the junk in before they foam it. Won't solve all your problems,
but would certainly put the t..d in their pocket on the insurance side.

I have the following rather large tubes, operating condition unknown:

Taylor T-200
National NL760P (2)
Tung-Sol Chatham 5949A (Thyratron)
Machlett ML-6257
Cetron 300B

I know some of the above tubes are a little pricey new, so make a
reasonable offer.

I have the following 3" CRT's.

2AP1 used/good $10
3AP1 used/good $10
3GP1 used/good $10
3-C1 Continental new $10
3WP1 new (19) $15 (with documentation)
3JP7 Dumont new $15

All of the above CRT's would make good monitor scopes, except the 3JP7
which has a high persistence phosphor.

I can probably find documentation on all of the the above CRT's if
necessary.

All prices plus shipping.

>to see if properly packed, they are really checking for bombs,
>explosives, etc?
>
I suppose that could be part of it but they didn't check to see what was really in the box. In my case it was a Collins 312B-4 but it was wrapped in several layers of bubble wrap and the rest of the box was filled with plastic peanuts. The clerk opened the box and felt around to see that all was secure. She did not unwrap the bubble wrap so there was no way to tell what was actually in there. Then she sealed it back up with more tape than I would have used. Almost the entire box surface was covered with tape. It got to its destination in fine shape, BTW.

Hello Bob,

This has been standard practice where I live for several years. On any item insured over a certain amount they are supposed to check. The counter people probably do it about half the time.

I once shipped some speakers I did not have the original boxes for. I triple boxed them and assembled the box like a Chinese puzzle. They wanted to open the boxes. I refused and told them how it was boxed. They said I couldn't ship it. I asked for the manager. Explained to him how it was boxed and he ok'd it.

So on any expensive item I have the original box for and it is not much of a problem I just leave it open for them to see inside. Of course they have never asked to look when I leave the box open. And then they use their tape to seal it up. Just have to make sure they seal it adequately.

Good luck,
Dennis

I just shipped a hard drive and they opened my box in Everett, WA. Poor guy ahead of me wanted to ship some wine to a state that apparently wasn't allowed. The woman I talked to about it said it was to reduce the likelyhood of damage. When I pressed, she admitted that the fraud was getting pretty bad and they were doing it to reduce the #of claims filed for theft or damage.

From what I understood, UPS finally figured out it was easier to prevent damage then it is to pay for claims. It appears that if you bring in a box that was obviously mispacked, they are supposed to refuse it, and have you repack it. If they do take it, then you can blame the person at the counter and they usually end up paying the claim. I doubt its really a safety issue, since UPS (and Fed Ex for that matter) uses its own trucks, trains, and planes to get stuff cross country, with little chance that someone would get hurt if there was some type of bomb or something in it.

I have two Telrex five element yagis, one for 10 meters and one for 15 meters for sale. Both have been in storage since 1990.

#1 Telrex 10M523- Five element 10 meter yagi on a 23 foot boom
Price is $300

#2 Telrex 15M532- Five element 15 meter yagi on a 32 foot boom
Price is $375

Both of these antennas are the heavy duty commercial style TELREX antennas made in Ausbury Park, New Jersey. Will box and ship by motor freight collect.

In Minneapolis area, I ship quite frequently. If I say radio equipment, they ask is it double boxed. If yes, no problem, if no, how is it packed. They want to know. I send magazines, boxed and taped, no rattles. Accepted no question. The rule seems to be: soft and spongey carton, ask. Sloppy packing and one strip of tape, open and look. Hard carton, NO rattle or movement inside the box (or rattle) no problem. I always use plenty of tape and MAKE sure Nothing rattles or moves in the box. (story time: the other day I was shipping a package and a person was complaining about receiving a BIG package of exhaust parts (missing half the pipes.) The manager told him the packages are moved on a conveyor at moderate speeds. (downhill) This happens about 1 time per 300 miles shipped. If you track a carton, using UPS tracking numbers and their web site, you'll see that indeed, about 5 facilities handle your package in 1000 miles or more. This IS a lot of handling, and each place has a downhill conveyor to the sorting table. His box rattled, and due to the shifting inside of the box, the pipes probably shot out of the end and now they are somewhere, but no one knows what box they came from (or cares). Because of all this high speed handling, it IS important to insure NO MOVEMENT INTERNALLY INSIDE THE BOX. [my 2 cents worth]

For sale GRR-5/R-174 receiver.
This radio was removed from it's crate in 1993 and is in very good cond.
It is manufactured by zenith,serial no 3390.This radio is in original
cond. exept the selenium rectifier in the power supply section had to be
replaced with a bridge rectifier and dropping resistor. The orig. selenium
rectifier is still in the power supply.
This radio works very well receives from 1.5-18 Mc. Powered from 120vac,or
6,or 12,or 24 vdc.
Included with this radio is a orig. manual and non orig. ac and dc power
cables. The price is $425.00 or trade. I am looking for navy receivers.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

Yes, I always have to intervene when UPS clerks start taping my boxes after the "inspection". They don't do it right - box flaps not tight, - and just slapping on tape with tape ends hanging loose etc. I always get on them. Kinda ironic, isn't it.

No ceramic caps. The poly Spragues offer excellent transfer
characteristics at audio frequencies.

Hi-Fi tweaks have been using them as interstage coupling caps for
years. They do sound better.

Now - for those of you who have questioned why I use a screen name instead of a real name - the above is the definitive answer. Thank you, Mr. O'Brien, for so perfectly illustrating why it is extremely advisable to use a screen name on the internet. I really don't want to get to know someone like you "up close and personal."

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter

500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

135. FS: KWM-2A, etc parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-05 00:00:00 UTC
From: "Doran S. Platt" <jeepp@erols.com>
Message-ID: <33BE4EE3.BB1@erols.com>
Source record: 118335

I have cannib. a KWM-2A for cosmetic reasons. Everything worked when dissassembled and I have the following internal parts remaining Note that many of these are interchangable with other S-line units.

70K-2 PTO $45.00
Coil slug rack w/ slugs (complete) $25.00
"KWM-2A" escutcheon $10.00
PI-Net, 2 vari-caps, tapped coil, sw. $10.00
PI-net dial cord & pulley assy $12.00
NPO trimmers (various values) $ 1.50 ea.
Coils (tuning, osc,mix, driver) $ 1.50 ea.
PA RF choke & parisit supp.s $ 5.00
Front panel control pots (all) $ 2.50 ea.
Power sw. assy $10.00
PI-net ceramic trimmers $ 2.00 ea.
Main dial drive shaft & bushing $ 3.00
Rear panel phono plugs (12 ea) $ .50 ea (12/$5.00)
Power connector, repl. w/ring & bypass $ 9.00
Knob, outer (PA and Tune) $ 4.00 ea.
Pointer knob, PA Load $ 3.00
Bandswitch wafers (1 thru 4) $ 2.00 ea.
"A" bank crystal sw. wafer $ 2.00

Complete S-line crystal conversion kit* (have 1 only!) $110.00
(* actually, its a kit-and-a-half.....many extra parts!)
-I also have a bunch of other small mechanical parts that were fallout from the dissassembly. Let me know if I can help.
-NOTE: Everything is negotiable!!!!!

Arthur and other interested folks.

I was told by a fairly high level manager that UPS inspects the packaging because once accepted for carraige, it has been accepted "as packed". That is, they have assumed responsibility for the package.

Keep this in mind when filing your claim.

Still, you are going to have a difficult time if the packaging is not damaged and the contents are.

Message-ID: <33BEF510.B46@copycraft.com>
Source record: 118339

I still have this receiver...apparently it's pretty rare...has 6m and 2m built in; front panel badge reads "VHF". Also have matching speaker. Both are about a 7 or 8 on a 10 point scale...

I'll price it at $175 with the speaker, but would prefer to trade it for something. I was wanting a nice Vibroplex Original Deluxe bug, or a Collins mike, or a Geochron or something like that. Maybe a Collins dummy load, or a 500 watt Bird, or something...I'll add bucks to get something I want.

Thanks and 73's,

Travis N5AY

I'd like to suggest a little different approach. I assume you don't have the model number and that's why you haven't found the schematic. Still, you can identify this chasis by looking through all the 5 tube Crosley layouts in and around 1828. If that doesn't work for you, you can determine the B+ requirements of the set by looking in the RCA tube manual for specs on the tubes employed here. Good luck.

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative >themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.

Date: 1997-07-06 00:00:00 UTC
From: jbyrns@enteract.com
Message-ID: <jbyrns-0607972120230001@abraxas-16.d.enteract.com>
Source record: 118277

Hi All,

I am looking for AM and FM Broadcast Modulation Monitors from the vacuum tube era. I am also looking for operating manuals for these monitors, that may still be in the file cabinet years after the equipment went in the dumpster. Even copies of schematics and related material would help in my study of the development of these devices from the first crude designs, to the more sophisticated designs from the twilight of the vacuum tube era.

I am interested in both AM and FM Monitors, also FM Stereo and SCA Monitors, from manufacturers such as Gates/Harris, GE, RCA, McMartin, Belar, and etc.

Any information on these devices would be appreciated.

Regards,

John Byrns

Two boxes of stuff-great for new ham or restorer who has not acquired
a "junk box"!!!
Box 1--Tubes--more than sixty (maybe 100?) tubes 6v-12v filaments,
miniature 7-9 pin, octal, etc. NOT TV JUNK!! all useful radio, audio,
etc. tubes....60% new, old stock, rest used, most tested. NO INVENTORY
at this price!!! $75 - you won't be disappointed - plus $7.50
shipping.
BOX 2 - junque - mostly of interest to hams or builders. Too much to
list - resistors, caps, variables, coils, switches, hardware, pots,
rheostats, connectors, semis, small transformers, knobs, more,more,
meters, indicator lights, power supply boards, more,more, bargain!!!
$95.00 plus $20 shipping (it's heavy!)
please, I can't possibly inventory this stuff! thanks, Walt
817-387-2050 eves leave message or email. Thanks in advance
P.S. tube box contains no rare audio triodes!

i am using one at the moment for Medium Band DX. It is on borrow from my uncle and is what i used 25 years ago, when i was just starting out. Wolud love to own my own. I need the manual or a copy, would like to know the date it was made, and esp. have the backside explained to me. i dont know where the ground is, and there seems to be two antenna terminals. One is connected to another, and the one next to THOSE seems to be my hookup. HELP !

163. Ranger Question(s)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-06 00:00:00 UTC
From: Terry Brown <browntl@concentric.net>
Message-ID: <33C059D2.5EA@concentric.net>
Source record: 118281

I'm not very familiar with the older transmitters and have just picked up a Viking Ranger. In the manual, it talks about the crystals. What is the purpose of the crystals in this particular transmitter? It did not come with any. Are they necessary for some type of calibration or operation?
Also, what is the zero-beat the manual talks about and how is it accomplished? As you can tell, I got into the hobby in the solid state days and have never operated with anything other than a transceiver.
Any help or suggestions is greatly appreciated.
Terry (KA5IHV)

165. Globe Scout's missing inductor

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-06 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <5pp8du$pnq@news.Hawaii.Edu>
Source record: 118283

Hi folks,
I'm trying to restore a Globe Scout model 65A (160m-10m model).
The inductor L4 (what the manual call the "L matching coil") is
missing. This coil is in series between the two SO-235 antenna
sockets. From the manual's photo, the coil looks to be about
1" diameter, about 3/4" long, and about 15 to 20T (photo is
fuzzy).

If anyone has a 65A, could you please measure the above parameters?
I can wind a replacement coil if I know these specs.

Thanks in advance,
Jeff KH2PZ / KH7

Message-ID: <01bc89c6$282d0420$46d408d0@cougercat.foxinternet.net>
Source record: 118342

I have an AN\PRC 25 and a PRC 77 radio. The 25's receiver seems to be dead compared to commercial standards. Does anybody know just what the sensitivity of this radio should be?

The 77 hops all over the place frequency wise when keyed; but can receive on the same frequency all day without drifting. Any ideas as to why this is happening would be much appreciated.

Thanks

Jeff

From: ret643@aol.com
Message-ID: <5pnrvehcs7078@roadrunner.miracle.net>
Source record: 118351

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

179. FS SR-150 Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-06 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <33BF8AAB.C9C88095@sprynet.com>
Source record: 118353

For Sale: Hallicrafters SR-150 transceiver and PS-150-120 AC power supply/speaker. Covers 80-10 meters, SSB and CW.

In reasonable condition, though by no means collector quality, with the usual Hallicrafters paint chips around the front edge of the cabinet and some scratches on top. Front panel's good with one wear mark below the main tuning knob.

Rig works but has not been "restored"; I've had it on the air over the last few weeks, and made contacts with perfect reports, but if I were going to use it regularly I'd do an alignment and make sure all tubes, etc, were up to snuff. Power supply has had all electrolytics replaced.

Has RIT, unusual for a rig of this vintage. Dual conversion, 18 tubes plus regulator, Claimed sensitivity of 1 microvolt for 20 DB s/n ratio. Built in 100 KC calibrator and QT VOX. Provision for separate receive antenna. CW either manual (with mode switch) or "break in" (with VOX)..

I believe the original price of this was $650 without the supply

I'd like to get $225 for the rig and supply. A photocopy of the manual for both is included. Shipping from Nashua, NH 03060 for about 30 pounds for the rig and 35 for the supply total is extra and I can ship it any way you want.

E-mail or call (603)889-1067.

73 es tnx,
-Pete

181. Easy R390A Audio Mod, Revisited

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-06 00:00:00 UTC
From: nospams@nowhere.com
Message-ID: <33bf92e6.2551650@news-3.exis.net>
Source record: 118355

I found an additional capacitor which the radio benefits from changing. Also, I have gotten a lot of mail asking why disc ceramics should be avoided here. Both are addressed below.

-CR-

Some of you may know that I restore R390A receivers as a hobby. Here is an easy "soft " (reversable) modification which I came up with that really improves the R390A audio by mellowing it out a bit.

The audio tubes, V602A and V603 are coupled with 300V, .01mfd "Vitamin Q" type capacitors. These have been found to leak causing distorted audio. The values are also tend to make the audio amplifier somewhat restrictive.

Changing these to .022 (or even .47 or .5 mfd) 400V (min) Sprague Orangedrops improves bass response and the increased voltage rating coupled with modern construction helps to keep the leaking problem from re-occuring. Do NOT use disc ceramic capacitors! Audio tweaks have been using polystyrene coupling capacitors for years due to their excellent transfer characteristics at audio frequencies. Discs will work albiet with a bit of a sonic difference.

Parts needed:
3- .022mfd @ 400V Sprague Orangdrop Capacitors
1- 560 ohm, 2 Watt resistor

Unplug the receiver and remove the bottom cover. Locate the audio sub chassis (it's on the bottom of the radio and has 5 tubes on it) . Remove the audio chassis by pulling off the 2 modular plugs and loosening the 4 green captive phillips screws. Lift the audio chassis onto an appropriate workspace and turn it upside down.

There is a 2" wide curcuit board which runs 2/3 the long length of the audio chassis. Locate C-601, C-604, C-605 and R-614 which are mounted on
that pc-board. Remove the two screws holding the board to the audio chassis then fold it with the cables off to the side in order to expose the bottom of the board.

Remove C-601, .01 mfd 300v Vitamin Q
Remove C-604, .01 mfd 300v Vitamin Q
Remove C-605 .01 mfd 300v Vitamin Q
Remove R614 560 ohm 1 watt resistor

Replace C-601, 604 and 605 with the orangedrop capacitors. Be sure to first make sure the capacitors do not take up too much vertical space and not allow the audio deck to properly seat in the main chassis. If space is a problem, try mounting the capacitors on the opposite side of the pc board from which they were removed. This is especially true if you use .47's or .5's or when using 600V capacitors.

Replace R614 with the 560 ohm 2 watt resistor.

Replace the PCB, put the audio chassis back in the receiver and re-assemble the radio.

During operation, you will immediately notice that there is a more mellow sound to the receiver. This is due to the increased bass response allowed by the larger value capacitors. If you check the 560 ohm resistor, R614, you will probably see that it has changed value going higher in resistance. I have seen them go to 700-800 ohms.

The receiver can be put totally back to "stock" in a matter of minutes by simply reversing the process.

183. Re: Ranger Question(s)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-07 00:00:00 UTC
From: bb840@scn.org
Message-ID: <ECypnK.A6@scn.org>
Source record: 118208

In a previous article, browntl@concentric.net (Terry Brown) says:

>I'm not very familiar with the older transmitters and have just picked
>up a Viking Ranger. In the manual, it talks about the crystals. What
>is the purpose of the crystals in this particular transmitter? It did
>not come with any. Are they necessary for some type of calibration or
>operation?

The crystal controls the transmit frequency. I believe the Viking Ranger
used either plug in crystals or an external VFO to control the transmit
frequency. If the Ranger has a built in VFO, the crystals are an
alternative method of setting the transmit frequency.

> Also, what is the zero-beat the manual talks about and how is it
>accomplished? As you can tell, I got into the hobby in the solid state
>days and have never operated with anything other than a transceiver.
>Any help or suggestions is greatly appreciated.

Zero-beat is setting your transmit frequency to exactly the same
frequency as the station your responding to, using the spotting control
and a VFO. There are two methods one is to use the spotting control and
VFO to match the tone received on your receiver (but your receiver must
receive only one side band to do this). Another method is to tune the
receiver until the pitch goes so low you no longer here it, then do the
same with the transmitter. Obviously, it's easier and faster to match
the tone. The key is to be on the exact same frequency as the other
station. The ARRL Handbook and Operating Manual will give more information.

Good Luck and enjoy your new toy. 73

I have for sale or trade a very clean Collins set up consisting of a Collins KWS-1 transmitter, serial #750 plus, a Collins 75A-4 receiver with 3.1 filter serial #2800 plus, and a very rare Collins 312A-1 deluxe speaker console. The KWS-1 also has the matching Collins antenna relay with it. Will consider partial trades. Price is $3750

Bryan W5KFT

The receiver has the deluxe tuning knob, the KWS-1 does not.

Selling my collection

1.Hewlett Packard 200CD oscillators, 5 Hz to 600 Khz, Distortion less than 1 percent, typically around 0.3 percent as measured on my HP 334 analyzer. All tubes checked. Power cord all upgraded to 3 wire moulded type, Leather handle in average condition, no broken knobs, front panel in good condition, no scratches on Frequency Dial. No major grunge. Cabinet is clean and no dents or major scratches. This is the table top version not the rack mounted version. $100 Plus UPS on 20 lbs

2. Hewlett Packard 200CDR, same as above except rack mount version. $75 plus ups on 20 lbs

3. Hewlett Packard 201CD, simular to bench top 200CD except range is a few hz to 20 Khz and it includes a precision step attenuator in addition to continuously variable type as found on the 200CD Good condition, $60 plus UPS on 20 lbs

4. Hewlett packard 400L RMS meter, 4 Mhz, Mirrored taunt band scale meter with Linear DB markings. Good condition, $60 plus ups on 15 lbs

5. Hewlett Packard, 302A wave analyzer, few hz to 50,000 hz, 3 hz bandwidth, resolution in the microvolt range, solid state, excellent condition, tracking oscillator feature, Kinda large, but not too heavy. $75 plus UPS on 30 lbs

Thank you for the read

191. Collins 75S3B question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-07 00:00:00 UTC
From: Dan Newby <newbyd@ipix.com>
Message-ID: <33C14BE0.375A@ipix.com>
Source record: 118216

I have a 75S3B that as I tune up in frequency with the PTO, the reciever sensitivty falls off. I have gone thru the, as the manual puts it, RF alignment, and that had no effect, although the over all sensitivity was increased.

Is this a typical for this reciever? If so, did Collins put out a service bulletin to improve on this problem?

I would appreciate any info I can get about this.

Thanks,

Dan Newby

Ohhh, these people are recognized in the industry. They've been
in business for years. And their references? Well......

This is the infamous Woodside agency that has been plaguing writers
with their "reading fee" scam for years, and was recently involved
in an alleged Internet stalking incident.

Here's the URL for the inside story on the Woodside scandal.
Go to this site for all the details:

http://www.geocities.com/~hitchcockc/story.html

You can probably find tons-o-stuff about Woodside in Deja News, in
the archives for misc.writing. And I believe Woodside is also
mentioned in the misc.writing FAQ.

You want to stay away from these people!

199. TS-830 Freq Jump

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-07 00:00:00 UTC
From: wormser@osiris.cso.uiuc.edu
Message-ID: <868324320.6130@dejanews.com>
Source record: 118224
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Hi Dave,
You never addressed the question of rebuilding a broken microprocessor-
controlled rig aboard a heaving ship during a violent hull-bending storm.
Surely you've been in a storm where some steel plates have caved in, yes?

When safety at sea is the issue, simple reliable systems "...are better ways"
- and *the* most simple and reliable system is MF/HF CW.

>73s Dave Riley, Retired SPARKS...

"73s"??? Never heard that on the maritime bands. You sure you're a retired
sparks? Mind telling us what vessels you worked on?

73,
Jeff KH2PZ (former 500kc CW op at NMO)

205. Re: UPS Inspection

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-07 00:00:00 UTC
From: Mark Gulbrandsen <film4wrk@inil.com>
Message-ID: <01bc8a80$f1fa7020$29201fce@film4wrk>
Source record: 118285
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.marketplace

Beware of Fed-Ex as well. I have had disastrous results from them in the last two years and as recently as this weekend. Three times past they damaged the goods shipped. Two being a very important shipment to location filming sites. The third time they trashed an Arriflex film camera to the tune of over $4,000.00! Yes they did pay the claim on all, but the inconvenience at both ends was a bit too much. This past Thursday they forgot to drop off a COD package. I did get one other Fed-EX package that same day though, even though the driver claims he tried to drop off the COD package, the 3 other people in the office never saw him attempt to. So I got on the phone at 4:30 and let them know that I was really ticked off and that I wanted them to get it here pronto. The best that I could get was Saturday delivery and the expense of having to wait for them for 3 hours on a holiday weekend. Yes, I did close my Fed-Ex account after the film Camera damage thing.
I think the best bet would be to check out Airborn or some other Air shipment co, I have used Delta Air Freight and Mk7 out of Seattle with great success. If you do an economy shipment with them, it can sometimes work out to cost less than with UPS, or motor freight.
Regards,
Mark Gulbrandsen

CUT HERE - - - - - - - - - - - - - - -

TO: alex.hood@BELLSOUTH.COM

CC: mike_richards@BSCC.BLS.COM
root@BELLSOUTH.COM
admin@BELLSOUTH.COM

I am sending you this e-mail as a complaint against one of your
Internet customers. Mr. James O'brien (KD4CDB@BELLSOUTH.COM)
has posted literally hundreds of threatening, off-topic, and off-color
diatribes to rec.radio.swap and rec.radio.amateur.boatanchors over the course
of the past few weeks. A check of the DejaNews database will confirm this.
I pay for my time on line and each message that I download costs me
time and money. Mr. O'briens postings have absolutely nothing to do with
the barter or sale of radio equipment, and ,as such, do not conform to
the original charter of the newsgroups mentioned. Mr. O'brien has been
requested to bring his postings back "on topic" or find another forum.
To date, he has not only been unwilling to comply, but has answered each
request with more malicious and spiteful postings accompanied by some
threats of physical violence. I find the postings of Mr. O'brien to be
offensive, and I should not be required to download this material.
Unfortunately my newsreader (Forte Free Agent) does not allow me the
luxury of filtering his postings. I send you this message in the hope
that you will be able to succeed with Mr. O'brien where the rest of us
have failed. If you can't get him to change his style, then please
deny him the resources that enable him to make things difficult for
those of us who are willing to abide by the intent and charter of
these newsgroups.

Sincerely,

[your name]

CUT HERE ------------------------------

Thanks for your help with this! If we join forces, we can make it
very difficult for Mr. Obrien to continue down his selfishly
chosen path.

I would like to purchase an 8056 Nuvistor (preferably new). If anybody knows of a supplier, please let me know by e-mail. I don't believe they are manufactured any more.

Marty Mlynarik

Complaining to Mr. OBrien's ISP serves little if any purpose. Even if the current ISP cancels the account, another ISP is just a phone call away. This will only exacerbate the situation.

My suggestion is to upgrade to a newsreader with filtering)Forte's Agent serves the purpose extremely well). Plonk Mr. OBrien and you will find its a beautiful thing ;)

Thanks for all the info. i actually understood some of it. so the antenna lead connected to the ground serves no purpose at this date ? My longwire out the window connected to a1 is doing the trick, but I'm always looking for improvements. heres what the back looks like, looking from left to right. And now that i looked again, what you are saying is lining up. First I have A2 which is written in pencil above it, connected by a small wire to the ground, which has a symbol above it that looks like an upside down Xmas tree. Then is A1. Then is two sets of connections which i understand to be speaker leads, (because they are 'ohms' which i do not use, using headphones around front. The comes the mystery connections, two set screws with "EX SW" which i take to mean external anrtenna, shortwave. Am i correct ? Whats the diff 'tween a1 and these leads ?
The mystery knobs on the front say CRYSTAL PHASING and BFO INJECTION. Also, PITCH CONTROL seems to do nothing, and RF GAIN seems to be more like a volume control. Another letter, please. To aid your understanding, the unit also has a recieve/send switch, but I'm at a loss how anyone ever sent when all the controls seem designed to receive. thanks. For example, where did the micrphone go ?

The Ranger has a built in front panel VFO. You can switch to xtal
control from the front panel. This was so a Novice Class Amateur could
buy the rig and then when they upgraded to General Class use the VFO.

Here in the Twin Cities at the main depot where I ship from, they
usually inspect the contents to make sure that it is packed properly.
I think UPS is trying to eliminate later damage claims.

One time when I recently shipped something, there was a new twist: UPS
will "sell" you extra packing material. I had a unit packed well in
the original box and the person at the counter looked in it and said
that I neede
d some additional protection. The person then went away and came back
with a tiny thin sheet of plastic, probably worth about 10-25 cents and
set it in the box and taped it up. I am sure the added plastic offered
no add
itional protection. When they totalled my bill, I was charged $2.25
for "additional packing materials!"

John

Actually, having worked for UPS [1] it isn't (at least locally) for terrorists. The problem is that they have been trying to reduce the amount of money that they spend on claims and/or lost packages. I think the amount that they were losing to that was close to the GNP of some small countries.

Live and learn, I guess.. ;)

The Ranger has a built in VFO, so the crystals are not required.
However, be warned, since you are used to using a newer solid state
radios, the VFO in your Ranger will drift. If this bothers you, get the
crystals.

248. HELP!! NEC pagers (Cyrillic) WANTED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-08 00:00:00 UTC
From: "D.Ivanov" <divanov@dol.ru>
Message-ID: <01bc8b97$93a025c0$aa1f57c2@ppm-comm>
Source record: 118238
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January 1994. Our business - trade. We have a number of branches in different countries. We employ Russian-speaking staff there. We use office alpha-numeric paging system to organise its work. We would like to buy NEC paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and, possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please, send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov
Multi-Communication

> http://www.dejanews.com/ Search, Read, Post to UsenetHi Alan,

You've done pretty well for a newbie!
Although I have not seen this problem in a Kenwood, I have seen it in
Icom and Yaesu- both with the same cause- small single turn variable
caps. In case of the Yaesu it was a frequency netting cap on a
heterodyne oscillator- drove me nuts. It occurred randomly and never
when I had the rig open. A hint from another ham sent me looking in that
direction. Replaced 2 or 3 and that was the end of it. Hope this helps.

Dear fellow newsgroup readers:

If you have been monitoring rec.radio.swap and
rec.radio.amateur.boatanchors for the past 3 weeks
or so, then I am sure that you are aware of what has been going
on with a Mr. James Obrien (KD4CDB@BELLSOUTH.NET) and his postings
to that newsgroup. Now, a few flames here and there can be
expected on the newsgroups, but his actions have gone well
beyond any normal boundaries. I have contacted his ISP in an
attempt to have his account terminated. I hope you will do the same.
He has threatened folks with bodily harm, and has needlessly clogged
a newsgroup that, by its very charter, was designed for the buying and
selling of radio equipment. Please join with me and contact his ISP and
register your complaint. Here is the latest information from one of
the WHOIS servers:

[rs.internic.net]
BellSouth Telecommunications (BELLSOUTH2-DOM)
E8B1 3535 Colonnade Parkway
Birmingham, Alabama 35243

Domain Name: BELLSOUTH.COM

Administrative Contact:
Hood, Alex (AH183) alex.hood@BELLSOUTH.COM
(205)-977-5892
Technical Contact, Zone Contact:
Richards, K Michael (KMR2) mike_richards@BSCC.BLS.COM
770-604-6422 (FAX) 770-604-6879

Record last updated on 08-Jan-97.
Record created on 12-Apr-95.
Database last updated on 6-Jul-97 15:34:09 EDT.

Domain servers in listed order:

NS1.IWEB.NET 155.229.39.1
NS2.IWEB.NET 155.229.39.3

The InterNIC Registration Services Host contains ONLY Internet
Information
(Networks, ASN's, Domains, and POC's).
Please use the whois server at nic.ddn.mil for MILNET Information.

I have included a "sample" letter that you may feel free to
use in your complaint to Mr. Obrien's ISP.

CUT HERE - - - - - - - - - - - - - - -

TO: alex.hood@BELLSOUTH.COM

CC: mike_richards@BSCC.BLS.COM
root@BELLSOUTH.COM
admin@BELLSOUTH.COM

I am sending you this e-mail as a complaint against one of your
Internet customers. Mr. James O'brien (KD4CDB@BELLSOUTH.COM)
has posted literally hundreds of threatening, off-topic, and off-color
diatribes to rec.radio.swap and rec.radio.amateur.boatanchors over the course
of the past few weeks. A check of the DejaNews database will confirm this.
I pay for my time on line and each message that I download costs me
time and money. Mr. O'briens postings have absolutely nothing to do with
the barter or sale of radio equipment, and ,as such, do not conform to
the original charter of the newsgroups mentioned. Mr. O'brien has been
requested to bring his postings back "on topic" or find another forum.
To date, he has not only been unwilling to comply, but has answered each
request with more malicious and spiteful postings accompanied by some
threats of physical violence. I find the postings of Mr. O'brien to be
offensive, and I should not be required to download this material.
Unfortunately my newsreader does not allow me the
luxury of filtering his postings. I send you this message in the hope
that you will be able to succeed with Mr. O'brien where the rest of us
have failed. If you can't get him to change his style, then please
deny him the resources that enable him to make things difficult for
those of us who are willing to abide by the intent and charter of
these newsgroups.

Sincerely,

[your name]

CUT HERE ------------------------------

Thanks for your help with this! If we join forces, we can make it
very difficult for Mr. Obrien to continue down his selfishly
chosen path.

258. Schematics needed A and B supplies

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-08 00:00:00 UTC
From: gpewitt@execpc.com
Message-ID: <NEWTNews.868388663.21460.gpewitt@execpc.com.execpc.com>
Source record: 118248
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.
One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

Standard practice for general coverage receivers of the day was to allow both single-ended and dipole antennae hookup; if you were to use a balanced feedline to a dipole (say, for example, the 300-ohm twin lead we used to use before the advent of cable and DSS tele-vision), you would remove that jumper and use A1 and A2 to each side of the feedline. If you connect a long-wire instead, you put the jumper in place between A2 and ground and connect the antenna to A1.

If you do not have instructions for the radio and/or the markings for the terminals are obscured or not readable, you can figure out which is which by removing the bottom panel or the cabinet of the radio (whichever allows you to see the inside of the chassis)... one of the three terminals will be tied right to a solder lug on the chassis; this is obviously your ground. From there, A2 is the closer of the two remaining lugs (so the jumper reaches between both it and ground), and A1 is the one left over.

Probably sufficient for general reception to leave the ground connection be, and just have it find ground through the AC line. If the AC plug is not polarized and can be reversed in the outlet, BE CAREFUL that you get it in the correct way (the reverse can get you a good poke from the chassis on some radios if you're not careful). You should also be able to determine which side is which here by examining the wiring of the AC cord, with the cord DISCON-NECTED.

C.K. (been there, done that -- ouch!)

That's a pretty thorough job you did! It's a common problem - I had it too - and is due to poor grounding on the AF board whoich also carries the main voltage regulators for the whole rig. The Kenwood recommended solution is to insert extra-vicious star washers under each of the ground pillars.

Some people suggest a separate ground lug to a new hole in the chassis, but the simple solution worked for me.

You can certainly find out more about this and other modifications by searching both the Web and Usenet for "TS-830".

Fred,

I think you should have checked your back side on that one. Almost all damage is shock damage, that's what all the packing requirements are there to miminise. I have found that if they accept the package and its contents and further bless the packing system then they have bought the merchandise if they screw it up. I have been lucky, but who knows when that will run out. I may start using the UPS versapack system just to put the t..rd in their pocket for good.. besides the versapack is probably cheaper than wasting my own time and weak back packing boat anchors. I could be wront..and I'll let you all know how the versapack works for me.

I hope I'm not going too far afield with this (radio wise) but I've got a functional Narco DME-190 removed from my PA-28-180 last fall to make space for a GPS. I have the mtg tray, connectors, and the factory maintenance manual. I will also include a spare '190 for parts (yes.. the indicator lights have already been pulled out) $150 and I'll pay to ship it. Repeat... it was working perfectly the day we begrudgingly pulled it! Jeep K3HVG

I have used it, received an R-390a that had been VersaPacked. About 85 lbs, can't get much more boat-anchorish than that. Worked fine.

> Terry (KA5IHV)

Terry, you use the crystals instead of the VFO for when you want to
stay on a fixed frequency with very high stability and no drift.
Useful for finding the right spot quickly too!

You can get crystals from a variety of sources. E-mail me if you want
to know.

Zero-beat refers to getting on the exact same spot as the station you
are calling by listening to BOTH signals in your receiver. For a
complete description see any ARRL Handbook from about 1950-1968!

A great transmitter there. I have one also here!

Source record: 118181

This is being posted for a friend who does not have Internet access. Call him, but PLEASE DO NOT email me with a bunch of questions I can't answer.

Vern Thompson, W6ZJU, used to own and operate KBBV/KTOT in Big Bear Lake, CA. and now has a bunch of old broadcast stuff he is selling off. One of the more attractive pieces is a Gates AM transmitter for which he wants $750. Can't begin to list all the other neat old broadcast stuff that he has laying around. He used to be an engineer for NBC before starting Mountain Broadcasting Company and was involved in the early years of color TV.

His telephone number is 909-866-2434. Best reached during the evenings.

Message-ID: <PaSGXMAcOywzEwU6@brimar.demon.co.uk>
Source record: 118182

*** New Mailing List *** UK-Vintage-Radio

The mailing list UK-Vintage-Radio is designed to promote the
interchange of information between collectors of (mainly) British
broadcast and communications radio sets.
It is meant to complement, rather than compete, with other
lists/Newsgroups of a similar nature.

Topics for discussion:-

* Collecting, refurbishing, storing.
* Sources of materials and components.
* Technical queries and discussions.
* Wanted & For-Sale.
* News of forthcoming events.
* Service information.
* Books and Publications.
* Societies, Museums info.
* W.H.Y.

It is intended to archive all submissions to the list to allow future
reference to be made to articles previously posted.

TO SUBSCRIBE (or UN-SUBSCRIBE) to/from the mailing list,

Email to: uk-vintage-radio-request@webaware.co.uk

stating your requirement in the main body of text.

It is hoped that this facility will be of use to those who collect and
refurbish old radio sets, either broadcast or comms.

I am sure there is a niche for such a list. It's a pity that many who
collect vintage radios will not, as yet, have Email facilities.

The list will be as strong as its contributors, so please feel free to
subscribe. It is hoped that it will provide a vehicle for sourcing
service information, manuals, and spares, also a good place for
technical discussion, hints and tips etc. Best of all, it's FREE!

From: David Siders <DavidSiders@worldnet.att.net>
Message-ID: <33C36061.71CF@worldnet.att.net>
Source record: 118189

I have a National NC-125 broadband receiver for sale, circa 1955.
It's in very good condition, except for a few minor flaws in the paint
and a non-operational S-meter (the tubes test OK.) It's been in storage
for the last 17 years. I have the original manual, complete with
schematic and coffee stains. The first reasonable offer will save it
from the landfill. For reference, I'm located in the San Francisco
bay area.

I have two 19" wide equipment racks which I will give to anyone who wants them. The first measures 34" high by 21.5" deep and is painted battleship grey (Navy surplus.) The second is a table-top model, measuring 16.5" high by 25" deep and includes two sets (pair) of drawer slides. Shipping is not practical, due to the weight involved, so this offer is limited to those living within driving distance of southern Alameda county, in the San Francisco Bay area.

295. What Matches What???

Just acquired a National speaker in a trade. It's abt 15" wide, 11" high and 10" deep. Kinda art-deco looking, National Grey with 2 Narrow Chrome bands around it. Stands on four very short pedestals. Only the center 8" of the front is covered with fabric. Anybody know what this was meant to match?

Thanks
Dan

Message-ID: <5q020b$2if@sf18.dseg.ti.com>
Source record: 118193
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale or trade:

Johnson Viking II transmitter with manual (complete photocopy). Appears to be all there, no obvious mods or fried parts, does not smell like anything's burnt up. I bought it at a swap meet with the intention of bringing it to life, but I have too many other projects, so this one's gotta go. I have not tested it, so consider it to be a project rig. Offered AS-IS, with manual.

I'm asking $75 for it, but I'm open to offers. I would also consider trading the Viking II plus cash for a beginner's HF rig of some sort. We have a lot of "newbies" in our area that need starter rigs, and I've been buying rigs, getting them going, and selling them to the newcomers for what I have in them, just to get the new folks on the air.

PICK UP ONLY, in Dallas / Fort Worth area. I will NOT ship it!

Hi all,

My homepage is getting bigger and will continue to do so until Telenordia tell me I have run out of disk space on the server. I am currently building an HF bands general coverage receiver using valves. When I can get a 'round-twit' I will be posting this as well as the others listed below. I will present it in several logical stages, each of which is a complete project in its own right.

You can find my homepage at:

http://user.tninet.se/~acz732k/

I make no apologies for the NO.ONE@NO.NAME address. My address is freely available on my homepage - I just don't want all the adverts and junk mail that goes with a correct address.

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)

250mW HF bands CW TX
4 watt PA for 250mW HF bands CW TX
5 watt CW IC TX
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V=E4sby.

Hi Terry... What has been said about zeroing is correct... I just thought it could be made a little more clear... you are putting your transmitter's frequency exactly on the other guy's freq... at least, that's the plan... in reality, with separate transmitter & rcvr you can hear yourself using that spotting switch... that is what it does: transmits a greatly reduced signal so that you can hear both your own signal and the other guy's. "Zero beat" means essentially 'right on frequency' . Literally: the two signals 'beat' against each other, producing a small difference tone called a 'beat' frequency... it is the literal difference between the two... as you approach the same freq, the tone decreases to the point of non-existence as far as your ears are concerned, hence: zero beat.

If you are using a wide filter, you may often hear BOTH sides of zero beat, but usually, with CW filters, all you will hear is one side. You ccan still hear all the way down to zero however, so it doesn't matter-as long as you are aware the other side is there, just filtered out.

By the way, since you can no longer hear the station when you have tuned your rcvr to his zero beat, you normally tune off his frequency slightly-by the amount of cycles (OK: Hertz) you are most comfortable listening to... usually somewhere between 400 & 1000 Hz... this is the 'OFFSET' you may hear about.

Hope this helps.

304. Re: UPS Inspection

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-09 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <5q0iq1$8s7@epx.cis.umn.edu>
Source record: 118200
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

UPS packing tips:

(*)
"Fragile" stickers are useless. Their people handle 100's of packages per hour and can't be expected to look over each package. Also the automated handling machinery can't read at all. Assume your package is going to be thrown across the room several times by angry gorillas.

(*) Assume your package is going to be at the bottom of a stack of other people's boatanchors, stacked 10 high, and bounced over 4 inch bumps.. You can't assume your package is going to be sitting on top. You should pack appropriately. Any surface that can't take 300 lbs per square foot has to be adequately braced. Assume the radio is going to be shipped face down. A good reality check is: can I jump on any side of this package all day long and not break anything? If not, you didnt pack well enough.

(*) Assume anything very heavy is going to be dropped several times, and pack accordingly. The shippers try to minimize changes in height, but some are unavoidable. Think it through: if you worked for them and had to lower a 60 lb package from a shelf to the floor, would you risk your back by gently lowering it, or would you just drop it?

(*) "Peanuts" are not very good for packing heavy things. They tend to compress and shift around, leaving whole sides unprotected.

(*) Anything that sticks out is going to take the brunt of the bumps. Knobs, connectors, banana plugs, fuse sockets,
all tend to get broken off or pushed in. The best protection is a box that is a few inches bigger than the item, stuffed with tightly crumpled newspaper, inside another box with several inches all around, similarly tightly packed with paper.

(*) Read the fine print on any insurance you buy. Note what is being insured, what the limits are. Don't believe a single spoken promise. The shippers are trained to be honest, but will tend to fudge things just to move things along.

I'm looking for the service and/or operator manuals for a Clegg FM-DX 2m radio.

The radio came into my hands without a mike. There are only two wires where the mike was! In lieu of a manual does anyone happen to know what these wires are and if there are more wires used? If you have a service manual I'd be more than willing to pay for copying/shipping costs.

This rig also has the LED burnout "problem" - is there a Radio Shack part number for these LEDs?

Thanks for any help!!!!

I have a Hallicrafters HT-6 transmitter with no coils. If you have some in your junk box, I'd like to buy them. The oscillator coils are in grey metal cans about 1-1/2 x 1-1/2 x 3-1/4 inches with a 4-pin plug on the bottom and an old Hallicrafters know on a shaft extending out the top. The tank coils are link coupled with the coil axis vertical wound on a form with a 4-pin plug in the base. I'd like to find some coils and get this old transmitter running.
Thanks for your help.

From: nuvistor@aol.com
Message-ID: <19970710022700.WAA13832@ladder02.news.aol.com>
Source record: 118015

I currently have for sale several shortwave receivers of the following types:
1- R390A - $225 u-ship
1- R392 - $200 u-ship

I also have quite a bit of Korean War vintage FM equipment covering from 20Mhz to 58Mhz.(Power supplies, receivers, receiver-transmitters, re-transmission units, vehicular mounts etc. for various GRC, VRC, and VRQ configurations. Let me know what you want.
I also have some very new, very pristine examples of some Israeli tactical manpack sets very similar to the U.S. PRC-77. These units are functionally identical exept for a narrower channel spacing of only 25kHz.

If anyone is interested please e-mail to nuvistor@aol.com
I would be interested in trading these items for 2M and 70cm equipment multimode radios, antennas and such. Tell me what you have and I'll tell you what I have.
Here's a mostly complete list of the other stuff I still have.

RT-68 38-54.9Mhz 2W lo 18W hi cont. tuneable $65
RT-67 28-38.9 " " " " " "
$65
RT-66 20-28.9 " " " " " "
$65

PP-112 power supply 24VDC p.s. for above xceivers. Supplies all operating voltages from 24vdc 6.5A input $15

PP-1175A 115vac power supply for above xceivers. Supplies all voltages
req.byRT units as well as auxiliary 6.3vdc & 135vdc out. $85

R-110 receiver 38-54.9Mhz cont.tuneable receiver w/squelch $45
R-109 " 27-38.9Mhz " " " "
$45
R-108 " 20-28.9Mhz " " " "
$45

PP-282 power supply for above receivers(mounts internally) $15

PRC-10 backpack tranceiver .9W 38-54.9mhz tuneable $45
PRC-9 " " " 27-38.9mhz "
$45
PRC-8 " " " 20-27.9mhz "
$45
also the Canadian versions of the backpack radios as well as the American "A" models

PRC-6 Walkie talkie 275mW single channel crystal controlled
as well as the 6 channel Canadian version US
$22.50

Can. $20
also have the channel Alignment Indicators for them if needed

Now for the new stuff. These radios are the functional equivalent of an
American
PRC-77 The frequency range is from 30mhz to 75.975mhz in two bands with
the provision for two mechanical preset freqs.They work with a sub-audible
tone squelch and depending on the individual radio they have a power out
of
1.1W to 2.25W The only functional difference from these radios is the
channel spacing.American units have 50kc spacing, where as these units
have 25kc.
They are made by Tadiran of Israel and are of current manufacture.
The Korean war stuff Iwould call "good condition" (totally complete not
abused
but not operationally checked)wheras the new stuff I'd call "very good to
exellent" (I use the stuff and it works well)

If you need more info or are interested in any of this just let me know.
Maybe we could trade something, who knows...

Notice how Jimmie is cleaning up his act. He is TRUELY running scared,
just like a third grade playground bully. No more threats, and thank God,
no more long dissertations about other guy's "balls."

He has also been pretty busy cancelling the messages that illustrate his
worst behavior. Guess he doesn't know that they are still accessible
within DejaNews.

And now, get this, he's complaining to other folk's ISP's that he is an
"innocent victim." The big bad bully *always* tells mommie he is being
picked on.

He is so delusional he thinks someone actually CARES !

Pat,

When you post the URL in a NG, it is my understanding that if you put the whole thing in the text; e.g.

http://www.stf-electronics.com

it will come up as an executable (Thunk and you're there!) or save. Otherwise, you might lose a few of us lazier surfers.

Cheers es 73, Dave K7HMP

323. Help ID National HRO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-10 00:00:00 UTC
From: Michael Tracy <mtracy@arrl.org>
Message-ID: <33C4FF0D.3441@arrl.org>
Source record: 118024

Hello! I have a National HRO that I am trying to find more information on. It is a bit unusual as HROs go, in that:

1. It is a rack mount (5 screw slots per side).
2. The panel and dial are both gray.
3. The name plate is above the dial, rather than at the top right.
4. The selectivity control is a bar knob, but it has no skirt.

It has the original HRO tube compliment, so I know it isn't an HRO-5 or later version. The "AGC/MGC" and power switches are standard toggles and the labeling is on the panel (ie., there is no circular metal label as with the HRO-5).

It seems to have been modified (the meters don't appear to be original but the toggle switches and panel lettering next to the meters are), but I think it is mostly original.

Can you provide any help on the year and specific model of this critter? Have any suggestions on where to look for more information?

73, Michael Tracy, KC1SX (email mtracy@arrl.org)

Remember the old lesson, Jeff.
Never argue with the ignorant.
Nothing to be gained. The loonies own the keys
to the nut house now, and they are going to make
policy that fits their prejudices. When enough
people die and the loonies run out of money,
you might see a return to simple, common sense.

The Sams Photofact packet number is 61-12. Sometimes you can find these
in public libraries, and that is where I would start looking.

Source record: 118058

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT

REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

360. FS Roller inductor tuner parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-11 00:00:00 UTC
From: walt@jove.acs.unt.edu
Message-ID: <868679173.4002@dejanews.com>
Source record: 118061
Cross-posted to: rec.radio.swap,rec.radio.amateur.antennas,rec.radio.amateur.boatanchors

FS beautiful ceramic and silver roller inductor, approx 2 1/4 x8 inches
about 25-30 max uh - and several variable caps 150-180 pf max with
spacing good for about 800 watts or so for building tuners. also
include some ceramic fixed (tapped) inductors for tuner or amplifier
tank. also includes 4:1 balun wound on 2 1/2 inch ferrite core
also good for near legal limit. I have two tuners and don't really
need to build more!!! with turns counter that matches roller inductor
(35 turn) and coupler/hardware. includes box for L-network (not big
enough for T-circuit) have more than $80 invested, sell for $70 shipped
CONUS.... roller inductor alone would cost WAY more than this...it's
not cheap crap like they use in $300 tuners nowdays!
BOX of misc. tubes - NOT TV junk, too many to list/inventory, but
useful stuff for radio, building, etc. about 100 tubes, half new,
most others tested from my stock when I was collecting them, $60
shipped CONUS.
Thanks, Walt WB5LJW pse email

I have an extra TV-7D tube tester. Works fine. Cabinet and cover are scruffy but panel is very good. No adapters (needed only for light-house tubes etc.), no manual, but I can make a copy of mine. Asking $100 + UPS
Thanks, John, KU6X

363. FS: selling off original manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-12 00:00:00 UTC
From: hammarlund@jacksonmi.com
Message-ID: <33c9dab4.36288084@207.126.101.81>
Source record: 118064

Hi all'
I have decided to sell off all my manuals that due not pertain to
Hammarlund. At my web site click the Halli icon, & or the BA red icon
to see all that i want to sell. the catch is...(you knew there'd be one..)i want
to sell the Halli's as one lot, and the same for the 'BA' page...
Asking $1,000 for all my Halli manuals...shipped
and taking serious offers on the BA page manuals...I have always felt i
priced my manuals *very* competively..and tried to offer the utmost in
quality...But, need to narrow my vision to just Hammarlund....
before you judge the price or make an offer..go look at what all is
there....then decide...
Thank you, to the *many* who have bought or traded for manuals in the
past...I will still be here for the Hammarlund people...

Best Regards

The mods were re-published in Electric Radio some time ago. This came
from Bob ex W2VCZ. Can't speak to the other but Bob and I competed
against each other in contests years ago and he was a (is) agreat
operator. He knows the A4 as well as anyone.

I ran into this at an estate sale and it got the better of me. It appears to be identical to the SP-400/ BC-779 type of radio but the tag on the front with the numbers also says "Modified by American Television Labs, Chicago.
Anyone ever see one of these?What modifications? The power trans. in the thing is the biggest I have seen. The power supply has a rack front the same size as the radio.

Charlie.

This is a pretty good deal since the TV-7Ds are going for $125 -150 these
days. I'd recommend that the buyer consider sending it to Dan Nelson in
Phoenix for a full calibration.

Yes indeed, Collins did make a manual ATU - the 180S-1 - and it is an excellent piece of equipment. Check QST April & May 1995 and read Frank Witt, AI1H's informative article on the subject of antenna tuners.

Another project from the W1RC depository.....

This unit is missing the vacuum variable, three tuning knobs,
banana plug jack bars and the screw posts.

The cabinet St James Gray paint is in excellent condition and
the unit is clean inside as well.

Price is $50.00 (or highest offer) plus UPS.

These are the small metal plates that are attached to the front panel of
R390-A
Radios. These are a hard to find item as the military remove them before
the
equipment is released for salvage.
I have a small quantity available in several different varieties.
They are not cheap as they are rare and getting rarer. Anyone interested
please e-mail me at

Randy,

If you go to the webpage listed below you will find a lot of information regarding the R4C. I don't remember whether they address this specific problem or not but its worth reading anyway. Look for the Drake mods list at this site.

Hi tube fans
if your in the Jackson Mi. area..and nothing to do this Sunday..
Stop bye and visit..and see if i might have that part, ect. you've been
looking for..I want to clean out alot of the stuff in my shack..and
looking and seeing is better than a description on a screen..
no reasonable offer refused....it's Ham Fest Sunday no admission fee,
plenty of free parking...and a hand shake & smile are waiting...
I'm just off the I-94 US-127 North junction..exit 138...
help me thin down..and say HI! 8-)

396. 4 Radios 4-Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-13 00:00:00 UTC
From: sbrady@pce.net
Message-ID: <33c81d32.2501876@news.pce.net>
Source record: 118097

Heathkit Radios for sale!

I have four (4) radios for sale. Two are close to
working, 2 I havn't been able to get anything to happen.

SB-101 All tubes. Cosmetically good. 400 kc CW filter.

SB-101 All tubes. Very clean. 400 kc CW filter
Some audio & Receive. No Xmit.
I think this one just needs a good tune-up.

HW-101 All tubes. Very clean. 400 kc CW filter.
Receives but need tuning.
Transmits but needs tuning.
This may be the best one of the bunch.

HW-101 Most tubes. Seen better days. No filter
Havn't even tried to get this one going.

One HP-23 and Two HP23A power supplies.

Box of spare LMO's, feet, dial parts, tubes, etc.

I'm selling all of above as package for $100.00 plus
shipping. The CW filters I know alone have been going
for $40-$50 each on the used market.

If intrested, please contact Shane, WB2WPM at:

(716) 675-5797
or sbrady@pce.net
or wb2wpm @ke2vw.#wny.ny.usa.na

I'm located outside of Buffalo, New York.

If your a fixer-upper and good with tubes radio's I
know you'll be able to get 2 of these up and running
in no time. The other 2 maybe too.

Thanks for reading, and hope to hear from you.

73, Shane WB2WPM

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Looking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

407. SACMARC Organizing SAC Museum Amateur Radio Exhibit in 1998

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-13 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <33c92bf7.0@newscene>
Source record: 118108
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors,alt.military.cadet,soc.veterans,sci.military

The Strategic Air Command Memorial Amateur Radio Club has the fortuitous opportunity to exhibit at the new, enlarged SAC Museum near Ashland, Nebraska sometime early next year (based on feedback from SAC Museum Registrar Fred Poyner). Amateurs who have read the May QST article "Once Again, A Ham Operator in Command" know that there is a significant amount of history behind, and a long-standing positive relationship between, amateur radio and military communications, particularly within the Strategic Air Command. The influences of General Curtis E. LeMay (K0GRL, W6EZV) in inserting superior amateur radio technologies (such as Single Sideband) into SAC communications systems are almost legendary.

We are pursuing contacts through USAF historical agencies, local SAC organizations, and Rockwell Collins (formerly Collins Radio). We are also actively seeking loans or donations of military radio equipment, historical documentation, and even personal historical accounts (oral or written) of those who remember General LeMay, 1950's era SAC communications systems (including USAF MARS), or even amateur radio station K0AIR at Offutt AFB.

Individuals who have specific contributions or referrals in mind should contact either Paul Schleck, K3FU, at (402) 291-6176 or pschleck@novia.net, or Steve Hunt, KB0MYH, at (402) 291-9253 or shunt23877@aol.com. You may also write the SACMARC at P.O. Box 1292, Bellevue, NE 68005-1292.

For more information about the SACMARC and its activities, check out our WWW Home Page:

http://www.novia.net/~pschleck/sacmarc/

408. WTB:Crystals for HF Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-13 00:00:00 UTC
From: Don Gray <lbol@panther.uwo.ca>
Message-ID: <01bc8fc4$2c0c5920$0100a8c0@don>
Source record: 118109
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hi and thanks for reading this.

I have a crystal controlled HF rig that I'd like to get into operation. It will operate on the 80 & 40 M ham bands and frequencies outside them from about 2 to 10 MHz. The crystal frequency is the desried carrier frequency plus 10.7 Mhz. The crystal size is the miniature plug in type, the same size as was found in most scanners and HTs etc. before things got synthesized. By the way, if anyone knows the proper desgination for this size of crystal please let me know.

I'd like to get an assortment for 80 and 40 (CW and phone) and as well, I'd be interested in crystals that would give me receive on some common SW frequencies (i.e. WWV, CHU, BBC VOA). So I'm basically looking for crystals between 14.033 MHZ (CHU at 3.333+10.7) and 20.7 MHZ (WWV at 10.00+10.7). In between that range I'm mostly interested in crystals from 14.2 Mhz to 14.7 Mhz (80M) and 17.7 Mhz to 18 Mhz (40M)

If you've got something that fits into the above frequencies and is in the size of holder I'm looking for, please send me an email describing the crystal frequency(s) and how much you're asking for it (them).

Thanks,

Don

424. Drake MN-2000 Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-13 00:00:00 UTC
From: JJENSEN@Vax1.Mankato.Msus.Edu
Message-ID: <5qbgl7aal1@nitrogen.mankato.msus.edu>
Source record: 118125

I'm considering using my MN-2000 tuner in conjunction with a loop antenna on 40. My concern is the power handling capability of the tuner. Yes, it's rated at "2000" watts, but that was using the "old" method of calculation. Is the thing really capable of handling "today's" legal limit? How about it's coax switch? Suggestions for beefing it up (if necessary)???

I've found that some older accessories experience melt down when running high power. The MN-2000 is often described as a battleship and certainly looks to be a heavy duty piece of equipment...

Yes, yes, I know some people are going to say "try it and see." I really hate to invite an arc and ruin the tuner and/or my 3cx800's.. The tuner is from my hallowed B-line (my first non homebrew/non-heathkit) station, and is, therefore, part of the family.

Any insight/experience most welcome! Thanks in advance.

I'm trying to restore a fantastic VHF-UHF receiver made by Regco (R.E. Grimm and Company). Anyone out there heard of them and know where I might find more info on their products ?

regards,

Don

427. $$$$$$ LOAN BUSINESS, EASY MONTHLY INCOME, NO BRAINER $$$$$$

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-14 00:00:00 UTC

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to

work. This
system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

432. Callbooks FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-14 00:00:00 UTC
From: Chuck Penson <penson@sci.mus.mn.us>
Message-ID: <33CA319A.7338@sci.mus.mn.us>
Source record: 118133

I have a couple of old callbooks for sale.

One is the Winter 1956. Overall I would characterize it as being is very good condition. The cover show only a little wear, the lower four inches of the back cover have become detached, and the top one inch of the edge has peeled back. No torn pages, no water damage, no writing anywhere. $30 OBO shipped.

The other is the Winter 1968-69, also in very good condition. No rips, tears, or missing pages. Covers intact. Very minor small stain on front cover. $20 OBO shipped.

Cheers,

--

REDUCED PRICE and more tubes! Box contains no "TV service junk", all
6&12 v useful tubes, not inventoried, will not sell individual tubes,
but contains many common radio and communications/audio tubes for
example:6SN7,6SL7,12AX7/AT7/AV7,5v rectifiers,6V6,6L6,6CB6,many
tuner and radio tubes like 6BL8, 7-8-9 pin min.and octal,6K6,5u4,
etc.....MORE than 100 in all,half new, 30%tested, 20%random-
good stuff for beginner in audio or vintage ham.
WHOLE BOX $70 shipped CONUS
still have a couple of tube testers- Heath IT-17 compact and VERY
clean, works, 1960s vintage, nice workmanship, steel cabinet $35 plus
a little shipping----KNIGHT tube tester, works fine, shows a little
wear, I've used this one for 10 years myself, $30
Free shipping if you buy the tubes -
Thanks, Walt, WB5LJW, please advise by e-mail

444. Advice needed to get Valiant fixed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-14 00:00:00 UTC
From: jfjbarna@sciborg.uwaterloo.ca
Message-ID: <EDBtp2.B7w@watserv3.uwaterloo.ca>
Source record: 118145

I need advice, info, thoughts, ideas on how to get a Valiant transmitter up and running. When the transmitter is set in the AM mode and used with xtals, I can get current readings for buffer, oscillator, plate and modulator but no grid current. The plate current does start to runaway after a few minutes. However, when set in the AM mode and the VFO is used I can get the appropriate (ie. manual specs.) current reading for buffer, oscillator, grid, plate and modulator but I can't get any meter deflection when testing with the microphone ie. mod current remains a constant 50 mA no matter how much the audio gain is turned up. I've examined the components of the audio circuit and haven't been able to find a defective component and replacing the tubes in that section doesn't make any difference. No runaway plate current is observed when using the VFO in AM mode.

I've found one component that I will definitely replace. R23 is supposed to be a 9 kOhm 7W resistor but when I measured its resistance I found it to be closer to 5.6 kOhm. I measured the voltage at L44 and found it to be +360 VDC and the voltage at R23 was found to be -200 VDC. The schematic lists the voltages at those components to be +300 VDC and -265 VDC, respectively. Is this change in voltages sufficient to cause the symptoms that I've found? Or is something else going on?

Any help would be appreciated!

Thanks

John

Yes, Dentron did make an amp for 6 meters that put out 1200W pep. I remember that there was something wrong and AES sold them "as is" probably a good reason to stay away from them.

Suggest Henry or Command Technologies for 1KW VHF amps.

Ah, yes, an S-38E, my first shortwave/ham receiver. I got mine about '57 or '58 when I was but a lad. <g> Brings back memories.

Not a great radio, as I recall (it was cheap at the time, 50 bucks, maybe, in late '50s dollars), but provided ok performance for the time.

The contact cleaner probably will help.

The S-38C is, I think, something like a 10-year older model.

Best of luck.

From: n1ist@netcom.com
Message-ID: <n1istEDE29x.HGF@netcom.com>
Source record: 117976

I'm trying to clean out my shack and just turned up a Budelman Electronics Corp type 17A4A-2 (S/N 3317) Frequency Deviation meter. It measures FM deviation on up to four crystal-controlled frequencies in the 25-50, 152-174, and 450-470 Mc range; according to the stamped name plate, it has 37.70, 37.82, and 147.300 rocks in the two crystal ovens. It uses one 1L4 and 3 1U4 tubes. I don't have the batteries (2 AA, 2 D, and 2 #455 45 volt B batteries, so I haven't tested it. It looks like it was built on 4/24/62 (first record on the CAL chart) and was last calibrated on 11/6/69 at 1:35 PM, and no longer used after 12/69.

I have no idea what it's worth (someone wrote $398.00 on the manual cover in pencil; I guess that's what it went for new :-); I'll take any reasonable offer plus shipping from Boston (02111).

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
July 20th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

490. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-16 00:00:00 UTC
From: jpl@qc10.ho.lucent.com
Message-ID: <5qikns$av9@nntpa.cb.lucent.com>
Source record: 117991
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Not true -- you always had to check the individual modules if you really wanted a radio that was completely made by one manufacturer. The modules are interchangeable and when radios went into repair depots, modules were swapped for another working one without regard to manufacturer. Thus, it is possible to have a Collins tag on the front panel but no Collins modules in the entire radio.

510. Need Scopemobile Tray

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-17 00:00:00 UTC
From: Travis Martin <travism@copycraft.com>
Message-ID: <33CE6869.5CA8@copycraft.com>
Source record: 117917

...for a Tektronix 465.

The scopemobile that I have is actually for another similar model. I'm using it now, but it doesn't fit right...the holes for the feet are not positioned quite right, and the tray is a couple of inches too long.

I'd buy either the tray, or a whole scopemobile. Any help would be appreciated.

Thanks and 73's,

Travis N5AY

511. FS: Johnson Viking II (it's back... sale fell through)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-17 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5qlnct$jqg@sf18.dseg.ti.com>
Source record: 117918
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For Sale (or maybe trade):

Johnson Viking II transmitter with manual (nice photocopy).
Operating condition unknown. Cosmetic condition fair to
good. Wear, scratches, etc, but not damaged or rusted,
and front panel looks presentable (a lot of scratches
around the edges of the bezel). Appears to be complete,
no obvious damage or modifications, all tubes are there,
but I haven't tested them. Line cord is the old rubber
covered type and is badly cracked and worn, so I haven't
tried to power it up (death is a permanent condition!).

This is the same one I had listed a couple of weeks ago,
but the sale fell through. I had several people contact
me about it. If you guys are still interested in this
rig... it's back!

Price $75, pick up only (north of Dallas, Texas).

email or phone me if you're interested.

73,

Dean Hemphill, K5DH

Source record: 117919
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a FTDX100 for sale. This is probably the pedecessor to the FT101. It is a solid sate rig with tube driver and finals. It is more like the FTDX401 in case style but with a black face. It is in excellent condition. Works great except the 40 meter local osc. crystal is intermittent. (could be replaced for about $12) I have the original box and original manual in Japanese and I have a copy in English.

This is a rare radio... at least I have never seen another one.

Make Offer.

If interested call me at 520-284-6848 or e-mail nu6x@sedona.net

==========

Well, I see them for more than $10 in places. I sell them for $3. If you need them they are worth any price as the unit probably will be junk without the ballast tube. As a general inventory item, they take up space for long periods of time. Some ballasts are very sought after as for the 390A recievers and the Zenith Trans -'O' recievers.

What Rolfe says here is correct. If you read the first echelon TM you
will see that the technicians were taught how to remove suspected
defective modules and replace them on the spot to get the equipment back
into service as soon as possble. The defective modules were returned to
Depot for further repair by technicians trained to perform service at the
module level.

I have seen R-390As bearing Collins nameplates that had mixed modules
inside and this is the reason why.

Dave Medley is offering these nameplates to those who have R-390As
without them. If I were in this situation I would be very happy to
acquire any nameplate I could find to make the radio "complete". The
criteria of this fine radio should be how it performs not who the
manufacturer is (unless you happen to have one made by Henela Rubenstein).

If a mixed manufacturer module R-390A was acceptable to the
military/government who paid big bux for it it should also be acceptable
to you. It certainly is to me.

Hello Gang:

Another project that I will not be able to complete.....

This is a techie special: a YAESU FT-101E that needs some attention. It is totally dead . Nada!

It is complete with all modules but missing the top cover. Unfortunately I do not have the manual or the mic. Any takers?

Please reply by e-mail if interested.

You are so right, sir. I personally spent two of the four years that I was in the Marine Corps repairing and maintaining R390's and R390A's...we had literally hundreds of them (Used at Naval Security Group sites all over the world...I worked on 'em on Okinawa, then was assigned as an operator (of 390's) for my last 13 months at Homestead, Florida.

Yes, this was nothing more than a piece of equipment to these guys...you maintained it solely for its performance; no consideration was given to keeping it authentic for future collectors. Good spare receivers and good spare modules were inventoried in depth at all facilities; it was much easier to keep them in service by swapping modules and repairing them later. We did repair all our modules, but not necessarily before returning a receiver to service...If you had a problem with, say, the audio module, many times the easy thing was to flip the receiver over at its operating position, switch the module, and return it to service. Sure was a lot quicker and easier than lugging that 75 pound beast back to the maintenance area to repair it...plus lugging a 75 pound replacement back to the operating position so that the position could keep running...then updating your inventory/pm records to reflect where the two receivers now are...

As to "fooling" anyone with Collins nameplates...why would anyone do this? And you can look at the decal on the rear panel...it states who made the radio too.

But aren't they marvelous receivers? Lotsa fun.

73's,

Travis N5AY (I was WA5KSW when I was in the service...didn't get the new call till '75 or '76...guess I got the 25th "N" call in the 5 district...)

Hello,

I have a Marage 10 in 150 out 2m amp. "g150"?
Has fm/ssb switch.

Want to trade for a 6m sb200 or another 6m amp...
I'll take a sb-200 that needs to be modified.

Let me know what you got.
Thanks.

Terry,
An EV 638 is a dynamic, Hi-z mike with a 70 to 10K Hz bandwidth and an
output of 57dB below 1volt per ubar. It requires a 100K ohm minimum
load.

Good luck...Rick...W5RH

>
>De WM2X/VE7, Wonki...

OM:
A few mothballs thrown into the cabinet, & then put the whole
thing into a sealed cardbord box, with a few more sprinkled inside. Let
sit for a week. Works wonders. Also, if you have musty smelling books,
seal book in baggie, after throwing in a few mothballs.
Ed K3PRE

Subj: Re: HELP ; Elimination of cigarette smell
Date: 97-07-16 04:35:56 EDT
From: dgf@netcom.com (David Feldman)
To: wonkioh@aol.com

Dr OM Wonki,

First step is to place radio in your garage or other open air location,
for
a few days time. If you have large fan, place in position to blow on radio
for a few days, as this will speed up evaporation of tobacco residue.

Then, remove outer case and wash heavily with "MR CLEAN" cleaner, at high
strength, with rinsing.

Then, for all other parts, use WINDEX glass cleaner with paper towels to
scrub down parts.

Even vacuum tubes will accumulate tobacco residue.

Also, it is danger that tobacco residue will cause malfunction in switch
and
control, so good quality contact cleaner will help.

Fortunately, I *always* find that in 2-4 week time, almost all bad smell
is
gone from equipment due to natural evaporation of residue.

Good luck,

73 Dave WB0GAZ dgf@netcom.com

Hello Wonki
On the smoke , If you can get some (Hand Cleaner) with Limon
in it that will make it smell like new . I buy the hand cleaner at
HI-Lo auto supply hear in Austin,Texas ((TRY IT))
See you all later JR kb5mer@aol.com

Hi Wonki, any suggestion except ... OK you could change your wife???

ONLY JOKING! In fact I sympathise with your wife.

I suppose she could also change ..... On second thoughts that's
probably not a good idea either. Better forget it.

I'm afraid the stink is likely to linger for a long time.
It is possible here to buy in the supermarkets a spray especially
to tackle cigarette smoke so I guess that you may be able to buy
something like that over your way.
Good Luck!

Title : Smoke Smell Cleaning Idea
Path: !VE4KV!VE3NAV!KA2JXI!VE2CEV!NY2S!K6VE!K6VE!W6JBT!N7SX!

Wonki,

I would suggest finding an article on restoring old radios. They usually
have a section on cleaning rust,dirt,etc from the chassis and parts. This
should get rid of most of the smell.

I saw one article in the January '97 issue of QST. For tobacco stains he
reccomended Tilex Mildew Remover on the spots. The basic thing is to dis-
assemble the rig and clean the 'waterproof' parts with dishwasher
detergent

and water. Tougher stains use rubbing alcohol. Be very careful with dials as the markings on 'older' equipment are fragile. I would clean the outside
and inside of the cabinet, the 'outside' of the chassis, all tubes, knobs,
meter face. If there is a fan; clean the fan blades and whatever is directly
in the airflow (i.e. near the fan).

Hope this helps. 73, Bob KD6KTQ

VK2UK/TPK 1.82 Msg #:758 Date:17-07-97 Time:8:21

Hello Wonki.....
This is what I have done many times.
1) Disconnect the Meter from the Unit... put in Safe Place! and FAN.
2) Remouve all Valves from Unit and Store in a way that you can put them
back in the same place there came from (do not mix them up) You must
make shure not to mix them not even the same Tye of Vales each Valve must
go back into the same Socket (this is most IMPORTANT)
3) Use a large Container (Bath Tub) and fill with warm (not hot)
Water.
4) Put in a liberal amount of Dish Washing Soap (get it from
the
Supermarket and not the Kitchen)
5)Put the KWM-2 into the Water and lift it up and down in the Water for
2 or 3 Minutes.
5)Do NOT use any Water Hose.
6)Let the Water out of the Tub and fill again with Warm Water (NO SOAP)
7) Lift the Tranceiver in and out of the Water for 1 Minute.
8) Repeat Step 6 and 7 and again if needed.
9)Now DRY the Unit in the Sun or with an Electric Fan Heater, make shure
you use only a low TEMPERATUR and low Air Speed,this should take at least
1 hour better still 2.
10) Let the Unit Dry out more (gentle Air flow (no heat).
11) Replace Meter and Valves.
12) Power up unit after 2 Days and switch on Filaments only for 24 Hours.
" Your KWM-2 should now be a good as new "

Source record: 117760

Yep, I agree, it is neat and it is overpriced. So are '67 Corvettes and '32 Cadillac V16's. Unfortunately, the old laws of supply and demand come into play...you demonstrated it yourself "...I have some but I don't want to sell."

The 312A1 speaker is $600 (likely will bring somewhat more) because there is only one for sale and probably 20 people including me who would love to have it will see the ad...who knows how many more won't see the ad. I won't even waste the man's time because I know I can't afford it, but several who can will, and some lucky guy will get it. That still leaves a big vacuum...lots more folks want one than can have one.

Conversely, if there were enough to go around, they would just be old obsolete radios, and not that many would be collecting them. I promise that I still would be, but for reasons not easily explaned. I pursue ham radio for pleasure, not ultimate communications, and I like Collins gear quite simply because I like it; it makes me feel good. So I'm with you...wish more of this stuff wasn't out of my reach.

73's,

Travis N5AY

ps...if you change your mind and decide to sell, at reasonable prices that guys like me can afford, of course, please email me directly...don't post to a newsgroup; you'll only get higher offers and mess up the whole concept!

551. COLLINS stuff is neat

Collins radio stuff is neat and good looking and I have some. It just isn't worth the rediculous prices I see people asking for it . There is tons of that stuff out there, and it is ancient technology. I like mine and it is in excellent condition, and I have no intentions of selling it. $600 for a speaker is utterly rediculous but I imagine some fool with more money than common sense will pay that price. All the purchaser is doing will be keeping the prices artifically high. Don't pay the high prices and help get the costs of Collins equipment down where JOE HAM can afford it.

LW-51 Double Deluxe 2 & 6 meter Transmitter

559. B&W Matchmaster -- ballast lamp??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-19 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-1907970957220001@cu-dialup-1001.cit.cornell.edu>
Source record: 117769

I need to replace the ballast-lamp on a B&W "Matchmaster" swr/power meter.
A previous owner put what looks like a 15W(?) xmas bulb in there, but the
manual states that a bulb with same characteristics as the original must
be used.
To quote the manual, "... this is VERY important."

They don't state in what those characteristics are, or what type of
standard bulb can be used. All they list is a B&W part number.

Can anyone "enlighten" me on what would be a proper bulb to use in the
Matchmaster?

Thanks and regards,

Keep in mind that these manuals are probably going to be photocopies of the originals.This is usually not a problem, but sometimes a page or two can be smudged or otherwise unreadable. And I'm positive that they would make good on that page as well.It can just be a pain in the (!) when you need the other half of the schematic or the mechanical diagrams when that radio is ripped apart all over the dining room table! Food for thought... ;-)

The main reason that the unmodified R390A exhibits poor behaviour on SSB has less to do with the lack of a product detector than with the characteristics of the stock AGC. Rick Mish (aka Miltronix) has an inexpensive, non-destructive, outboard AGC mod which makes the radio sound beautiful on SSB without the addition of a product detector. I highly recommend this route before going for one of the SSB converters (been there, done that).

570. Help with National SW3 clone?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-19 00:00:00 UTC
From: markust@lx.net
Message-ID: <869264589.2066@dejanews.com>
Source record: 117780

Hello and thanks for reading this post. I have what looks like a National SW3 clone and I am trying to find out if there were any other companies (other than National) that made radios similar to the SW3. The radio is in a square black crackle box with a lift top lid. It looks to have been factory built because everything is perfectly aligned and all of the holes in the cabinet/chassis have been punched as well as all of the binding posts have recessed labels on the tops. Although with the right tools, I guess an individual could duplicate the radio. All of the internal/external parts appear to be vintage and those parts that do have labels are the National brand. It has a phone tip speaker output in the rear. It also has an on/off toggle switch and phone jack on the front as well as two pots and a National brand vernier tuning control. The tube compliment is a 227, 224, and a 2A5. The coils are four prong. The obvious difference between this radio and an SW3 is the placement of the front panel controls, the SW3 controls are below to the right and left of the main tuning control and they are above to the right and left of the tuning control on this radio. If anyone can help identify or point me in the direction of someone who can, please let me know. Thanks, Markus

Source record: 117781

I dunno, George...I've been collecting records (45 rpm, mostly group harmony) for a long time...the foriegn buyers...mostly japs and belgians...bought up an awful lot of the best stuff; paid premiums for it. But now it's starting to come back. And sometimes the prices are surprisingly reasonable. I don't know if the fad wore off or if the exchange rates aren't as favorable...I just don't know how to explain it. But maybe some of the neat McIntosh tube stereo gear and nice radios will come back to us yet.

We can always hope...

582. WANTED schematic/info for HEATHKIT ar-15

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-20 00:00:00 UTC
From: cogline@emi.net
Message-ID: <33d171d4.2157478@news.emi.net>
Source record: 117783

Hi All... I'm looking for info on an old heathkit stereo am/fm reciever, the AR-15. I Need to know where i may be able to fin a parts list, of schematic. My ar-15 works fine except that the mode (am/fm/tape/aux/phono) switch is damaged, and I need to get the part number to order a replacement.

Thanks

Hi all,
I recently aquired several BC-610 coils. There are a total of eight coils. I am not really sure that they are all BC-610 coils. I don't need them and maybe someone out there does. They were in a bunch of other stuff I aquired. The following is a list of the numbers that are on the coils.

(2) 51C542 C447 8.0-11.0 MC
(2) 51C543 C448 11.0-14.0 MC
(1) 51C544 C449 14.0-18.0 MC
(1) C390-A 5.7-8.0 MC
(1) 1739 51C710 8.0-11.0 MC
(1) 1740 51C711 11.0-14.0 MC

They are in a leather case and that goes with them. I want to sell all of them at one time. If anyone is interested, drop a note to mskobier@3-cities.com.

So far I have received 11 replies agreeing fully with my comments and 1 reply that really didn't make it clear as to his thoughts. Nobody has flamed me, but I didn't expect to be
because BA people are the cream of the crop in radio in my opinion. To those that have replied, thanks for your comments; To those that haven't, please do so. To those that have no idea what my previous posting was about, I commented that in MY opinion Collins equipment is way overpriced for the 30+ year old technologoy (boatanchors not the Rock-Col) and the stuff isn't rare, and it (most) just isn't worth what is being asked for it. And I am a collins owner that will not sell mine because I really like it.
A few comments stated that the Japanese are the cause of the high prices. Pure BS!
It is our American greed that artifically raised the prices The only thing the Japanese have done to America in the last 50+ years is bomb Pearl Harbor with their Mitsubishi Zero's . Everything else from electronics to automobiles WE Americans dropped the ball on. How many of you have a Mitsubishi auto in your driveway! Hey, let us Americans
make a pact right now. SELL NO MORE COLLINS TO JAPAN!!! They won't buy our Chevy's, we won't sell them our Collins AT ANY PRICE.
I would appreciate any comments, Thanks . John N0EE

> it.

I find the recurring threads on this theme, humorous at best.

Of course, the fact that people *are* willing to place the prices indicates that they think its worth it and are willing to pay for value. Your view that Collins is *ancient* technology matches the jaded view of the times. Sit down and spend some hours with a Yaecomwood and a good S-line side by side ....

As to rarity -- yes, there is still a lot of Collins gear around. But much of what *is* around is beat up junk or the less desireable items. The better quality and higher performing pieces are not so plentiful. And clearly, the demand for those pieces outpaces the supply.

In part, prices may be bid up because of speculation. I think there is much less of this than we all assume. Anyone who would collect this stuff as a retirement investment is just plain stupid.

> It is our American greed that artifically raised the prices

Oh, bull croppie. Since buyers have as much or more to do with setting market prices, the "greed" argument doesn't hold water. And what does being American have to do with dealing in Collins gear? Its old, stale rationalization. Bought a slide rule lately? Or an old, non-working broadcast radio in a Catalin case, or a Curta calculator? Or an original McElroy in beautiful condition? If you want to see greed, then go look at the business/government partnerships of the rest of the world, too. It is *human* to accumulate -- not "American". Find a book called "The History of the World", read it, and make note of the things that motivated and drove that history. THen take note that being "american" is a tiny spot on a wall mural of time.

We live in a global economy. If the Japanese, or French, or Methodists have enough money to purchase the stuff, then so be it. Don't just groan that prices are too high so you can buy more or that all Americans can corner the market so no one else can buy it. If Fujitsu offered you a job at twice your current salary -- would you turn it down because to take it would be a display of greed? NOT likely. If you want to own

Collins equipment, then be prepared to compete in an open market of buyers and sellers.

Regards .. Grant/NQ5T

Source record: 117795

The heck they won't buy our Chevys! A neat Corvette brings big bucks there; only the wealthy can play because of the duties though.

I still think you're way off on "overpriced" though; the market always finds equilibrium. As I said earlier, you are epitomizing your own complaint...you like your Collins gear BUT don't want to sell it; other people like it and will only sell it if it brings a big price. That's precisely how supply and demand works.

Why do you think diamonds are so pricey? They have absolutely no intrinsic worth...just pretty baubles. Lots of people like 'em, and there aren't enough to go around, so there go the prices.

Give some thought as to why a 5 carat gemstone is worth much more than 5 one carat stones...there's your answer to the Collins question.

I'm not gonna rise to the "obsolete" statement. Suffice it to say that I disagree.

I could show you parallels in the record collecting hobby. Rare does not always translate to valuable; it has to do with how many there are versus how many people want one. There are several records by Elvis Presley, for example, that are not at all rare; they pressed hundreds of thousands. But there are a heck of a lot of Elvis collectors, so they bring a high price. Conversely, there are artists who pressed only, say, 500 records...maybe 5 are known to still exist, yet they are not at all valuable because there aren't but 4 people that want one! Where the prices get really outrageous is when you get into somebody well known and very collectible and find something that was done in very small quantities, usually before they were known. I recently traded off my copy of "Ooby Dooby" by The Teen Kings on JeWel(this was Roy Orbison's first record) and am embarrassed to tell you what it is worth...I traded it for another record that I wanted worse...we're talking over a thousand dollars for a 45 rpm record. Yeah, I know, it's crazy. And there are some that are worth upwards of $10,000. Outa my league, though.

An equivalent to this would be the Collins KW-1...this is a $30,000 transmitter because it is ultra neat AND ultra rare...about 12 are known to exist, and way more than 13 people want one, so the price goes through the roof. Conversely, the 32S-1 and 75S-1 are very good pieces of equipment, but just about everybody wants the 32S-3 and 75S-3B or C, so the S-1's are, by comparison at least, quite cheap...it's nothing more complicated than how many people want one versus how many are available. As Ross Perot would say,

"Got It?"

73's,

Travis N5AY

Funny thing is, not too many US citizens were interested in the old stuff till the late 80's or early 90's. Boatanchor used to be a term of derision for what most hams considered to be old, heavy, useless junk.

Ya can't blame the Japanese for seeing the value of the old stuff before the US hams did.

UR right, there are only a "few" KWM-2's around!

Rarity is only one reason why Collins stuff is high priced. The name
counts for a lot. There are many radios that are more rare than a
75A-4, but most don't bring the same price.

Good points. However, there are far more than 12 KW-1's known to exist. The number is closer to 100. Still, there are more than 100 people out there who'd like one. Now if you'd specified a 30FXB, 12 might be closer to the truth.

Well folks here is a post from San Diego/Tucson/Yuma/North Carolina/Frankfort Germany /VA/TX via mucho motel fone lines. Comm guy on the road like a rock band!

Been on the road for almost 3 months so promises of manual copies etc. are on big time hold until I get home but all will be honored. Latest finds are as follows:

Heath DX-35, covered w pigeon crap/mud but saveable, anybody have experience with this little beast? $5 at a yard sale, 6146 50/60 watt set.

BC-221 hetrodyne freq meter, Looks like Army version of the LM series I used in the Navy. This Doggie model has pwr supply and calibration bk. Da booger will be carry on baggage. Any help here, $5 American money?

Gertsch FM3 freq meter, 20-1000Mc .001% , looks like the LM/BC221, $5 also. Any help or "heads up" experience appreciated.

GRC-9 stuff: I have two keeper GRC-9 sets w/accessories but have found these extra little pieces while on the road. If'n ya have an ANGRY9 an wanna get the bits lemme know.....we kin swap ta getcha up to speed!

MT-350 GRC9 vehicular mounting for the GRC-9 new condition 2ea

BX-53 acessory box 14 ea, These are in new/like new condition but do not have the tubes etc. which you should be able to get from various tube/part sources. Fair still has the canvas bags for the GRC-9 stuff, BG-174 antennas, BG-175 generator, BG-172 ruck for accessories, they have the radio bag too but I cant remember the #. Boxes are only a couple a bucks.

Hello All,

I picked up a General Electric 2 piece Mobile Radio Business Radio at a
hamfest this Afternoon. It has crystals for 6 Meters in it. and I am
told its power out is abt 55 Watts.
Looks like a radio from the 70's or 80's

I Cant find any model number on it though
.
It has a 3 Wire Power Cord almost like a 3 Wire AC cord.
All wires the same color Black, with Lugs on the end/
I found the Chassic Ground but I need to know which of the other 2 wires
is for for power and what the other wire is for. Perhaps it is a
floating ground?

If anyone has any data on this unit or
if anyone out here can Email me a pinout or post the pinout for it, I
would appreciate it.
Thank you in advance.

Hello and thanks for reading.

I have a complete Robot slow scan television system in beautiful condition or dare I say near mint. This consists of 3 pieces. A model 61 station control console, Model 70 monitor console and the model 80 camera with tripod. I also have the manuals and looks as if all connecting cables are there as well. There are 2 spare vidicons for the camera that are included. This was from the estate of a Silent key and he took very nice care of his equipment, I though am totally unfamilliar with SSTV so have no interest in incorporating this into my shack. Would prefer to have this picked up but will consider shipping. Price is best offer over $150.00 + shipping. Really nice setup that cost close to 3500.00 when new. Couldn't afford it went you were younger? Well now you can.

Yep, the Japanese gave us the automobiles the American car makers
wouldn't...and they're still here. I own two of them.

Off topic, but didn't Howard Hughes design the Zero, try to sell the
design to the U.S. Gummint and the Zeroes flew circles around a lot
of our fighters until the Mustang came along?

I believe the reason that Cooolins gear is so cool is because it looks
like a *real* radio with real meters and knobs and active devices that
light up. You know, something you can fix yourself without having to
resort to a surface mount work station and microscope.

Be careful you don't remove the tube designations when washing the tubes.
The markings were designed to come off when the tube is washed.
This was done to prevent people from washing used tubes and then selling
them as new.

638. KENWOOD R-1000, 12 VOLTS????

Newsgroup: rec.radio.amateur.boatanchors

The R1000 actually runs on 13.8v. The AC line goes to a small power
supply that outputs 13.8.

The kit you need is the DCK-1. Or you can make your own by putting 13.8
v where the internal supply ties to the radio (disconnect internal
supply of course).

647. R.L. Drake Logo Caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-22 00:00:00 UTC
From: w8pu@aol.com
Message-ID: <19970722195800.PAA08834@ladder02.news.aol.com>
Source record: 117848

ATTENTION: Drake Amateur Radio Equipment Owners / Collectors

The Drake Amateur Radio Club, with the permission of the
R.L. Drake Co., is now offering Baseball\Golf caps featuring the
"OLD" Drake logo, used on most of the Drake amateur radio products.

The caps are California Blue in color, which is as close to
"Drake Blue" as we could get, and the white and black logo measures
1 inch high and 5 inches wide across the front of the cap.

USA Cost $15.00 each, shipping included. Outside of USA,
E-Mail "DRAKEARC@AOL.COM" and request the charges for shipping
to your QTH. Please provide your complete shipping address.

Caps will be shipped from the R.L. Drake Co, Franklin, OH production
facility.

To order, send a MONEY ORDER for $15.00, (per cap) US funds, made
payable to: "Drake Amateur Radio Club" and send to the address below.

Drake Amateur Radio Club
ATTN: Radio Room
230 Industrial Drive
Franklin, OH 45005

Be sure to send a cover letter along with your money order providing
the number of caps ordered, your name, address, and a daytime phone
number (or internet address) and any special shipping instructions.

NOTE: PLEASE DO NOT contact the R.L. Drake Co. for information
about or to order caps. This offer is made from the Drake ARC and
it's members. For additional information, or comments, you may send
E-Mail to "DRAKEARC@AOL.COM"

Check the Drake ARC web site at WWW.magwa.i-sol.com/DRAKE/ for future
offers!

The members of the Drake ARC, thank for your support.

649. SRR-13A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-22 00:00:00 UTC
From: Curtis Scholl <cscholl1@ford.com>
Message-ID: <33D51901.5548@ford.com>
Source record: 117850

Hello there all!!

I am trying to find a radio I once used in the Civil Air Patrol.
It is a SRR-13A. The description is a general coverage radio that fit into a chassis rack (i assume) because it had no case around it and a very heavy front panel with screw/dzus fastener type holes on the corners.

It covered 530 to 30 MHz in 4/5 bands with AM CW and I don't know what else. It was a neat radio and I want to find one like it again.

Any help appreciated.

Curtis Scholl

Swan 500C 10-80M HF rig, matching 117XC Power supply/spkr., Shure 444 desk mike, will throw in homebrew tuner. Sorry, no manual but I would imagine that there are many fine folks out there that will provide copies. big old broad shouldered tube rig, nice starter rig or nostalgia toy.

Not quite mint but in very good+ condition, used regularly until 3 weeks ago, selling for a local who is no longer able to operate due to health reasons, $265 plus the UPS, or swap for dualband mobile, 2M mobile, ???
email replies please.

Can't help with the radio itself, since mine isn't for sale, but
have lots of info on the SRR-13A specifically, and general info
on the related FRR/MRR/SRR receivers of similar design/construction.
See my web page for more info.

Gonset G76 transceiver for sale. Front panel is a "10" - no rub marks,etc. includes the rare matching AC supply w/ spkr. Few scatches on outside of cabinet - nothing major. Seems to work great and makes a nice 120 watt AM xcvr on 80 thru 6 meters. Asking $385 for both pieces plus will split shipping
from Mpls, Minn. area.

Also have matching Gonset Communicator IV - 2 Meter AM xcvr in "as new" overall condition for $185 plus shipping..

Will sell all equipment together for $500 plus shipping..

Call me at 612-955-3473 or E-Mail at W0OGM@AOL.COM

Thanks and 73's, Gary

WANTED:

My father is filing a 610-V to get his original callsign back. The FCC has
been dragging thier feet with this one. They tell me if it gets denied
that he can re-file with some sort of proof that he once held that call. I
need to get a copy of a page from a 1957 or 1958 callbook that lists:

K8BDB as Edward L. Kopp in New Philadelphia, OH. I already have a copy of
him as KN8BDB, but K8BDB is the call he wants.

If it's something you can scan and send to me, that would be great. Or yo
can send it via US Postal Service to:

Greg Kopp KG8O
12508 Bangor Avenue
Garfield Heights, Ohio 44125

I would be glad to pay the cost of copying and postage.

Greg KG8O

676. Drake Old Logo Caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-23 00:00:00 UTC
From: w8pu@aol.com
Message-ID: <19970723201600.QAA26322@ladder02.news.aol.com>
Source record: 117877

ATTENTION: Drake Amateur Radio Equipment Owners / Collectors

The Drake Amateur Radio Club, with the permission of the
R.L. Drake Co., is now offering Baseball\Golf caps featuring the
"OLD" Drake logo, used on most of the Drake amateur radio products.

The caps are California Blue in color, which is as close to
"Drake Blue" as we could get, and the white and black logo measures
1 inch high and 5 inches wide across the front of the cap.

USA Cost $15.00 each, shipping included. Outside of USA,
E-Mail "DRAKEARC@AOL.COM" and request the charges for shipping
to your QTH. Please provide your complete shipping address.

Caps will be shipped from the R.L. Drake Co, Franklin, OH production
facility.

To order, send a MONEY ORDER for $15.00, (per cap) US funds, made
payable to: "Drake Amateur Radio Club" and send to the address below.

Drake Amateur Radio Club
ATTN: Radio Room
230 Industrial Drive
Franklin, OH 45005

Be sure to send a cover letter along with your money order providing
the number of caps ordered, your name, address, and a daytime phone
number (or internet address) and any special shipping instructions.

NOTE: PLEASE DO NOT contact the R.L. Drake Co. for information
about or to order caps. This offer is made from the Drake ARC and
it's members. For additional information, or comments, you may send
E-Mail to "DRAKEARC@AOL.COM"

Check the Drake ARC web site at http://magwa.i-sol.com/DRAKE/ for future
offers!

The members of the Drake ARC, thank for your support.

Hello everyone,

I finally found some amateur radio related news groups thanks to a
friend of mine. Id like to call your attention to the latest and (I hope
soon one of) the greatest amateur radio websites on the net.

My site is still under cunstruction but the primary structure and basic
links are there. More links and content will be added every couple days
as my time allows and I locate more links.

This site is at http:/www.qsl.net/kc8aco and a big thanks to Al, K3TKJ
at http://www.qsl.net/ for providing space for my pages.

73's to all and happy browsing.

680. Re: Johnson Viking Paint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-23 00:00:00 UTC
From: Jim <jstrohm@taxes.net>
Message-ID: <33D616C0.385C@taxes.net>
Source record: 117881

If you have an exact paint chip, most commercial automotive paint companies can mix up a small sample and put it in a spray can for you.

It's not cheap, but you're guaranteed a color match with fresh paint. There would be an excellent market for providing pre-mixed, pre-matched paint for boatanchors, except for some fairly restrictive ICC regulations on shipping cans of pressurized, flammable liquid.

But -- I bet you could do a good business at the bigger hamfests with a few dozen cases of the most popular colors, at $10/can.

683. Parts for Viking II Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-23 00:00:00 UTC
From: Jack Friday <friday@ccnet.com>
Message-ID: <33D6E587.1352EA30@ccnet.com>
Source record: 117884

Does anyone know where in Northern California I can get 3 parts for a
Viking II I am refurbishing?

The Parts are:

1. 20,000 ohn, 50 watt wire wound adjustible resistor
1. Dual 15-15mf 450 working volts electrolytic capacitor
1. Dual 15-15mf 150 working volts electrolytic capacitor

When I get them, I can finally close the box and get it on the air!
Maybe someone has these 3 parts they would like to sell.

Thanks,
Jack Oakland/S.F.

For Sale:

Navy SRR-24A Receiver Antenna Tuner system, three units in
a common cabinet assembly covering the range 2-30 Mhz. Used for
common receiver antenna system aboard ship in hostile RF environments.
Excellent condition and complete. Fairly light weight for Navy stuff.
Do not know what system the unit is a part of other than the
nomenclature on the cabinet.
$150 or will trade for a complete R-105/ARR-15 receiver.

Thank you

Bob, KE6F

Sacramento, CA 95827

Quite some time back, there used to be a place here in Las Vegas (and also probably in many major cities) that could custom mix spray enamel paints, and put them in a spray can ... I had some done to match a Chevy Suburban that I used to have.

Check your Yellow Pages under "paint", etc., to see what you find there ... as long as you have a reasonable-sized "swatch" of the original that is!

73, and good luck with the project!

>> most honest people I've ever met.

> The last time I checked, Hawaii was a US state and Hawian resident were
>ALL U.S. citizens.

Hi Bear,
Please do not believe that everyone in Hawaii is a US citizen. I know dozens of immigrants who are not citizens. And a good number of my Japanese friends are visiting college students who will be returning to Japan when they complete their studies. They are *not* US citizens.

>As far as Pearl Harbor and World War Two, they are historical facts!
> YOU are the only one that has made this into a racial issue, by taking
>someone elses statment and quoting it out of context.

I'm sorry you feel that way. The email I received from Mr. Mullis reaffirmed his hatred towards Japanese due to WWII. I find it sad to blame their citizens of today for what their military did some 55 years ago. Also, nothing was quoted out of context - please reread the >>> remarks above.

73,
Jeff

P.S. To help explain why the Japanese are willing to pay so much for Collins gear, please analyize the US$-Yen exchange rates. Currently the ratio is 1:115!!!

I guess everybody figures I'll want Top $ for these..
well, not so (at least I don't feel that way)
if you look at copy cost's..now is your shot at a great collection
to fill that library...
You can go to the following 2 pages to see the list's of what I have
for sale...I will consider partial trade on the whole works..
doesn't have to be something BA related even...
If you want to put cash out...
I'll take $1700 shipped cont. U.S., outside US will be extra...
devide it out, thats about $10.36 per item....and i pay shipping!
Oh, I could sell them piece meal, then I'd make more $...but i worked
hard and spent $$$$ to put this collection together..and would like to
see the batch remain intact...
These are not trash condition either..most (not all) are in new or as
new condition....

Source record: 117896
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale... a classic early 1970s all-tube rig...

Yaesu FTdx-570 HF transceiver, covers 80/40/20/15/10m, USB/LSB/CW, built-in 115 vac power supply, 550 Watts PEP *input* on SSB, uses pair of 6LQ6 in the PA. Has original narrow CW filter installed.

Very clean, no modifications that I can spot, no damage/rust/etc. Has two 1/8" holes cleanly drilled in top cover by previous owner (looks like he had a fan mounted there) but there are no other extraneous holes anywhere. Some of the lettering on the front panel has lost its paint (this is a metal panel with all of the lettering engraved, not painted on, and this could be touched up with a small paintbrush if you have steady hands!). It looks as though the previous owners (how many I don't know) took good care of the rig and didn't hack it all up. Not only that... all four of the 10m crystals are in place, which suggests that this rig has never been used illegally on 11m CB -- ya gotta love it!

Rig came from an estate. I've checked it out on CW and it works fine and delivers 200 Watts OUTPUT on 40m. I don't have a mic, so I haven't tested it on SSB, but I see no reason why it would not work. Receiver works fine on all bands and rig appears to be in good alignment. VFO calibration is good. Crystal calibrator, VOX circuit, etc, are all working. Receives WWV too.

This is a LARGE radio, and quite heavy, so I'd rather not ship it (I'm sure you would rather not pay that much for shipping either). I'm in the Dallas / Fort Worth area.

I am asking $350 for this nice classic rig, and I am open to your cash offer (I'm not really interested in any trades at this time).

Interested? Click "Reply" on your browser and email me! Do me a favor, though, and don't quote this message in your reply (waste of bandwidth).

Thanks and 73!

712. BAs For Sale at Timmonium, MD Hamfest this Sunday - Estate Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-24 00:00:00 UTC
From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5r8j8v$79b@mtinsc04.worldnet.att.net>
Source record: 117903

I am planning to attend the BRATS Hamfest this Sunday in Timmonium, MD
I'll be in a blue Ford Van, tag - K2TQN - NJ. (At least 3 spaces.)
Look for the Estate Sale Sign.

I said I would never buy another estate, but I did.
These are the extras I don't need. (first round! watch for more later)

Follows the Microphones for sale:
Most microphones are on stands with cables.

1 RCA 44 BX, 1 RCA 77, >>-> (Note: 44 and 77 may be sold.)
4 RCA 74 B, 1 RCA 88 A, 1 RCA 26,
1 RCA 45 B, 1 RCA 46, 1 RCA Chrome Bullet - nice
1 Altec 833A, 3 WE? T-32 [1940's Candel Stick type],
1 EV 638, 1 Astatic T-8, 1 Astatic CTM 92
1 Brush BR-25 [Ball shaped],
3 American D4TZ [2 in box, no stand; 1 on stand], 1 American D-23
+ several misc. microphones
25 (yes 25) Astatic D-104 Microphnes on stands
.....Please read the following:

Condition of microphones: Most are on stands, reasonably clean and about
half of them were on-line in the hamshack when I disconnected them. None
are tested and are sold as-is. (I just picked them up.) The prior owner
was 84 when he died and worked im communications his entire life. I don't
think the station was used during the last two years. All were hooked to
a huge Collins AM transmitter through a Collins control pannel with two
Collins 16" turntables (all of which are also for sale - more on this
later).

BA Radios and related For Sale

1 National NC-2-40-D w/speaker, very very clean!,
1 Johnson Ranger I, clean, some scratches on top,

ANTENNA TUNERS.....
1 Maxi-Tuner/RFPower Components, 3-KW, matches Collins S-line,
1 Johnson Viking 275 Watt Matchbox,
1 B&W VS 300 A 3w tuner,
TUBES.....
Several 3-500-Z tubes (pulls) at $25. each.
Four 3-3000 Ceramic Tubes (pulls) at $110. eacH.
BOOKS.....
Books - Books and more Radio Books, ARRL handbooks & pubs.
TEST EQ.....
Misc Radio test equipment, all reasonably priced!

HAND TOOLS.....
A large assortment of hand tools @ $1.00 each!
ANTIQUE RADIO's and PARTS
1 Philco Tombstone,
1 Arvin Metal Midget
more.....

See the mikes and some future sale BA items in the station,
as it was, on my web page -- (three - 45k photos):

The A-2516 came out in the mid-60's, although I believe they
were made into the early 70's. It used semiconductors in the
power supply, but the rest of the active device lineup was
tubes. A fun, albeit basic receiver. I sold mine to a friend
a few months back when I began running out of space.

From: in717@cleveland.Freenet.Edu
Message-ID: <5r9ebj$okg@alexander.INS.CWRU.Edu>
Source record: 117724

Hi, I've got for sale on Ebay's Auction Web:
Antique Tube Radio, Lafayette, Pre WW II. The outside case is basically shot. It has the face plate marked with Lafayette and has 2 swastikas, which is what leads me to believe that it is pre- WW II. It has a plate affixed to the back of the chassis marked G7417, which I believe is a serial number. It has 5 vacum tubes, they are marked as follows: 2 are 35-51, 47, 24A, 80. I think that each number should be preceeded by a " G ". All the tubes are Wards Super Airline except the 80 which is Nat. Union Electic. The unit will power up and all the tubes glow. I ran it for 5 mins. It didn't catch fire, smoke, or smell, also it didn't produce any sound. The original case is a round top (cathedral type?). Buyer pays 18 lbs. S&H, Please e-mail me with your zip code for acutal shipping cost.

I don't have details at hand, but it is intended for use with the HP
Frequency Controller (model number like 1809 or some such). The dc
input will vary the generators frequency over a SMALL interval.

The Frequency Controller had a quartz frequency standard, dividers,
comparator, and dc output, and was built to operate with the 606B and
608F generators. You could set the generator frequency to evenly spaced
points, like every 100 kc or so, and it would lock on and hold.

From: dhrnsn@ptd.net
Message-ID: <5rd8umti1@news1.ptd.net>
Source record: 117738

For sale:

Late 50's - Zenith Trans-Oceanic Royal '1000' - (Zenith's first all transistor Trans-oceanic) AM and shortwave radio in poor but restorable condition. I beleive with minor repairs it will work fine (new batteries, repair dial cord). Cosmetically poor, but everything is here, including the removable "wave-magnet" in rear, frequency guide in front cover. Plastic surrounding top antenna/handle is broken and taped. Includes all the extras that came with the radio such as the service manual, operating guide, and a couple of "showroom" sales brochures. I am asking $50 plus shipping.

Late 40's (?) - RCA Victor portable AM (tube) radio model 8BX6 - In great condition and works fine. Could use a little tuner cleaner on the volume control and a good scrubing, but otherwise a very nice sounding radio (RCA "Golden Throat" audio!). I do not have a "RCA Battery type VS019" required for portable operation but it does have a cord to plug into a wall outlet. Tube lineup is a 1R5, 1U5, 2 - 1T4's, 3V4, and 117Z3. No manuals or other literature. Asking $75 plus shipping.

I can deliver them to the hamfest in Timonium tomorrow if desired.

Thanks and 73, Dave Hirneisen/N3GKB, Lititz, Pennsylvania

738. SWAP TS 950SD for?????

Hi all, I am looking to do some horse trading with My Kenwood TS950SD.
This is one of Kenwoods big HF base stations with built in Power
supply, Antenna Tuner, Digital Signal Processing, Dual Reciever,
Selectable and Cascadable SSB and CW IF Filters from front panel,
Slope tuning, Variable Bandwith Tuning, Adjustable AGC, 150 watts and
more that I cant think about at the moment.

My interestes are, but not limited to a JRC 245, a big ICOM rig, a
Racal 6790 reciever, Clean Boatanchor recievers, Clean johnson or
collins transmitters, commercial recievers, Icom970 A or H........
and more

Depending on what you have and agreed price, i will pay, or you will
pay any differences in monitary values. Anyone interested?
Let me know what you have.

Thanks, Jim

Source record: 117743

I collect and preserve-original Command Sets ("ARC-5").
Seeking certain Command Sets / ARC-5 sets:

T-15, T-16, T-17, T-89, T-90 transmitters
or covers/nomenclature plates etc. for them.

Any RAT, RAT-1 or RAV radios.

Any transmitter or receiver for over 9 MC (other then R-28/T-23)
or under 1.5 MC (other then R-23/BC-453).

Any SCR-274N (BC-453 to BC-459, not ARC-5)
manufactured by Aircraft Radio Corp.
(No Continental or Western Electric).

ATA transmitters type CBY-52211 (7-9.1MC),
CBY-52302 (.5-.8 MC), CBY-52303 (.8-1.3MC),
and CBY-52304 (1.3-2.1MC)

ATA modulator CBY-50083 or CBY-50141.
Modified OK; I just need a good nomenclature plate.

Dynamotors for sets ATA/ARA, RAT, RAT-1, RAV.

Original manuals for ATA/ARA, RAT, RAV or AN/ARC-5.

Any racks, mounts, control boxes or accessories
for radio sets ATA, ARA, RAT, RAT-1 or RAV.

Any other unusual or small-production run sets.

$100 reward: I will pay $100 for a special BC-696 tx (3-4) MC.
This is to complete a 2TX 3RX black W.E. SCR-274N rig I have
on the air (send you a .JPG on request).
The rig is black wrinkle paint with a Western Electric
silver-and-black nomenclature tag on the top cover, not the
side. I will pay more for NIB, less for incomplete or modified.
I will pay $25 for a complete, unmarred top to this rig with
good tag and $15 for just the tag in exc. condition.

756. FS: Hallicrafters SR-150

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-27 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <33DB34DC.F1F5F5BA@sprynet.com>
Source record: 117613

For Sale: Hallicrafters SR-150 transceiver and PS-150-120 AC power supply/speaker. Covers 80-10 meters, SSB and CW.

In reasonable condition with the usual Hallicrafters paint chips around the edge of the panel and a few scratches on top. Front panel's good with one wear mark below the main tuning knob.

Rig works but has not been "restored"; I've had it on the air over the last few weeks, and made contacts with perfect reports. Power supply has had all electrolytics replaced.

Has RIT, unusual for a rig of this vintage. Dual conversion, 18 tubes plus regulator, Claimed sensitivity of 1 microvolt for 20 DB s/n ratio. Built in 100 KC calibrator and QT VOX. Provision for separate receive antenna. CW either manual (with mode switch) or "break in" (with VOX)..

I believe the original price of this was $650 without the supply

I'd like to get $225 for the rig and supply. A photocopy of the manual for both is included. Shipping from Nashua, NH 03060 for about 30 pounds for the rig and 35 for the supply total is extra and I can ship it any way you want.

E-mail or call (603)889-1067.

73 es tnx,
-Pete

The 606B plugs can be controlled by a Hp-8708 Synchronizer. This is a strange box that can lock the signal generator to most any frequency you dial up. The signal generator gets stabilized to essentially cystal stability. They managed to do this without using a single digital or analog IC! A triumph of analog engineering, with plenty of PLL's, VCO's, temperature controlled crystal ovens and lots of thick tin castings and gold plated pc boards.

If you want one I have a good working unit and manual that you can have for $50 pls jst 30 lbs shipping. Fair Radio Sales listed it at $195 a while back. What a deal.

A little upset are we? Talking face to face is fine, I'll agree with that part. However, meeting new people in far away places over radio is a lot of fun but it's kind of hard to have a face to face with them. Lighten up. Not all radio folks brag. By the way, we also do a lot of community service as well. Sounds like you know nothing about radio. CBers have REACT, hams have RACES, ARES,SKYWARN, NTS, etc. Learn a little of what you speak before spouting off your B.S.

From: caf@agora.rdrop.com
Message-ID: <5rg78j$e5t$1@hermes.rdrop.com>
Source record: 117629
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I came across a SP-600 J3 Saturday. It was butchered by
some novice who likely had never soldered before.... it
will take some work to restore it to its former reception.

The main tuning condenser consists of electrically isolated
gangs individually grounded with sliding contact. 40+ years
have made these contacts slightly intermittent when tuning.
A general purpose electronic cleaner spray helps but isn't
enough. Any suggestions from Hammarlund pros about getting
rid of this noise???

I'd also like to get the service manual for this radio.

Very nice Heathkit SB-200 HF amplifier with excellent, unmarked front
panel, very good case with a small scatch on the rear and wear on the
lower front from sliding the chassis in and out. Original manual. Full
output on US made tubes.

$290 and shipping from 63033

Working Tektronix 545A mainframe scope with spare CRT, CA plugin and
manual. Scope is in good shape cosmetically except for the handles.
I have a NEW set of handles to go with the unit (u install). No probes.

$50 and pick up in St. Louis. Too big to ship.

Thanks

I have just acquired an old radio called a Neutrawound Super Six. This has been stored in a basement for decades and the person who gave it to me thinks it was purchased around 1924. It has six tubes and six tuning stages and is complete except for one tube. All dials and knobs are still there. All the tubes have removeable shields and the top of the unit is heavy metal. The base is wood. It probably weighs 25 lbs. The only thing I know about it is that it was made in Chicago. Is there any collector value to this or is it just an old boatanchor? Thank you for any information you might be able to supply.

I have a stack of original manuals, mostly Heathkit that I don't need anymore.

Heath:

AM-2 Reflected Power Meter (2 copies) Black & Yellow cover
Seneca Transmitter
QF-1 Q Multiplier
AM-2 Reflected Power Meter Brown & Yellow cover
XR-2P Transistor Receiver
CA-1 Conelrad Alarm
HX-11 CW Transmitter
IG-4505 Scope Calibrator
MW-33 Marine/CB Transciever
IO-4550 Dual Trace Scope
Set of 5 RX-1 pictorial sheets & schematic

Gonset G-28 10m Fixed Station Communicator
Clegg 99'er Initial Installation & Operation and Performance Data (2 booklets)

Copied manuals

Heath "Twoer" Transciever
Lafayette HA-410 10 Meter Amateur Receiver (copy)
SBE-34 manual (very poor copy)

With the exception of the SBE-34 manual these are all in first class condition.

I'd like $65.00 plus postage for the stack......

From: Michael Tracy <mtracy@arrl.org>
Message-ID: <33DCE52A.57FE@arrl.org>
Source record: 117512

Hello! I have a Heath TC-2, but the chart doesn't have settings for the subject tubes (which are in my Hallicrafters SX-110). Since I don't know if these tubes are older or newer than the checker, an updated chart may or may not help.

I can figure out the lever settings, etc., but I want to know where to set the plate adjustment without having to buy new tubes just to see what it should be.

If you have the appropriate information, please email me at mtracy@arrl.org

Thanks and 73, Michael Tracy, KC1SX

Sorry, I don't have any info to help you, but your problem is odd. The tubes in question were introduced in the late '30s, while I'm guessing the tester is a '50s or '60s product. Nobody at that time could produce a tester that wouldn't test those extremely popular tubes. Maybe you're missing part of your chart?

The hamfest this year was outstanding; that makes up for the previous years of poor performance.

I was fortunate enough to pick up the following:

NIB Transoceanic A600. Still in the original shipping comtainer with the Railway Express markings with invoice, inspection slips, manual, etc. The seller himself had cut the shipping seal to examine the contents. Original buyer had NEVER opened the box.
Original cost $116.20 Cost to me $115

Meissner Signal Shifter Excellent condition 9+ $40

Hammerlund 180 with comprehensive manual for all three models. Now I know why this is such a desireable unit. Condition 9 $175

National NCL-2000 near new, inside and out. This has a passive grid input circuit and can be driven to full 2KW power with as little as 30 watts. Condition 9+ $400

CW-124/GRA-4 Military 40-foot sectional mast w/ accessories $90

Other items of interest:

B&W 51SB Sideband Adapter for the 5100 Transmitter Condition 9
$100 OBO

Several Collins 73SB3's recently refurbed Condition 9+ $500

Signal One CX-7 (better have your own electrical engineering firm to keep this one running). Condition 8 $800!

A large assortment of receivers, transceivers, KW linears at OK but not bargain prices (reduced on Saturday) at one dealers.

That was my first "real" receiver in 1960. Pretty good up to 20M, but
fell
apart badly above that.

They're fairly rare, but they are contemporary with the SX-28 which gets
all
the glory so the SX-25 is overlooked.

Fix it up with ceramic bypasses and reasonably fresh tubes and it'll
play nicely. Has a good audio output stage in it... two 6V6s I believe.

>THANKS, WALTER

Back when FM was becoming popular on VHF (late 60s) there was an ad
that appeared in QST for an FM modulator that plugged into the xtal
socket of your AM transceiver. For receive, we were supposed to use
"slope detection" (that never worked well on my Heath Two'er).

I bet you could find a schematic for such an FM modulator in some of
the older literature. An alternative would be to place a want-ad on
rec.radio.swap.

Date: 1997-07-28 00:00:00 UTC
From: vfo@worldnet.att.net
Message-ID: <33dbe8fe.2066882@netnews.worldnet.att.net>
Source record: 117643

I have a Hallicrafters S-53 receiver for sale. .54mc. to 30 mc. general coverage. Radio is in working order but needs bandspread stringing. Cabinet is in average condition. All other functions in working order.

Price is $45 + shipping.

If interested, please e-mail Bill: vfo@worldnet.att.net.

Thank you.

809. Swan HF station FS/Swap, also large qty. parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-28 00:00:00 UTC
From: kb2rmi@pop3.frontiernet.com
Message-ID: <5rh00n$10v8$1@node17.cwnet.frontiernet.net>
Source record: 117644
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Elderly ham unable to operate due to health reasons, so I am posting his HF rig.
Swan 500C, 117XC PS/Spkr., Shure 444 desk mike, homebrew RI tuner. 10-80M, cosmetics VGC plus, operates very well, in regular use up until 3 weeks ago, just a nice old broad-shouldered tube type rig, $250 plus the UPS from Rochester NY, or full/partial swaps for 2M or dualband rigs. My shack is too small to accomodate many more treasures or I'd keep it myself.

Also from the same shack, a large number of boxes of parts, rel;ays, caps, some tubes incl. what appears to be a new 807 and a new RCA 829B electron tube, endless wire leads/jumpers/etc, a Shure 450 mike, a couple of various power supplies and other unfathomable machines, literally thousands of parts here, start your own hamfest table. Included as well as a goodly qty. of antenna fixins, incl. a wide spaced homebrew 10M 3 el, at least one 11M 3 el., who knows what all else, all apart and mixed together but sure would be fun creating Frankenstiens monsters with all of the parts here.
Want to move it out, obviously local pickup only, bring your station wagon and some cash, or trade stuff? (old 2M mobile/HT, working 11M SSB stuff??) We'll come to terms. One thing, please, I do not want to cherry pick parts on request, 70 hr weeks just don't afford me that luxury.

Email replies please

816. Somebody align my Hallicrafters S40! (whine! ;)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-28 00:00:00 UTC
From: moo@NOSPAM.midtown.net
Message-ID: <moo-2807970136560001@sl3.midtown.net>
Source record: 117651

According to my records I've been trying to get my Hallicrafters S40 correctly aligned by somebody in the Sacramento, CA area since last December, but it still sits on my floor, unused, because of a -350kHz misalignment. I believe that this happened years ago when I had the dial string replaced (I hadn't used it for years until last November), and unfortunately the guy who did it is dead or retired. Somebody please help! (Tony Zugec, are you still out there?)

817. Getting my Valiant up and running

I have an HW-101 (no power supply) that I purchased almost a year ago to go with an SB-500 I had for2 meter SSB.

Never did get that project off the ground. I have since found an SB-500 set up for use with my SB-110.

I need to dispose of the HW-101. Never have operated it because of the above but it was sold to me with understanding that it was operational.

$ 135 plus shipping.

Apprasial:

Cabinet: Fair to good. Has few minor ripples. Easily removed.
Front panel: Good/excellent. Could pass a new piece.
Dial glass: Same as front panel
Knobs: Excellent, exept stand-by knob is not correct style.
Chassis: Very good. Dusty.
Manual: Original issue in Very Good condition
Unit was well constructed and well cared for. Needs detail cleaning.
Operates quite
well, although could use touch-up of alignment. All controls are
functional, and operate
freely. $70 + UPS

I have about 470 tubes in a box or 3, which were sold to me
as unused or used-tesated-good. some one, some the other.
About 25 cents each in the lot.

Some are weird. I want 100 bucks for the lot or a good
transcieveer in trade. U-ship. UPS shipping about 30 bucks.

I have about 160- tubes all used, untested, but for a half dozen
that I did test on a TV - 7U, and they were good.

I haven't even wiped off any dirt I didn't have to to get the numbers.

About 10 cents each in the lot. U-ship.

I have some radio gear, list on request, .

FOR SALE
CB equipment:
Browning Golden Eagle Mark III three pieces sold as a set $600.00 + shipping. Overall appearance is very good to excellent & it was working when removed from service. There are no books or microphone with it. Each piece has a metal case w/ faux wood grain covering. Front panel & markings on all three units are excellent. The only observed problems with these units are as follows: Receiver has a few light rust spots on the transformers & chs. Transmitter has few light rust spots on the transformer. SSB15 Transmitter has 1 spot of chs rust & there is a good deal of flaking of the faux wood grain case covering on top.

MARK Sidewinder SSB27: 2 units available at $100.00ea + shipping. Both have a metal case & the overall appearance of both is very good. No power cords available. 1:Blue case few paint chips & a few dings in the grille. 2: Brown metal case flaking. Factory(?) mod ASB11A adds adds USB AM.

HAM gear.
TMC FFR3 military receiver w/ 8-16mcs tuning drawer. Overall appearance very good. Rack mount. Top cover & power cord missing. Not tested. $150.00 +shipping

National receiver NC300. Overall appearance very good, some paint scratches. Not working, hum only. $200.00 + shipping.

Audio equip
Dyna Mark III mono power amp 1 available priced at $250.00 +shipping (or $190.00 w/o tubes) Overall appearance is very good to excellent, works very good. Has 2 brand new RCA US made 6550's.

Heathkit W5M mono power amp, 1 available priced at $195.00 + shipping. Overall appearance is very good. A little rust on cage, Chs is dirty but no appparent rust & markings are all very good. Some rust on the choke. Has 2 Genelex KT66's, works VG. Missing fuse & cap.

Rogers stereo integrated amp HG88 priced at $200.00 +shipping. Overall appearance is very good but brass front panel has many small spots on it. They will probably polish out ok. Made in London. ECL 86 outputs.. Works very good.

TUBES-All military boxed.
GL 8020 GE $40.00 +. 3 available
6U7G RCA $2.00 +. 15 available
12J5GT SYL VT135 $2.50 ea + 11 available.
717A Western Electric $20.00 ea. 4 available.
+shipping

Prices are fob Baltimore , Md. Offers will be considered on any of
the above items.

FOR SALE: odds and ends gear, cross posted to various groups.

Hallicrafters S-53A multiband SW receiver. Very good condition. band selector needs cleaning. $80.

Pioneer open reel (1/4" 2-track stereo) RT 707 reel to reel. in very good condition. I've hardly used it. $100.

Teac A-2340SX 4-track 7"X1/4" reel to reel. $250.
Matching Teac 2-A 6-channel mixer with MB-20 4-meter bridge, $80.
Will sell as a set for $300. Both work great. I have made some great demos with this deck.

Boss OD-2R dual overdrive pedal. In box, used only once, excellent condition, $50.

Boss RV-70 digital reverb. Occupies one rack space. Excellent condition. 1 yr. old. Original box and manual. $90.

Roland Juno-106 analog synthesizer. A classic. Perfectly functioning. $200.

Silvertone single-cutaway 6-string electric guitar. Logo is worn off, but it is definitely a Silvertone. Original sunburst paint intact. Not a Danelectro. Fretboard is a little bumpy. Stays in tune... mostly. The tone is warm and wonderful. There is no case, but I will ship safely. Would restore nicely. $100.

If you are interested in more than one of these items, I will cut you a deal. Photos can be available for all if you are seriously interested (I can send jpegs via email or snaps via snail mail.)

Buyer pays shipping, or maybe not, depending on your location and how much you buy.

Hi, this is Harry Miller KB6CGG in sunny California. Are there any audio afficionados out there who can give me an idea of what a fair price for the subject would be? The unit is in excellent condition and works perfectly. Tnx es 73 Harry KB6CGG

835. ** FS: NEW Sylvania 6E5 tube **

I have for sale a NEW Sylvania 6E5 magic eye tube, tested bright in my
Triplett 3444 tube tester.

I'm asking $15 + $5 shipping by air mail.

E-mail directly if interested.

Thanks and best regards.

836. SBE 33 with Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-29 00:00:00 UTC
From: hmiller@fix.net
Message-ID: <33ddc045.110063@news.fix.net>
Source record: 117538

Hi, This is Harry Miller KB6CGG in sunny California. I have the SBE33 with matching amplifier. I do not have the power cords. Does anyone have the schematic for these units? Or, does anyone know the pinouts for them as I would like to make power cords for them. Please let me know. Also, does anyone know what would be a fair price for them. The cases have been sand
blasted and a gray finish has been put on them which has been baked on (I don't remember what this type of finish is called) and they look great. Any help would be appreciated. Tnx es 73 Harry

LET'S SWAP boatanchors and/or parts!!

I am a ham hobbyist, NOT a dealer. I do this for fun,
not an investment!

I have a few things to sell/trade these days:

(Add shipping costs to all prices)

Vibroplex Presentation Bug - mint - $135.00

Eldico TR-75 transmitter. Classic 75m CW novice rig
with 6AG7-1625 line-up. Plug-in coils for 75m as supplied.
Originally used link coupling. Modified to pi-network, but
easily restored if you prefer. WIth manual, and in near-mint
condition, with covers. $95.00 plus shipping

B & K Model 701 Balun for 15 meters. 75 ohms to 100 ohms balanced.
Coaxial I/O to balanced I/O. Excellent $20.00

QTY 2 - mobile Approx 1945-era Motorola "Police Cruiser"
radio receivers; antiques, with 12K7 tubes and such.
No speakers. No manual or information. Great piece of radio
history! $20.00 each

James Millen Co. Model 90810 Transmitter - a CLASSIC!
This is a SERIOUS collectors' MUSEUM PIECE!!
11m, 10m, 6m, 2m bands with 3E29 final. EXCELLENT condition.
What a beauty. Copper plated chassis, Many refinements.
Inquire!

Hy-Gain mobile antenna / resonator for 80 meters. $10.00

Two BAKELITE clock radios as follows:

G.E. Model 535 (Uses the 12BA6, 35W4 tubes etc.)
Appearance good - untested - $15.00

G.E. Musaphonic, model 590 - with phono input etc.
Superheterodyne, uses 12AU6, 12AV6 tubes etc.
Appearance good - untested - $15.00

Tubes:
6GF7A - NIB
12AT7 Westinghouse NIB
12AY7 G.E. NIB
12AU7A by IEC NIB (I have two)

6GH8A Magnavox NIB
12AX7 RCA used (in box)
12AU7A Dumont - used (in box)
12AT7 Sylvania NIB
12AX7A RCA NIB (I have a few of these)
12AT7 RCA NIB (I have a few of these)
7025 RCA exc. used (in box) (I have 2)
12AT7WC ruggedized for JAN by Philips/ECG NIB
42KN6 Sweep tube, RCA used (in box)

Cornell Dubilier 2uF 3000V DC Oil-filled capacitor.
Other oil-filled HV capacitors available, inquire.

Lenox AM/FM radio digital clock radio (new)

A very LARGE 120V isolation transformer - about 1.5 kva
with taps, fuse panel etc. You figure out connections!
47 lbs shipping $50.00

MEMORY! Add 4 MB RAM to your IBM PS/2 computer!
4 MB 72-pin SIMM for IBM Proprietary MB - $15.00

Toshiba 4X CD-ROM drive XM5302B, untested - looks fine
With cable - $25.00

TEAC 4X CD-ROM drive CD-55A, untested - looks fine
With cable - $25.00

U.S Robotics WINMODEM 14.4 kB Internal modem with all docs,
diskette AND CD-ROM! For Windows 3.1 or WIN 95 only.
New, VERY nice - $20.00

Printer A-B Switch - New, with standard 37-pin Centronics Connectors.
Nice beige metal mini-cabinet. $7.00 each (have two)

16-bit sound card for ISA buss (PC compatible) computer
systems. Has IDE CD-ROM ports & cables. Mike input and
speaker outputs. Tested: Excellent. $15.00

Integrated Circuits:
339 14-pin QUAD Comparator
D8202A 40-pin
D8212 24-pin (I have 2)
P8155 24-pin
P8085AH (two)
MM53214GQK/N (20-A4592-026) 40 pin
30293E-026 (20-A4592-026) 40 pin
SY6545-1 40-pin
R6551P
D-2732A-2 EPROM (I have 1)
D-2732A-3 EPROM (I have 4)
27C64-G-15 EPROM (I have 3)
27C64-30 EPROM (I have 3)

D2764A-3
SRM2064C15 Dynamic RAM (I have 7)

I also have several linear and TTL/CMOS smaller
14 and 16-pin DIP chips. Inquire.

Bass Guitar - by Washburn - copy of Fender Jazz Bass. VERY nice.
Sunburst color, two pick-ups. MINT condition. Worth about $220.00

Acoustic guitar, Spanish - superior quality. Emperador
Model TC-80 made in Korea. With carrying case Truly a beautiful
instrument, and has to be worth at least $100-120

WHAT DO YOU HAVE??
MAKE ME AN OFFER!!

E-mail me please at:
bry@mnsinc.com
==========
I need:

Radiotron Handbook, 3rd of 4th Edition OK.

DRake TR6 or other 6 meter gear.
R390, R390-A receiver or similar.
R-1155 receiver.
T-1154 transmitter.
AR-88 receiver or similar.
R-109 receiver from Britain post-WW2 era.
AN-GRC-109 transmitter.

949 Tube socket Adapter kit for I-177B tube tester

ANY BOOKS from 1930-1970 about ham radio construction.

Tube manuals, etc.

* EARLY "Radio" magazines from California 1930s.

* OLD 73 magazines from the first few years.

* OLD Lafayette Catalogs

(These three above (*) are for a friend G3UUR)

QTY of TWO or FOUR: 6-pin sockets for 1625 tubes
QTY of TWO or FOUR: 5-pin sockets for 807 tubes
QTY of TWO or FOUR: 4-pin Bayonet sockets
807 tubes
811A tubes
828 tubes
572B or similar tubes

1 watt and 2 watt resistors

FT-243 (or other holders) crystals for 1800-2000, 3500 - 3750 kHz,
3880, 3885 & 7000 - 7150 kHz, 7290, 7295 & 8400 kHz

PL-259 / SO-239 connectors

Capacitors: MICA, MYLAR, Electrolytic etc.

Variable caps & trimmers

Any useful AF/RF tubes...

Audio transformers.
Driver/Interstage transformers, Single-ended
and P-P Output transformers

6BR5 (same as EM80)
1614
7984
6GK6
6973
6146A
6146B (need several)
5R4GY
6DE7
6CL6
811A

Any old sweep tube linear amp. - dead or alive.

FT243 crystals for 8400 kHz

SO-239 and PL-259 connectors

Viking Valiant
Ranger II

Any good straight key.

I would like to swap for any of the above items.

Greetings -

The following Test Equipment has not been tryed except where noted. All shipping will be from zip 98837. I'm open to questions, offers, or trades.

1. Accurate Instruments, Inc. GENOMETER Model - 156
250 Khz to 120 Mhz Signal Generator with sweep and tone.
$25

2. MILITARY - RF OSCILLATOR Module for a AN/SRT-14 or -15 or -16. New, never used spare in packing box. Complete with tubes and 100 Khz crystal in a very nice oven.
$25

3. EICO - Signal Tracer Model - 147A with calbes and probes
Eye tube and lights brightly and seems to work
$25

4. MILITARY - TUBE SOCKET ADAPTER KIT MX-1258U
Metal Case with Book in lid. Consists of 7 various sized tube socket plugs which allow monitoring of each pin from the top of the chassis.
$15

5. MILITARY - TS-505C/U VTVM. Untested and dirty. Looks complete with probes in lid of metal case.
$20

6. MILITARY - A/N PRM-10. Very Nice 5 tube Grid Dip Oscillator. Complete in metal case with all coils, no book. Looks old, but very good condition.
$50

7. GENERAL ELECTRIO - Gernanium Diode Tester Model 45T12A1
Complete in Case.
$20

8. MILITARY - TS-375A/U RF/DC VTVM of some kind. No probes and lid of metal case in missing.
$15

9. MILITARY - TS-505D/U Output Meter in Metal Case.
Complete
$15

73's Bob W7VZX

842. PM-s Power Supply problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-29 00:00:00 UTC
From: U M Edwards <lumway@atl.mindspring.com>
Message-ID: <33DE56B9.69D5@atl.mindspring.com>
Source record: 117544

I have a PM-2 power supply for a KWM-2a (which I just acquired). The radio works fine but two of the wire wound resistors in the power supply melted down. I would like to know the value of the two wire wound resistors that are the left and next to left on the brown circuit board if the power supply is viewed from the rear and upside down. They are 5W and 10 watt restectively and the 10 watt is probably a 200 ohm.

The primary service is government. 170.245 is a specific freq allocated
on a secondary basis for wireless microphones.

Fellow Boatanchorists:

I have been known to forsake the sunny clime of Northern California and put on my parka, hitch up the dog team, and head north to Tacoma, WA (You may be more familiar with Tacoma's northern suburb, Seattle.). I have been known to range as far south as Portland, OR during my trips.

Any BA-related spots worth a visit?

Thanks

Mike Fallon

In the UK that part of the band is in the transmit section of the PMR band, with the RX section around 166MHz. I also know that the British military use AM on about 170.0125MHz.

Most VHF xtal-controlled rigs for the 2-meter band should be re-tuneable up there, possibly needing the odd capacitor/coil reduction if it cannot be tuned exactly. Replacing ferrite slugs with brass will often do the trick too.

I have some 2-meter stuff on my homepage, but it is somewhat limited (ZN414 receiver and a simple FM transmitter) for your application.

most studio grade wireless mic systems are using it.
they get 4 "channelized freqs" and the above freq is one of them

I've seen them for 200 in the parched and dry midwest, I would not pay over 100 personally, but even that would make me shudder unless I had to have one- 50-75 bucks and it's a good deal 100 is fair over that it's up to you! They really aren't that good and I would rather have an ST-70 anyday or especially a little Scott int. amp with EL-84's and then find a good tuner to match --if! I wanted an inexpensive tube amp.

Hi Leon,

The SX-25 is a nice General Coverage Short Wave radio. I had one back
in the 1970's and really loved it. It is not that rare. I've got an
SX-28 now that's the same vintage but the "top of the line" for
Hallicrafters in that era.

Source record: 117559

For Sale: Murch UT-2000A "Ultimate" 2KW antenna tuner in excellent condition. This is the classic "SPC" antenna matcher built out of two custom-designed, beautifully-made high-power wide-spaced variable capacitors and a gorgeous heavy-duty roller inductor driven by a real turns-counter dial (not a cheap belt-driven cassette-deck counter.) Nobody makes a serious-power matcher like this one anymore, the high-end $400+ MFJ and Tucker (or whoever they are now) products don't even come close -- they'll melt down before the UT-2000A even gets warm. This is a basic meat-and-potatoes antenna tuner -- no SWR bridges or coax switch. Cabinet is in very good condition in its original dark green hammertone finish, chipped only slightly on a few edges. Innards are perfect. If you want a classic high-power matcher in excellent condition to go with your classic station, this is the one. $95 shipped prepaid to any address in the continetal USA. Email Rick WA6NCX at <remler@LL.mit.edu>.

>
> George McCouch
Yes, these are collectible. They were made for several years and also
came in several colors with black being the most common. It's value is
very dependent on condition. If it was damp and got rusty it might not
be worth much. If it is in nice condition, it could be worth several
hundred dollars. More if it is blue or red.

862. Re: NEED INFO AM TO FM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-07-29 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.970729130351.24013B-100000@Ocean.CAM.ORG>
Source record: 117564

There were plenty of articles in the ham magazines in the late sixties
and early seventies on using those old AM tube rigs on FM, around the time
when FM was becoming very popular due to surplus and then new commercial
stuff, and people wanted to put their AM rigs to use.

The popular suggestion for receiving was to use slope detection. In other
words, don't convert it, but by tuning off to the side, the signal
lands on the slope of the receiver's selectivity. As the FM signal
varies in frequency along that selectivity slope, the signal varies
in amplitude. It is this variable amplitude signal that the receiver's
AM detector can handle.

Of course, this worked well with those old tube sets, since they did
not have sharp selectivity. The scheme would work less well with better
receivers that had sharper filters with a better shape factor.

The step beyond that was to add an actual FM detector. Hook an
FM detector to the final stage of the receiver's IF amp, and then
feed it's audio output into the receiver's audio channel. There were
a wide range of circuits published back then. Similar circuits, though
using IC's, could be found in articles telling you how to convert CB
sets to 10 meter FM. An I circuit would make it easy to add FM, but
do it in a fashion that could easily be removed.

One thin to remember is that many of those old sets used relatively
high frequency and non-standard IF's. You'd have to find out the
sets IF frequency, and then build an FM detector that matched that
frequency.

I'm not sure how well they deal with narrow band FM, but I've come
across many a tv set in the garbage with the audio (which is FM)
detector on a small module. They operate at 4.5MHz. I think RCA
especially built their sets this way. It has one or two coils, and
a CA3065 or similar IC FM detector. You may be able to pad them
down to the transceiver's IF by adding some capacitance across the coils.

I haven't tried this, but it is a possibility to look into.

Finally, if the set happens to use a 10.7MHz or 455 KHz IF, you might
try using a 49MHz walkie talkie (a superhet, not a superregenerative) or
perhaps a cordless phone. These have FM detectors. Feeding the
10.7 or 455 signal from the transceiver or receiver into a suitable
point in the walkie talkie or cordless phone's IF strip would give you
a detector plus audio amplifier.

As for transmitting, there were two methods suggested. One was to build
an external adapter that fit into the crystal socket. The adaptor would

have a mic preamp, and an oscillator. Either the oscillator would be FM'd directly, or the signal would pass through a phase modulator on the way the transceiver's crystal socket. Make sure the set's modulator has been disabled somehow.

The other method was to move the output of the modulator away from the PA and use it to modulate the screen grid of the transceiver's crystal oscillator. This would FM the oscillator.

So look in old CQ's/QST's/73's from the early seventies and you're bound to find specific circuits

This is a Kenwood TL-922 amp that had a small fire. It can be easily repaired. As far as I can see the filament transformer shorted and burned the metering board. Everything else is fine. The two 3500Z are also fine. The RF board is fine and so it the main transformer. The repair would be to buy a metering board and filament transformer. It would make a great legal limit amp. Best Offer over $400 By Aug5 Chris

The 170.245 MHz frequency is governed under FCC Part 90, 90.265.a/b. It is usable by eigibles (Sec.a; Power, Petroleum, Forest Products, Special Industrial, Business and Railroad Radio services) for low-power, wireless microphone operation subject to the following:
1. The emission bandwidth shall not exceed 54 KHz
2. Output Power shall not exceed 50 mw
3. Stability shall be +/- 32.5 KHz of assigned freq.
4. Unprotected from interference from other licensed operations in the band. If Government or non-Government users are interferred with, operations must cease. Also, applications are subject to Government (Federal; other than FCC) coordination.

Summary, if you're not one of the listed elgibles, its not legal. However, given the Friendly Candy Company's record of enforcement in the amateur bands, it's likely you could put up a KW wireless mic and never receive a notice of violation. Only public safety frequency interference is still treated as a serious matter at the Commission nowdays.

Hope This clarifies.

Regards,
Rick Tannehill, P.E.
Ariz. Dept. of Public Safety

For Sale:

K.E. Electronics "SQ-Auto" integrated Keyer/Paddle.

This is a combination unit - Iambic / Squeeze paddle
built into an enclosure which also contains the
keyer Electronics and Monitor Speaker.

Front panel controls include keyer speed, monitor
volume, and "Tune" position for transmitter tune-up.

The keyer uses a relay, so it will work with your
boatanchors as well as your newer gear.

Cosmetically very good condition.

$65 plus ups.

Hello Walt..
You can still use it. There are a lot of people on 6m AM..
Go and check out my web page...
http://www.geocities.com/Hollywood/5860/50am.html

It's all about a 6m AM test a bunch of us all over the USA are doing.

And the Old Knight radio is a good one.

Source record: 117668
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

For Sale, National NC-66 receiver.

The NC-66 is a semi-rare radio. It's a compact (about 11x8x10) AC/battery radio, probably designed for use in home or boat. Has long wave, AM, and 3 SW bands.

This one also has the optional RDF-66 direction-finding box, with a compass
rose, null meter, and a cool sleek plastic rotating loop antenna.

Both are in perfect condition, not a scratch, no sign of modifications or repairs, works well.

$95 for the set (or best offer)!

917. Harvey Wells Bandmaster

Source record: 117669

Hello,

I was recently given a Harvey Wells Bandmaster Senior TBS-50C. It
came with a photocopy of the manual. The radio appears to be in good
to very good condx other than it is missing the antenna connector on
the rear panel. A look at a pictorial diagram in the manual, shows
that it appears that the antenna post is of the porcelain standoff
type. Question is, where can I obtain a replacement to bring the
radio into original condx? Also there is a holder on the front panel
for a card that holds band tuning/xtal multiplication table? The card
is missing.Anyone have a source for the card or is that unobtainium?

Thanks for any help and 73,
Jon WS1K

Now Jeremi has a sense of humor !

A single frequency transmitter with a PLL..... :-)))

and Paul probably doesn't have a clue about crystals and multipliers.
:-(

I would recommend the Amateur Radio Handbook produced by the ARRL except
he would probably end up building a PLL based transmitter.... :-&

PAUL <-- get yourself a 9.458 crystal, then build an oscillator
followed by one doubler and two tripler amplifiers. Viola! you are
transmitting on 170.244 MHZ. A simple tweak of the oscillator tuning
capicator later and you are on 170.245 - sans modulation - cept maybe
some HUMMMMM if you don't have a stable power source..... :-)

Hello all,

Once again I'll be out Calling CQ on 50.400 AM

Sat and Sun..10:00-20:00pdt (17:00-03:00)z

I'll call CQ on the hour and on the half.

Last time I had a tree trimmer running his grinder all weekend.
Had too much QRM and s9 of ac type noise.

There were a few opening though.

Lets hope for a good "open" weekend.

If you want more details on the 50.400 AM test Check out my home page.
http://www.geocities.com/Hollywood/5860/50am.html

Also I'm running a Swan 250/60 watts/Vertical ar-6/

There is a lot of info there.

Thanks everyone!

The RS wireless mike kit can be modified to transmit on 170.245.
Instructions on how to do this can be found in the book NOW HEAR THIS
by Winston Arrington and CRB use to carry it. The schematics Mr.
Arrinton discusses in detail are the same basic circuit of the RS kit.
BTW - The book gives schematics to modify a xmitter from 30-300mhz.

Here's another neat radio....

An SBE-33 hybrid transciever from the late 1960s that has solid-state circuitry except for the driver and final stages. I always liked the nice stainless front panel and the cool blue trim they used. Cosmetically this rig is about 8 on a scale of 10, electrically its fine. Includes manual copy. AC power supply is integrated so it plugs in anywhere.

If the case were painted the radio would be a 10! Its the same color as the Yaesu FT-101 series radios.

Price is $150.00 plus UPS.

Please reply by e-mail if interested.

941. FS: Neat WW-II US Navy Receiver Test Set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-02 00:00:00 UTC
From: mc@shore.net
Message-ID: <5s0isk$rki@northshore.shore.net>
Source record: 117693
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This is a super item - - -

US Navy Bureau of Ships Radio Receiver Analyzing Equipment Model OE-3

Built by Weston Electric, Newark NJ, probably pre WW-II.

It is housed in a nice oak box, 18 1/2" x 9" x 5"
and consists of the following:

Selective Analyzer Type 3 (which appears to be a Volt-Ohm-meter)

Capacitor Meter 664

seven tube socket adapters for various tube bases that allow measurements
to be made from the top of the chassis with the tubes in place. Simply
remove the tube, plug in the test adapter and plug in the tube.

test leads and line cord for the Capacitor Meter

Instruction cards for the Selective Analyzer and Capacitor Meter.

This test set is a beautiful piece of vintage Navy test equipment that
is still useful today when working on receivers such as RAK, RAL, etc
that use octal and earlier tubes. It does not contain any test adapters
for 7 and 9 pin miniature tubes which had not been developed when this
set was used. The case and handle are in excellent condition as are the
pieces inside. The wires on the test leads could use replacement but
that's al

This item has been in my collection for several years but I have come
to the conclusion that I won't use it as I have none of the equipment
it was designed to analyze. Therefore I have decided to sell it.

Price $85.00 plus UPS/shipping charges. If interested please reply by
e-mail.

Source record: 117699

Hi,

My SP600 had dial slippage. I have cleaned, increased spring tension etc. Does anyone know where I can get dial train parts? Most of the slippage seems to be due to a worn right hand (bandspread) logging dial plate. If I can't find parts I'm going to torture this radio. Help prevent torture to a boatanchor!!!!!!!

Thanks

Nice looking (and working) 2.5v tube model SW-3 receiver. I believe the coil sets I have are a general coverage set covering 160 and 80, a set for 40 and a set for 20m. I have some photocopied info on the rig including some Bill Orr article reprints, a pamphlet by James Fred (complete with coil winding info) and I have two sets of blank James Fred repro coils. Comes with a breadboard solid state power supply.

Top serious offer takes it.

Will be shipped from my WV home when I arrive for vacation late this month.

From: W6RUY <friday@ccnet.com>
Message-ID: <33E53F52.B505DC02@ccnet.com>
Source record: 117479

I have an Hammarlund HQ170 that I'm thinking of selling. I'd like to get $200 for the receiver. It is in good condition, all tubes checked ok, 8 bad tubes replaced with new ones.
No clock (sorry), mechanically and electrically receiver is in great shape. Front panel and cabinet look good, all knobs, panel lettering, etc., very good.
Include shipping from California to the $200.00. So I'd say $230 will cover all including insurance.

SWAP HIGH END NEC LASER PRINTER FOR HICKOK TUBE TESTER, for example, 752, 752A, 539C, TV-7D, TV-10, B&K 747, TRIPLETT OR OTHER DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER, ETC.

NEC Postscript Silentwriter LC 890 Model, 8 PPM, 2 MB Ram, 300 DPI, backlit two character lines LCD option menu screen, external print density control, dual letter & legal sized paper trays, dual printer ports (PC or Mac compatible)--same as the HP Postscript high end office model that's about $1200 right now and the only difference is the HP is 600 DPI. I can't tell the difference between 300 & 600 DPI. NEC NEEDS MINOR REPAIR.

IF YOU HAVE A HICKOK OR SIMILAR UNIT THAT YOU WOULD LIKE TO SWAP, LETS COMMUNICATE. Incidentally, to add the Postscript option with all those nice Adobe fonts to a basic laser printer usually adds $200-$400 to the base price of the printer (licensed Adobe fonts and extra memory required--these Adobe fonts are not in the Windows True Type fonts, but show up only when you have this Postscript printer listed with the ability to print them). Hopefully, you'll be in the Ohio (northeast area) so you can inspect it in person to avoid shipping costs for both of us. It's heavy and not a cheap light duty type printer.

You can email me directly at:
l.mclaughlin@popmail.csuohio.edu

Thank you

Several months ago I received a card from Surplus Sales of Nebraska saying that they would reserve a copy of their great new catalog for me if (only if) I would send $5. I sent my $5. After waiting a couple months, I wrote a letter asking them to either refund my $5 or send me the catalog. No response. Then I received another card from them saying the catalogs would be shipped in July. Now it's August. No catalog. No $5. Has anyone else had this experience. Have we all be ripped off?

982. Wanted: TS-520 - LOTS to trade for it!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-04 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <5s5o8agfr1@texas.nwlink.com>
Source record: 117412
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello all,

I am looking for a good, clean TS-520 with 12v power supply
to use camping and portable. I am short of cash and need
it before the end of August if possible. Don't need digital
readout, external speaker, remote VFO, or any other accessories.
Prefer the 160-10 model, but 80-10 is ok too. Looking for
a quick deal.

I have the following items to trade, in any combination that
works mutually to swap for the TS-520

The prices next to each item are the trade value I have
attached. These items are NOT (repeat NOT) for sale -
only as trade stock for the badly needed TS-520

Drake 2C - good condx. $125
Hammarlund HQ-100AC w/clock good condx $125
Swan 250 with ps/spkr - good rcv.
transmit unknown $165
Realistic DX-302 receiver $75
Hallicrafters S41G (rare) works(poorly) $45
Heathkit HW-32 (not A ver.) untested $45
HTX-100 10m SSB mobile rig works great $125
Globe Scout 680A - fair/good condx $75
Heathkit DX-40 - very good condx $75
Heathkit VF-1 VFO - untested $45

Samson 200mhz True diversity wireless
microphone system with clip-on lapel
mic. Like new - original box,packing
Recently had factory-installed replacement
mic capsules. Great for churches,
wedding videos, classes, lecturers,
etc. Cost over $400 new Have 2 $150 ea

DeVry Tube Amplifier - portable WWII era
unit designed to be used with movie
projectors. Dual 6L6 output - 6 tubes.
Excellent (collector) condition. email
for more details if interested. $165

I value a good working TS-520 with no accessories
at between $225 and $300, depending on exact
model, condition, etc. If any combination of

the above floats your boat, drop me a note.
Must be a working unit, with 12v option. NO
junkers please.

I pay my shipping, you pay yours. (USPO unless
UPS is over strike and settled down).

Again, NONE of the items is for sale!! Trade ONLY.
No exceptions. I wouldn't trade if I didn't need
a TS-520 right now! Might also consider Atlas 210
or other PORTABLE hf rig of comparable value (cheap!)
with good output (no QRP).

Again, need QUICK deal! Dig in that garage and drop
me a note. Can also add SOME cash to an item to
float the deal.

Thanks,

Dave WB7AWK

From: Larry Tucker <sts@ac.net>
Message-ID: <33E6873C.2932@ac.net>
Source record: 117413

Hello,

I have for sale a Hammarlund HQ170 Ham band receiver. This is from a silent key estate. The radio is in good condition and plays great. Rig is clean and complete. A super resotration project as all you need to do is a shine up. Covers ham bands only with inputs for 6 and 2 meter converters(dial is claibrated for 6 and 2).

A great old radio! Price is: $125.00 plus shipping.

Other items for sale from same estate:

Heath SB401 transmitter(may or may not work) with manual. $50.00
401 is complete with all tubes and looks good. I have
not had time to check it. It does come on and tubes all
light.

Hallicrafters external VFO model HA-5. Illuminated dial calibrated for 80 thru 2 meters. Looks nice. May or may not work $35.00

KnightKit P-2 SWR/power meter. Nice little kit with manual $20.00

D104 mic. Chrome. Chrome is good but could use shining. $35.00

There is also buried in all this a NEW TS850SAT. USED 3 TIMES BEFORE HE GOT SICK. ABSOLUTELY PERFECT!! HAS TUNER. ALL BELLS AND WHISTLES. IF INTERESTED LET ME KNOW. IT IS LISTED ON rec.radio.swap
$1100 plus shipping. With mic, manual and original boxes. He bought it in '96 for over $1700 and never had a chance to use it. A real gem!

If interested in any of the above please contact me at: sts@ac.net

>let me know what you need also reply direct to wa2hfi@ix.netcom.com
>I don't check into the newsgroup often enough.

Just for clarifacation, it is 6NO(oh, not zero)75. the NO stands for Normally Open. This is an Amerite part number indicating a 6V heater, normally open, closes ~75 seconds after power is applied to the heater.

The counterpart is a 6C75. C for normally Closed.

A "T" on the end would indicate a miniature tube envelope, so this would be the octal version.

That poor 5100 is being driven to it's death at 200 watts, if you can really get that much out of it ! I've got a 5100 / 51SB combo and never drive 1t past 100 watts (ala Bird 43)so I can keep it alive and well for a long time !
The 5100 is my favorite xmtr, and I'd part with my Valiant, Ranger or DX-100B, before the B&W ! It's only shortcoming is missing 160 meters !

I am looking for the following parts for a Collins 51S-1 receiver:

1. 9 pin AC power cord.
2. Trim ring (go's around face of the chassis).
3. Operating manual (for Collins 51S-1 receiver).

If you have any of the above items, and would be willing to part with them
for a reasonable price, please reply via E-mail: GBabin73@aol.com

Thanks for taking the
time to read this,
DE N5MCJ (JERRY) 73!

1001. Collins and more for sale....

Hi,
Selling much of my ham gear to pursue another priority.
Please visit my URL for more information. Email if you
can not access the web site -- I can send a summary
via email in HTML format too. I'm told the link is slow
especially if you use AOL as your ISP.

http://www.transend.com.tw/~joentam/forsale.htm

thanks,
Joe

1002. FS: Hammarlund S100 speaker

Newsgroup: rec.radio.amateur.boatanchors

I have a Hammarlund S-100 speaker for sale. Cabinet has no extra holes or dings in it. There are some minor scratches, and a small surface rust spot on the top of the cabinet. I'd like $45 plus shipping. This is the smaller of the 2 speakers Hammarlund made for the later receivers. 73, George.

1003. FS: Large lot of vacuum tubes!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-04 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5s4hg8$pqv@sf18.dseg.ti.com>

Greetings to all!

I have the following vacuum tubes for sale to whoever makes
me the best cash offer for them. I bought a couple of small
estates recently and these tubes were part of those estates.
I kept what I needed, and the rest must go.

Here are my sale conditions:

- Buyer must take them all as a lot, no separate sales.
- Buyer must pick them up in person at my home, which is
about 30 miles north of Dallas, Texas.
- Buyer must pay me in cash.

The ones under the "TESTED" header were tested by me using
my Sencore Continental MU-150 tube tester. The rest of them
are untested - I simply ran out of energy and desire! :)

The list is below... look it over... make me an offer!

73,
Dean K5DH

1009. RME and swapmeet stuff

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-04 00:00:00 UTC
From: Ed Zeranski <ejz@nosc.mil>
Message-ID: <01bc9f77$9830f080$a8f1adce@ejz.nosc.mil>
Source record: 117503

I hit the Santee (San Diego) swap this morning and came up with the following:

1: octal and 11 pin plugs/sockets with backshells and a grunch of old grey HeathKit knobs, reference xtal for Gertsch freq meter...$3 total! Bonzer nuetrallizing cap, BC-375E??, at .25 just too nice to pass up and already given to Doug WA6VOV.

2: Another BC-221(1942 contract, '43 delivery), but in a metal case w/manual, original spares, and ye olde BA sniffs...$5 My other has a wood case.

3: Question item, RME152 VHF, actually 10/6/2, converter. Does anybody have knowlege or experience with this? I don't need it but it was too neat to pass up. Also, does anyone know about an RME MC55 mobile converter? Picked one up a while back also 'cause it was in good shape, cheap, and looked ...well..like it needed to be in the shop with the other orphans. Thanks folks!

1010. Amperex and RME info???

:::::::: YAESU FT-101E ::::::::
HF TRANSCEIVER

SERIAL NUMBER:

* 7 L 300489 (October, 1977)

STANDARD FEATURES:

* 160-10 meter AM / CW / SSB
* RF speech processor
* Noise blanker
* Original owners manual

YAESU OPTIONS INSTALLED:

* 600 Hz CW filter
* Cooling fan

To give some meaning to the rating of the condition of this set, I
have assigned a rating in accordance with the Collins Collectors
Association Technical Data Sheet G-0196. In its present condition,
my FT-101E meets all the requirements for EXCELLENT CONDITION as defined
in that data sheet. In addition, the unit meets all original Yaesu
operational specifications.

* No modifications!
* No scratches!
* No stains!
* No worn areas on front panel paint!
* Never used mobile or portable!

I have not assigned a selling price, since I am not sure what the EXACT
selling price should be. I have seen this rig in this condition
advertised as low as $325 and as high as $400. I will respond to any
reasonable offer.

Please add $20 to any offer made, to allow for shipping and insurance via
UPS [assuming that UPS settles their differences with the Teamsters!].
If not, I can arrange shipping via other carriers.

Please e-mail if you need additional information on this radio.

Circuits on packet

Hi all, Ron (G0TLA) has spent a couple of weeks here
in Sweden fixing up my own QRP PMS (Personal Messaging
system) on the packet radio. My site is a mirror of
Rons PMS from which you can download loads of circuits
for antennas, transmitters, receivers, etc. The packet
address of the two PMSs are:

G0TLA @ GB7NND.#23.GBR.EU
SM0VPO @ SL0ZS.KISTA.AB.SWE.EU

Again; NO fees, memberships, registration or any other
impediment is required. All files can be automatically
by ANY licenced radio amateur.

To access, send the following packet message:

To request DIR of files or directories

Command: SP REQDIR@G0TLA.GB7NND.#23.GBR.EU
Title : QRP @ [insert your own bbs here]
Message: /EX (or Ctrl+Z)

or

Command: QRP REQDIR@SM0VPO.SL0ZS.KISTA.AB.SWE.EU
Title : QRP @ [insert your own bbs here]
Message: /EX (or Ctrl+Z)

To request file (example QRP/ANTENNA/70CMJIM.GIF)

Command: SP 7PSERVE@G0TLA.GB7NND.#23.GBR.EU
Title : QRP/ANTENNA/70CMJIM.GIF @ [insert your own bbs here]
Message: /EX (or Ctrl+Z)

or

Command: SP 7PSERVE@SM0VPO.SL0ZS.KISTA.AB.SWE.EU
Title : QRP/ANTENNA/70CMJIM.GIF @ [insert your own bbs here]
Message: /EX (or Ctrl+Z)

You can also find loads of files and even pictures of
finished projects at:

http://user.tninet.se/~acz732k/
http://hem2.passagen.se/sm0vpo

Best regards Harry (SM0VPO) and Ron (G0TLA)

terry
if you'll go to your local hardware store or camping supply
or maybe army surplus and look for the COLEMAN lanturns
the glass globe works very good for a 3-500 chimney
they make two sizes,,,, pick the one that works best for you
A HO LOT CHEAPER THEN A TRUE CHIMNEY
but works just as good"" temperd glass"
good luck joseph

The VT4C was a rugged type 211 tube. It was used in WW2 in the BC-375 and BC-191 transmitters. It is a triode with a 10v (think 3.25a) filament.

The following military surplus is for sale. If you are interested, email me and I will dust off the gear, test the tubes, let you know the condition, and set price. If no response, I'll gut out parts, save tubes, and send the remains to the land fill. Will sell separately, even sell separate receiver plug-ins, or sell as a set with the spare transmitter. Also, let me know if you want copies of specific schematics or buy the whole book. I believe that this equipment was known as the AN/VRC-12 series. (I suggest that I only ship after the UPS strike ends.)

CY-938A/VRC Cabinet, Electrical About 19 x 17 x 13 inches

Might I suggest you look for a TS-120 or TS130S. They are 12v radios and smaller and draw less current than the 520. They also sell for ~$300..

I like make offer for the following reasons.

1) It allows plenty of time for news propagation.
From a buyers perspective, why should the guys who read news
24 hours/day or sit on the backbone get all the deals.
From a sellers point of view, why should I lock myself into a
price for something when I might get an offer of an interesting
swap or a better $ offer from someone who only reads news casually.
2) It's fun corresponding with people about the junk and I do this
for fun.
3) A bit of correspondence in arriving at a price allows for a better
deal in that the buyer and seller end up with a clearer understanding
of what each is offering.

I'd rather see:
EF Johnson Navigator. Make offer.
than:
EF Johnson Navigator $100.

Because, the $100 unit is going to be gone by the time I see it.
At least with the 'make offer' sale, I have a chance to offer,
"I'll swap my Thunderbolt for it"

That said, I may switch to the whoever comes closest to my wanted $
without going over within X days approach. I saw this recently on one of
the reflectors with a 'key' sale and it was a lot of fun. When all the
offers are in, they are all listed (without names). I'd add, "swaps
considered" though.

Anyone participating in a make offer dialogue who is offended by low
offers is taking themselves too seriously.

-bob
wb4mnf

Now for something a bit more topical.

See some electronic debris at:
<www.atl.org/surplus>
There are prices but I'll consider any and all offers, especially
those involving radio or radio related debris. Radio parts, RF test

gear (I need an impedence bridge), a TI or Motorola DSP SDK with
eval board, or ???? (I need a roughing pump for the Electron Microscope)

Have a Rohn 45G anticlimb.
Swap for 25G anticlimb plus 25G straight.
Local only.
See photo:
<http://www.atl.org/antennas/rohn.jpg>
Have 2 x quad spiders for 3" boom, swap for 3" boom to 2" mast
bracket suitable for 40' boom or enough $ to buy one.
See photo:
<http://www.atl.org/antennas/SPIDERS.jpg>
Have HT-37 and original manual and will include a vintage Olsen
Bullet microphone in original box.
Swap for Ratty but complete Navigator.
No Photo yet.
Have 4-1000, 4-1000 socket, 4-1000 fil trans. all unused.
Also have used 4-1000 with output down to about 80%.
Swap for Navigator or.
4 x NOX 4cx300 plus 2 x 4cx300 sockets and chimneys plus
1 x filament transformer good for 2 x 4cx300.

I don't agree with you at all. I have received far more than I thought my gear was worth by having others make offers. I find that often, what I have is worth more to the other person than it is to me. And, 95 percent of everything I have offered has been sold.

If my "make offer" messages bothers you, use your "delete" button. Its as simple as that!

Amen!!!!!, Brother Dave.

> Don't give me the "I don't know what it's worth!" garbage, either.

Try this,...what if you just found out you had a month to live,....I bet you could tell your wife/family/estate what it's worth was.

And the being "fair to everyone" part because everyone gets a "chance" is amusing. How many people put up a sign behind their table at a swapfest saying, "Nothing sold till 12:00 noon so everyone can get a chance to walk by, see my stuff, and come back then so it can be auctioned off to the biggest ego with the deepest pockets"?

Every time I have participated in an "offer" or "bid" situation I have had exactly the same result as when I once tried to teach a pig to sing,...not only did I waste MY time,... but I annoyed the pig.

And yes, I know full well how to use the "delete" key,.. and do.

Whoaa,... I stumbled and fell over that soapbox!

I'm afraid I have to agree with you Dave. I am new to the boatanchor craze but it really is a nuisance to read FS posts and see the "make an offer" bottom line. That kind of mentality belongs in the auction house from my viewpoint. I'm not being nasty, just expressing an opinion.

Hmmm. I haven't tried ordering a catalog. On their Web page
(http://www.surplussales.com/index.html), they say that they've just sent
the catalog to the publishers (August 1st) and have 30,000 copies to mail
out. The publishers must have demanded all those $5 bills in advance.

1038. contact cleaner cleanup....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-05 00:00:00 UTC
From: Joe BV/N0IAT FITR <joentam@transend.com.tw>
Message-ID: <33E6DE45.70C@transend.com.tw>
Source record: 117441
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hi,
Bought a US$10 aerosol can of contact cleaner. Used it
on some gear and it fixed a relay problem for about 10 days.
Now, I notice the metal contacts have a green film on
them, and the relays are again intermittant. The film
is transparent, not opaque, so I guess it is a residue
of the contact cleaner rather than oxidation.

Can anyone suggest a contact cleaner that leaves NO
residue, yet rids oxidation of exposed
metal contacts? Does such a beast exist? The stuff
I bought is from Germany, called Kontax if I recall.

I have tried DEOXIT with a similar result. Could the
base metal be causing the problem?

thanks,
Joe

1039. ARRG! No more "MAKE OFFER"s for Me!

Source record: 117442

OK...I'm going to rant and rave about something.
This isn't aimed at any one person. Everyone has done
this, most innocently, and this is just a "cumulative"
rant at the practice. I've been wanting to vent about
this one for a long time so here goes....

I will never, never EVER again respond to a "MAKE OFFER"
posting! It's just not fair to expect me read what
someone else thinks their stuff is worth through
telepathy or shaking the bones or voodoo or chicken feathers
or whateverthehellelse they want. Don't give me the
"I don't know what it's worth!" garbage, either.
I don't know what ANYTHING is "worth" in that context.

Let me give you a clue:
There is no "heavenly market" in the sky where cute little
pixies scribble "Today's KWM-2 value: $500" on a magical
chalkboard, which buyers and sellers can telepathically
read if only they are pure of heart.

Here's what your stuff is worth, people: It's worth
JUST EXACTLY WHAT YOU DECIDE IT IS, *IF* SOMEONE ELSE
AGREES WITH YOU! If someone else doesn't agree with
you-- guess what?? You're WRONG and you need to rethink it!
And that means it's different every single time.

And here's another tip for the pricing-challenged:
No matter if you get $1200 for your beat-up KWM-2
or $12 for your mint TR-4, some "friend" is going
to tell you how you got screwed and could have
made 15-cents more. Some friend.
If you agree to a price, then you made a good deal
and you'd be wise to ignore all the monday morning
quarterbacks and back-shooters.

EVERYONE knows what their stuff is worth to them....EVERYONE.
If you can't make a starting point for negotiation from that,
then don't expect the buyer to read your blasted mind.
I'm tired of making an honest effort to open negotiations
and having to "guess" what someone else wants, only to have
them act insulted. It stinks and I won't play that game again.

Alright...end of rant!
(puff! puff!)

1042. FS Two Collins 75S-3Cs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-05 00:00:00 UTC
From: JB <jb@mail.org>
Message-ID: <33E71A15.C4EF13EE@mail.org>
Source record: 117445
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have two exc condition Collins 75S-3Cs. Both are collector quality, one is a RE and the other a WE. No dents, scratches or blemishes, and both have recently been professionally checked and aligned. My current situation does not allow me to keep all this Collins gear, so I'm offering these beautiful S-Line receivers for sale. I will entertain offers on either one or both. Because of condition, I feel the fair price to be approximately $1,750 for the WE (it has three filters) and $1,950 for the RE (two filters) plus packing & shipping. I had listed these receivers several months ago, and then decided not to sell them due to the fact that I didn't think I could ever acquire better S-Line recvrs in the future. Now, I must sell them even though I would prefer to keep them. So, make me a sincere offer, and you may wind-up owning one of these extraordinary receivers. Joe, K4JJ

See, we have found common ground. I will keep putting my equipment up
for bids, and you will use the "delete" key. Of course, I will still
sell my equipment.

I pretty much agree. Most people have a good idea of what something is worth.

I usually just pass on the "make offer" posts myself. I can live with them if that is how the seller wants to deal. No problem. What I would really like to see as a part of the posting is where the equipment is! I would be more interested in certain pieces of gear, especially BA's if I knew how far they had to be shipped or if they were really close by. A signature file is really easy to create and use. I don't understand why more of us supposedly "communicators" don't do a better job of getting the info out there.

> hour plus benefits.
So you don't want to work that hard, but you seem to resent the pay he
recieves??? Why not support him???

> For the Teamsters Union to try and justify a strike for MORE is like
> calling a rape a "social problem." The Teamsters action is an
> outrage!
> I suppose you think working for years, part time with NO benefits, only a few hours a
week guaranteed for you to base your household budget
on etc. is acceptable??? Personally I'd call THAT the real outrage!

> I am fighting back and ask you to help. Here's how:

Refuse anything delivered by SCABS! Call UPS and tell them you will
refuse to accept anything they try to deliver, during this situation
that the MANAGEMENT has forced upon the people that made it possible for
UPS to be the number one parcel service in the country! And call any
buisenesses that you do business with and tell them you'll refuse
anything they ship during this time, and do your buisiness with someone
else in the future whenever you can.

For what it's worth, that's MY opinion!

I don't see a thing wrong with an auction, held as
an auction. A serious auction includes a base price,
or starting point for bids. Christie's, E-bay, even
Joe-Bob Bumble at the county cow barn set a base price.

As far as "It's mine and I can sell it any way I want!
Na Na Bo Bo!" goes, hey-- won't get any arguement from me.
That's so obvious it's almost inane.
You can dance naked on the street corner to sell it
if that tickles your tookus.
Just don't expect me or many other people to buy.

I'm not talking about any one person. I'm not talking about
any one transaction. Most people (including me) have done
this with good intentions. I'm just trying to make people
conscience of how inconsiderate and unfair it is.
Here's the kind of exchange that's typical and really
chaps my cheeks:

Seller: I've got this Wiz-Bo-Doodly 1000X. It's got some
drill holes and needs cosmetics. I've used it
for years and it works great but I'd sell it to a
good home. Make me an offer.

Buyer: (sigh...) OK, hang on....

(Buyer finds all the information he can. Finds two transactions
by others in the past. One "Good, complete,some hacking,
needs work" $50. One is "Excellent, plug-n-play" $100)

Buyer: I've only been able to find a couple of past transactions
on which to base an idea. According to them, I should offer
$50. Let's talk about it.

Seller: Oh, I think I'll just hang onto it. Thanks. *CLICK*

Buyer: ARRRRRRRG! (Writes bellowing rant on BA).

Been there, done that, over and over my friend.
When it happens to *you* a dozen times, you might get the picture.

I agree 100%. The "call for great price" listings, though, usually have no choice. The manufacturers of the gear prohibit dealers from advertising other than the mfr's suggested list price; if you are going to discount it, you have to do so individually. They don't want price wars to get started. But, as to used gear, I'm with you...if I don't see a price, I'm likely to assume he's embarrassed to price it and it'll be way more than I'll want to pay and so don't even call/email.

1. Does anyone recall what Navy Transmitter model (maybe TCK TD_ ? or something like that) that used a pair of 803 tubes in the finals. It was a WW II vintage 1.5-18 Mhz transmitter loaded with roller inductors etc.

2. For the 4CX300A, does anyone know where I can buy (without a fortune) a pair of SK-760 (or equiv) sockets.

For sale:
O-212/FRT Oscillator, Radio Frequency (with 100 kHz standard freq)
MD-200/FRT Modulator, Radio (complete with some 30 tubes)

These are part of the AN/FRT-17 and AN/FRT-18 transmitters.
I purchased the transmitter some years ago and used parts from the power amplifier. I do not know if the Oscillator or Modulator work but, if you are interested, let me know by email. I'll see if I can test them (which may be a task in itself) and will let you know about physical condition. If there is no reply, I will pull tubes and major parts and junk them.

I'm sorry about that,
but I'm totally at the
mercy of all of you
who know much more
about these things
than I. Not being a
Ham, I wouldn't be
interested in a swap,
and really have no
idea what to ask in
the way of price.

A local Ham friend
heard that I had these
items and that I had
planned to just keep
storing them
indefinitely. He was
horrified! According
to what he has told
me, and from lurking
on these newsgroups
for a couple of days,
I've learned that
some of you guys do
indeed look for such
items. As far as price
goes, any figure I
throw out would be
simply a guess. I'm
getting the idea that
something over $100
but less than $600
covers most such

items. I just have no idea, and that's why I'm at your mercy. If someone wants them, and can use them, and if they are worth something as "a collector item" then I would feel really bad about just hanging onto them "forever". If one of you guys (or gals) wants to take the time to point me toward a source of more specific information that would be great! Barring that, I just have to let ya'll know that we have them and that they are available, and see what happens.

Here's more on their condition:

The Hallicrafter works. There are no dings or dents. The cabinet is somewhat dusty but is free of scratches . It looks as if a clear plastic pointer of some sort has broken off the large left side dial. The large central knob operates both the left side dial and the bandspread dial. The internal light behind the bandspread dial works. All knobs appear to be original. All the smaller knobs and toggle switches appear to work - at least they have an

effect when they are cycled. I have only a 5 foot wire for an antenna, and using that all frequency ranges other than standard broadcast seem quite weak.

I don't know if the Heathkit works or not since it appears to require a separate power supply which I do not have. Cosmetically it looks pretty nice, the front is like new but there are scratches on the top and sides, probably from being mounted as a mobile rig, and all knobs appear to be original and to function properly.

I have no manuals or schematics for either radio.

These radios are in Casper, Wyoming. I've not had much experience in selling stuff this way, but here's a proposal: If someone wants either or both I will carefully pack and ship them C.O.D. and will hold your check for 10 days from receipt pending your approval of the item. If they aren't what you had in mind just return them undamaged and I'll return your check.

-
Now,..... for ONLY
those who are
offended by my "make
offer" post:

Hallicrafter S20R
$650.00 cash
(firm)
Heathkit MR-1
$550 cash (firm)

unless, of course, someone has no way of knowing what
it really is worth.

By the same token, Something that is worth 20 bucks if you
walk up and plunk it down is not worth packing to ship,
especially if that takes time from the yard work your XYL
wants, and doesn't justify it in her eyes.

Not for $20.

Make offer often gets ludicrously low offers from people that
get offended if you don't take it.

How bout make offer over $XX?

<snip>

I'm in complete agreement here, also. The few occasions I have something to sell, I post a price also, and I tend (and try) to run low because I'm in boatanchors for the love of 'em and nothing else. I'm actually pretty much out of buying because prices have gotten so inflated over the last few years that most radios are slipping out of the reach of ordinary folks (if I woke up tomorrow and had a warehouse full of good-quality R-390As, you can bet they'd still be priced no higher than $150, not the $500 and up I've seen lately)..

I like a posted price because it gives seller and buyer a base from which to proceed. I don't like having to try and guess a price, hoping I won't go too low and get rewarded with a "click" or no answer to my e-mail, or as one guy did, a sarcastic laugh on the phone.

Bottom line, IMHO, is a fair price arrived at by understanding what the box is really worth, not what "somebody else says" or what some "buyer's guide" says, and so forth. Incidentally, that last statement is a lot of the reason why I don't buy tubes at meets anymore from people holding the latest Antique Radio catalog.

73,

Joe KC6TXU

1074. OHIO FOLKS-Do You Have A Tube Tester You Wish To SWAP?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-07 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <5sdm6v$s5j@csu-b.csuohio.edu>
Source record: 117377

SWAP HIGH END NEC LASER PRINTER FOR HICKOK TUBE TESTER,
for example, 752, 752A, 539C, TV-7D, TV-10, B&K 747,
TRIPLETT OR OTHER DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER,
ETC.

NEC Postscript Silentwriter LC 890 Model, 8 PPM, 2 MB Ram,
300 DPI, backlit two character lines LCD option menu
screen, external print density control, dual letter &
legal sized paper trays, dual printer ports (PC or Mac
compatible)--same as the HP Postscript high end office
model that's about $1200 right now and the only difference
is the HP is 600 DPI. I can't tell the difference between
300 & 600 DPI. NEC NEEDS MINOR REPAIR.

IF YOU HAVE A HICKOK OR SIMILAR UNIT THAT YOU WOULD LIKE
TO SWAP, LETS COMMUNICATE. Incidentally, to add the
Postscript option with all those nice Adobe fonts to a
basic laser printer usually adds $200-$400 to the base
price of the printer (licensed Adobe fonts and extra
memory required--these Adobe fonts are not in the Windows
True Type fonts, but show up only when you have this
Postscript printer listed with the ability to print them).
Hopefully, you'll be in the Ohio (northeast area) so you
can inspect it in person to avoid shipping costs for both
of us. It's heavy and not a cheap light duty type
printer.

You can email me directly at:
l.mclaughlin@popmail.csuohio.edu

Thank you

For Sale:

RME VHF-152A VHF Converter

This collectable allows you to receive 11, 10, 6, and 2
meters on your hf rig. It converts signals on these
bands to 7 mhz, and just plugs into the antenna connector
of your hf receiver.

Requires 110 volts AC.

Dimensions: 12"L x 11"W x 11"D

Weight: 19.5 pounds (plus packaging)

Tube Complement:

6AK5 RF amp
6J6 Mixer Osc.
VR150 Voltage Regulator
5Y3G Rectifier

Includes original operating and service manual.

Cosmetically in very good condition, minor scuff mark
here and there on the enclosure. Front panel excellent
except the numeral "1" in "144" on the bandswitch has worn
off. Electrically untested, but not a complex circuit if
it needs alignment.

$85 plus shipping as-is
$125 plus shipping fully tech'd.

FOR SALE
CB equipment:
Browning Golden Eagle Mark III three pieces sold as a set $600.00 + shipping. Overall appearance is very good to excellent & it was working when removed from service. There are no books or microphone with it. Each piece has a metal case w/ faux wood grain covering. Front panel & markings on all three units are excellent. The only observed problems with these units are as follows: Receiver has a few light rust spots on the transformers & chs. Transmitter has few light rust spots on the transformer. SSB15 Transmitter has 1 spot of chs rust & there is a good deal of flaking of the faux wood grain case covering on top.

HAM gear.
TMC FFR3 military receiver w/ 8-16mcs tuning drawer. Overall appearance very good. Rack mount. Top cover & power cord missing. Not tested. $150.00 +shipping

National receiver NC300. Overall appearance very good, some paint scratches. Not working, hum only. $200.00 + shipping.

Audio equip
Dyna Mark III mono power amp 1 available priced at $250.00 +shipping (or $190.00 w/o tubes) Overall appearance is very good to excellent, works very good. Has 2 brand new RCA US made 6550's.

Heathkit W5M mono power amp, 1 available priced at $195.00 + shipping. Overall appearance is very good. A little rust on cage, Chs is dirty but no appparent rust & markings are all very good. Some rust on the choke. Has 2 Genelex KT66's, works VG. Missing fuse & cap.

Rogers stereo integrated amp HG88 priced at $200.00 +shipping. Overall appearance is very good but brass front panel has many small spots on it. They will probably polish out ok. Made in London. ECL 86 outputs.. Works very good.

TUBES-All military boxed.
GL 8020 GE $40.00 +. 3 available
6U7G RCA $2.00 +. 15 available
12J5GT SYL VT135 $2.50 ea + 11 available.
717A Western Electric $20.00 ea. 4 available.
+shipping

Prices are fob Baltimore , Md. Offers will be considered on any of the above items.

The Electron Tubes Online shopping (ETOLS) is open !!!
July 29th, 1997
http://www.halfin.com/shop

To celebrate the 50th anniversary of the company, Halfin S.A. has opened ETOLS.
The shop contains more then 400 types and each week, new items will be added. The Etols team is working to provide you with online information about each tubes presented in the shop using pictures and/or datasheets.

ETOLS is the first Electron Tubes Online Shopping facility on the Internet offering direct buying with Visa and/or MasterCard.
http://www.halfin.com/shop/index.htm

ETOLS is not just a shop. We would like that this site to become a real center of reference for tube lovers. This project can only develop with your participation. The members area provides many links to interesting Web sites containing Data Sheets, technical informations, useful software, fonts, symbols and advise to everyone from beginners to experienced users.

We can also give you the opportunity to publish your technical or artistic projects, schematics or simply opinions related to the tube usage. Any suggestion to improve the members area are welcome!

The members subscribtion is totaly FREE and any tubes lover opinion will be appreciated.

Hello,

I have for sale a very nice and rare Hallicrafters signal generator model HG-1 with original manual. Range is from 50kc-880mc. Electrically, it works very well and is in excellent physical condition with no dents or scratches. I've used this unit many times for receiver alignment. Very nice. $40 plus shipping. Email or 248-332-5429 between 6pm and 10pm EST.

73,

Peter N8EVJ

I like reading another viewpoint.
PATCO - that was where the controllers believed working
double shifts put airlines in danger, wasn't it? I do not
recall salary being a factor in that strike.
UPS - that is where the Union wants people doing nothing
during the non-rush 4 hours of an 8 hour shift? Or are they
advocating firing half of the part time staff?
Just how expired has the contract become? There are a lot
of people/companies hurting real bad.

Compare the first post with the second, then try, just TRY to use the second
post to satisfy the first post. Back in the early '50s, among other exotica in
the Air Force, I studied semantic propaganda.

Part of the test was to write a CYA sort of paragraph that sounded good and
didn't say a word of real meaning.

The result looked like the second post.

$250 seems incredibly high. I paid $80 for a pristine S-40B at the Timonium Hamfest (Baltimore, MD). Maybe the "A" model is rare or something?? I've got the "B" model book and could zxerox it if would suffice. 73 Jeep K3HVG

Well, John, since you're going to resort to language like
"timid" and "lazy," I feel free to do likewise.
I personally can't stand people who pop-off without
R-E-A-D-I-N-G what was said. *That* is a lazy reader
and a careless talker. The thread makes it very clear
that the problem is the sellers unwillingness to enter
into negotiations in good faith. It also makes it clear
that the buyer has taken the time to find any available
information on which to base a price. The buyer then offers
the researched price and clearly asks to enter into
negotiation, whereupon the seller "takes his toy and goes home"
without so much as a counter-offer. It's childish, rude and
unfair to so waste the buyer's time and effort.

I have noticed that union officials and even rank and file seem to like to get racous and then object if anyone else does so. I am reminded of the PATCO strike where the PATCO prexy said the whole country was hostage to the union, and Pres.Reagan said no, we aint, neither.

I worked in a machine shop, and a HELPER, who had a highschool education and no time in machines went to work there, and he had been making more than journeyman machinists, and griped because after "that bastard" in the white house had ruined his life, he had had to sell ONE OF HIS BMW MOTORCYCLES, AND MIGHT HAVE TO SELL THE OTHER ONE !

I was driving a 10-year-old car, and couldn't sympathize too much.

When I said so, and others agreed, my machine started showing up with loose mounting bolts.

I lost my job for "carelessness."

At the time, I thought it was someone else. Later, I met a man from there who said he had seen the other guy do it to my job, and wished he had said something, but couldn't take a chance. He had a family to feed, too.

Just ship Fedex or Post Ofc for a while.

Ciao.

The numbers refer to dilution factors. 5 is 5% goop, 95% solvent/cleaner.
100 is 100% goop.
I'm not disparaging it by calling it goop. I restore old analog electronic
music gear,
and I swear by Cramolin/DeOxit/call-it-whatever. Some high-end audio
people tell
me that they buy 100 and dilute it with Freon TF (which may not be
available anymore).

Pardon the break...the speaker itself is 6" x 9" set in at
a diagonal. The cabinet itself is about 9-1/4" x 9-1/4"
across the front where there's a trim ring. Behind the trim
ring the cabinet measures just a tad more that 8-3/4" x 8-3/4".
There are roundish feet stamped in the bottom. Goes well with
the HQ-100 and HQ-170...makes it so the rig looks complete.
Usual going price is $50 to $75 depending on appearance.

1110. WTB HQ-110 clock knob

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-08 00:00:00 UTC
From: k9two@sprintmail.com
Message-ID: <871098731.26868@dejanews.com>
Source record: 117404
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I am looking for a clock knob for the HQ-110.
If you should have a spare, I would like to
buy it. I have other spare parts from an HQ-110
should you need anything.

Thanks

73 Don K9TWO

Right ON!!!!!

My attitude is 'help a fellow ham'. Make it fair for the
both of you.. I want to walk away feeling like we both
got a fair shake..

In Fact, this guy wanted my PRO-2006 scanner so bad, I traded
it straight for an old HW-8, p-supply, spkr, qrp tuner and watt-
meter. That's it!

He and I both are happy. I know I could have bought 3 hw-8's.
But who cares. Some greedy SOB would have the scanner and
just sell it for more....

To those who trade for a business:
Can you help a fellow ham? I don't like car sales-folk.

1113. FS or Trade: SGC SG-2000 Commerical Grade HF Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-08 00:00:00 UTC
From: sandy@sandy.com
Message-ID: <5sft9s$dg2@surf.com>
Source record: 117407

For Sale or Trade for Collins Equipment:

SGC SG-2000 Commerical Grade HF Transceiver A rugged HF transceiver with 150W PEP output. Modes: USB, LSB, CW, true AM in receive mode and Data.

In Excellent condition (Looks new) with all manuals, microphone, and remote-head kit already installed. (20' cable and swivel mount bracket...great for mobile use in car, truck, boat, airplane, or even a bicycle!

Asking $1050.00 plus shipping or would consider trade for/towards Collins 75S3/3B/4 receiver in CCA excellent condition - Round Emblem.

Send email or call me at 408-257-5383.

Okay...here's the poop:

This is a beautiful modern digital radio capable of transmitting on ANY frequency from 1.8-30MHz. Can also be used on Marine and Aviation frequencies and is built like a tank. See it at SGC's web site at:

http:/www.sgcworld.com/

Comes programmed with 644 ITU channels and 100 user defined channels that can be set to Ham frequencies in the 1.8 - 30 MHz range; receives 500kHz-30MHz. All push-button controls!

Keypad control with 21 illuminated keys. Scans ITU channels and 100 memories with adjustable scan speeds and rates. LARGE, LCD, wide-angle display, adjustable back lighting for easy viewing night or day. Operates with the front panel removed to function as a remote control head (20 foot cable included) or can be used as a single unit. Will accept up to 8 remote control heads. Built-in computer control capability, can be controlled by any standard RS-232 protocol on all Digital modes.

12VDC @ 16A - 4 3/4"h x 10"w x 15"d - 12 lbs.

See the SGC web site for more info and available accessories.

Thanks for the reading.

Gee, I didn't think my command of the English language was *that* bad. I just write as I was taught to: say what you mean and mean what you say. I do tend to ramble a bit, but implicit in what I write is an old statement of Ayn Rand's: "And I mean it!".

Source record: 117277

I have for sale a collins R-648/ARR-41 receiver. It covers 190-550 kc and 2-25 mc.
The receiver looks like a small R-390, the size of a BC-348.It works fine it has two collins mechanical filters 1.4 and 6.0 kc.
The radio orig. was powered by 28vdc but someone bult an external 120vac power supply. The external power supply is connected using the orig. dc connector on the radio. No new holes added. The radio still has the orig dynamotor inside, it is just disconnected. The radio can be made orig. by just reconnecting the dynamotor and removing an extra wire to dc connector.
I am asking $190.00 for the radio or trade for navy direction finder or receiver.

Hello,
Forsale a very nice "Bell" Stereo Hi Fi Amplifier.
(4 each) 6V6GT glass RCA tubes in push pull. (2 each 6V6 per channel)

Here what it's got:

Inputs: Tape Head
Phono 1 & 2 magnetic
Tuner
Aux MX
Tape

Switches: Stereo / Mono
Normal / Reverse
Loudness / on /off
Lo Filter
Hi Filter

Seprate Bass and Trebile Controls for each channel.

Removed recently from an Organ. This amp is really nice.
Tubes are all new, including New RCA 6V6GT Glass output tubes.
The front panel on this amp is near mint! It was located inside
the Organ, so it was protected.

I also have the Hammond "reverb unit" !
About 1 foot long with "springs"

I will take $95 + shipping
Shipping from Cleveland Ohio zip 44125

or you can call 216-883-3879 for more info.

OK. This is still sitting here. Let's hear from somebody.

Hammarlund HQ110A Amateur Band Receiver

Tube-type AM-CW-SSB receiver for 1.8 MHz - 54 MHz bands. In
excellent condition, looks nice. Everything works well, but it
might benefit from a few tweaks and adjustments. No manual.

$100 + shipping

I am posting this for a friend who does not have email. If interested email me and I will forward to him.

Looking to sell or trade:

1) URC-773 w/accessories (handset, battery box, antenna), 30-76 MHz in 25kHz steps, has retrans, carrier and 150Hz tone squelch. Runs on D cell batteries

2) R-1617A/USQ-46 surveillance receiver with one seismic sensor (works). Operates in VHF high band
and has display for monitoring sensors. Operates on 12 v.

Looking to obtain a Yaesu FT-70G HF transceiver.

Contact sparkes@fast.net if interested in these items or have a FT-70G for sale

Thanks,

Ned Parkes - N3LKT

Attention Arizona Hams!

AzHam is a mailing list (reflector) open to all radio amateurs residing in Arizona (or just interested) for the purpose of enhancing communication throughout the state.

AzHam is NOT allied with any club or organization, but is open to members of any/all such clubs (not required).

News (like Arizona Science Center updates or other) of local interest is welcome:

* Hamfests
* Upcoming Meetings
* Gossip
* Elmering
* Coordination
* Emergencies, assistance
* Hams, Experimenters
* Newbies, Wannabees

We will tolerate some amount of sell/swap, but that is not the intention.

The mailing list is provided by Al Waller K3TKJ at no cost and I (K7ON) do the administrivia (grunt work, and ever so humbly I might add).

To join, send email as follows:

TO: azham@qth.net
SUBJECT:
BODY: subscribe

Please direct any questions to: k7on@qsl.net or k7on@qth.net

Please spread the word to as many folks as you can!

73, Brian

1158. WTB: Power Supply for SP-400X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-10 00:00:00 UTC
From: davidb@scn.org
Message-ID: <EEoALD.FrA@scn.org>
Source record: 117311

Just got a Hammarlund SP-400X at a swap meet today. That thing must have set some sort of a record for the number of tubes in a single-conversion communications receiver -- I count 16 on the main chassis! Bet the audio will sound great, what with the three 6F6's it has.

Came without a power supply, so before I make plans to build my own, I thought I'd check and see if someone has an extra they'd be willing to part with. Even a junker PSU would be OK if it had a good transformer and chassis.

--

For Sale or Trade for Collins Equipment:

SGC SG-2000 Commerical Grade HF Transceiver
A rugged HF transceiver with 150W PEP output.
Modes: USB, LSB, CW, true AM in receive mode
and Data.

In Excellent condition (Looks new) with all manuals,
microphone, and remote-head kit already installed.
(20' cable and swivel mount bracket...great for mobile
use in car, truck, boat, airplane, or even a bicycle!

Asking $1050.00 plus shipping or would consider trade
for/towards Collins 75S3/3B/4 receiver in CCA
excellent condition - Prefer round emblem.

Send email or call me at 408-257-5383.

Okay...here's the poop:

This is a beautiful modern digital radio capable of
transmitting on ANY frequency from 1.8-30MHz. Can
also be used on Marine and Aviation frequencies and
is built like a tank. See it at SGC's web site at:

http:/www.sgcworld.com/

Comes programmed with 644 ITU channels and 100
user defined channels that can be set to Ham
frequencies in the 1.8 - 30 MHz range; receives
500kHz-30MHz. All push-button controls!

Keypad control with 21 illuminated keys. Scans ITU
channels and 100 memories with adjustable scan speeds
and rates. LARGE, LCD, wide-angle display, adjustable
back lighting for easy viewing night or day. Operates
with the front panel removed to function as a remote
control head (20 foot cable included) or can be used
as a single unit. Will accept up to 8 remote control
heads. Built-in computer control capability, can be
controlled by any standard RS-232 protocol on all
Digital modes.

12VDC @ 16A - 4 3/4"h x 10"w x 15"d - 12 lbs.

See the SGC web site for more info and available
accessories.

Thanks for the reading.

1164. For sale: New rack cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-10 00:00:00 UTC
From: toneri@ils.net
Message-ID: <33ee48ce.506133@NR1.toronto.istar.net>
Source record: 117317

I have for sale a new rack cabinet. This takes the standard 19" wide panels. The cabinet is approximately 48" high x 24" deep x 24" wide. The racks are fully adjustable and the cabinet has a locking rear door. All the hardware is includedand I can deliver it within about 50 miles of Toronto, Ontario. It is too big and heavy to ship economically. This is and ideal cabinet for those rack mounted boatanchors that you don't have a rack for. New cost for this cabinet is over $700. Asking $150 or best offer.

1167. Taking bids on rare Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-11 00:00:00 UTC
From: rog42@aol.com
Message-ID: <19970811010701.VAA08129@ladder01.news.aol.com>
Source record: 117320

Clear Case 1952 Hallicrafters Radio:

This rare and unusual radio is pictured on the cover and on page 170 of Chuck Dachis&#65533; book &#65533;Radios by Hallicrafters&#65533;. The clear case was used to show customers the new printed circuit board being used in the ATCL series of radios. Chuck Dachis assigned the model number CPCR-1 since it was not a production model. This particular radio came from a dealer in Portland, Oregon and the original pamphlet is still with the set. It is in extremely fine physical and working condition. Send your purchase bid to: Rog42@aol.com.

Hey guys, time to stop bitching and start doing something productive. The UPS strike looks like it may last a long time. Neither side is willing to give an inch so plan on a long drawn out mess. If they start hiring scabs, it may develop into an all out war with big brown trucks going up in flames!! I suggest calling around and seeing what other shippers have to offer. Some of these include:

RPS
DHL
Greyhound freight
FedEx (great 2-Day service, but pricey)
Post Office - yes, that's right. THey will ship packages priority or Express Mail up to a certain weight limit. Actually, I've heard they're overjoyed at having the new business - more overtime, more money, etc.

I'm sure there are probably a bunch of other shippers out there who would be very interested in getting the UPS business. So time to stop all the whining, complaining about labor unions, strikes, etc. and call someone else. You may be surprised how friendly they will be to get your business.

73,
Bob, K3AC

I'm sure there are others out there

1169. Re: How much is a Hallicrafters S40 worth?

Newsgroup: rec.radio.amateur.boatanchors

I bought a wonderful S-40B for $35 plus shipping about six
months ago. Hard to imagine paying more than $50 for one, but
maybe I'm just cheap.

W7FG Vintage Manuals sells the manual for $15:

1172. Re: Theory of gassy detector tube?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-11 00:00:00 UTC
From: "John M. Franke" <j.m.franke@larc.nasa.gov>
Message-ID: <33EF8BA3.3BB0@larc.nasa.gov>
Source record: 117325
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Gassy tubes have a sharper plate current versus grid voltage curve which produces greater detecting efficiency. However, it functioned best at low plate voltages (<30V) and was neither stable nor consistant from tube to tube. The get the best results, both the filament current and plate supply had to be "manipulated." The steeper curve resulted from electrons ionizing the gas.
Hope this helps,
John

For sale or trade: a nice old Yaesu rig!

Yaesu FTdx-570 HF transceiver, early 1970s all-tube rig,
covers 80/40/20/15/10m, SSB and CW, receives WWV on 15 MHz,
manual says 550 Watts PEP input on SSB, a real powerhouse!
VERY clean condition, no modifications that I can spot, no
bad repairs, etc. I got the rig as part of an estate, and
I have no need for it. I have checked it out on CW and it
works fine, but I haven't checked it on SSB (no mic handy).
I see no reason why it wouldn't work, however. Everything
seems to be in working order. VFO is in good calibration.
The receiver will surprise you (it did me!). Has a narrow
CW filter installed too. I did not test any of the tubes
(performance didn't show me a need to check them).

Oh, one thing, the cooling fan is a bit noisy. I took it
apart and lubed it, but it's still noisier than I'd like.
You could easily replace it with a 3-1/2" computer fan.

A copy of the operator's manual is included (cost me $20!).

Does not include a microphone (they aren't hard to find).
Should work well with most Astatic, Turner, Shure, or E-V
non-amplified desk mics (or most older Yaesu desk mics).

This would be a good starter rig for the newcomer to get
his/her feet wet on HF without putting out a lot of money.
Take this rig, plug it into a 110 VAC outlet, add a key,
a mic, and a suitable antenna, and you're on the air!

Asking $350 plus shipping charges (45 pounds from 75065).
I am open to cash offers.

I'd be interested in trading the FTdx-570 for a clean and
working Drake 2-C / 2-CQ / 2-NT station (does not have to
be "museum quality", just decent looking, and working).

Interested? Email me! I have the rig all packed up and
ready to ship (a previous sale fell through).

73 from Dean, K5DH

I don't agree with Travis...I have found just the opposite. I get far
more responses when I asked for bids...and some real surprises.
Sometimes in my favor, somes not, but always interesting.

Jim

Ok, let me see if I've got this right. This hypothetical item is so rare and unusual that if you ask for advice, no one can help you, but if you say "make offer" you'll have a bunch of offers to pick from and can get a fair idea of its value from that?

Me, I don't have any problem with people posting "make offer" ads; I'm just not likely to respond unless it's something I want pretty badly. I price my stuff; I prefer other people to do the same. If you post something that I think is worth $100 to me and you ask $100 for it, I'll just take it. If you ask $150 for it, I'm apt to contact you and see if there's some reason why it's more than I was expecting...superb condition, options, extras like manuals or something like that, and also may try to buy it for what I want to pay... of course, you're under no obligation to sell it to me if we can't agree on what it's worth. If you post it at, say, $200 or $300, I'll likely not even respond, assuming we're too far apart to attempt it.

But if your post says "make offer", I tend to assume you want way too much for it and are fishing for a sucker. No hard feelings; I'm not mad about it...I just don't bother you, on the assumption that we wouldn't be able to deal anyway. I've made a couple of exceptions to this, so it's not that it's a rule with me; just an observation.

It seems simple to me: post "best offer" ads if you want to; I think if you try it both ways, you'll find you get much better results with the price posted in the ad. Make it what you think is a slightly high price and let the market decide. But give the buyer a place to start.

I've advertised a lot of stuff in my day, and occasionally forgot to put a price in the ad. I found I got better results when I went back and put a price in the ad.

Just my .02cents worth...

Travis N5AY

I'm aware that the '00A tube is intentionally gassy and is intended for detector service. What I've never understood is why a slightly gassy tube makes a better detector than a hard tube. Can someone explain or point me to an explanation.

It's special to me because it was my first shortwave radio. Other than
that, it's a rather pedestrian set; for example, the tube lineup is 6SA7,
6SG7, 6SK7, 6H6, 6SQ7, 6J5, 6F6, 6SK7, 80. Except for the 80 (a 1930s era
tube that seems to have been used as a rectifier as late as 1950) it's a
pretty standard lineup. BTW, does anybody know how to test this 4 pin 80?
Most tube testers don't have 4 pin sockets.

Folks,
OK, I'll give one more try to explain my position more carefully. This time I won't resort to the kind of emotional language which has characterized this thread since Mr Stinson first posted his diatribe against "make an offer" postings.

Suppose I have a nice old piece of ham gear that I wish to sell. Trouble is, that not many of them are ever offered for sale and I don't know much about the market so I don't know what to ask for it. I'm not very experienced so I don't know what it's worth. What do I do? If I ask for some help from the list I usually get no answer because no one else knows what it's worth either. I have stuff that I have never seen offered for sale anywhere, and I'm sure you do too, so what is it worth? Even if I don't want to just get the very last dollar, I don't want to get suckered, nor do I want to cheat somebody, I just want to get fair price. What will you have me do?

Suppose I am getting kind of tired of getting beaten to the punch on every nice sale item that comes up by folks who keep their finger on the enter key lurking for good deals, and they are there, too, don't try to kid me that they are not. What do I do if I have something to sell and I want to make it fair to the whole group, not just a few. What will you have me do?

The only answer to both questions, it seems to me, is to offer the item on "make me an offer" terms, wait a few days for offers to come in, then choose the the one I like the best. I should find out pretty soon just what my item is worth, and how many folks are interested in it. I don't expect people to offer more than what they think it's worth, either, and I don't expect to get more than it's worth.

I think it is just as incumbant on the buyer as the seller to decide what something is worth. You seem to expect the buyer to do all the work. That's OK in the retail marketplace, but does not always work out well secondhand. I would not like to see anyone discouraged from posting "make an offer" for sale ads. I do, however, applaud your efforts to discourage folks from answering them. Lowers the competition for guys like me who are not reluctant to work for a deal.

Only problem with asking for bids is that you might have to share the bids with the other folks bidding.

1200. Re: Power Supply for SP-400X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-12 00:00:00 UTC
From: Marc Hildebrant <hildebrantfamily@worldnet.att.net>
Message-ID: <01bca6d1$c29128c0$c3ca92cf@newmicronpc>
Source record: 117347

David,
I 'm sure you will like the SP400 X. I have two of them, one original and one with the audio section replaced with a Williamson circuit. The SP400 X uses a 6F6 as a driver , and the other two 6F6's as push-pull.
Get a circuit schematic and build the power supply. The 6.3 volt section needs a hefty source. By the way, the radio was operated battery power in an emergency.

Marc

1201. WTB 117xc for the swan 250

Hello all,

Clear the dust off the big boxes in the garage!

Does anyone have a swan 250 power supply.. it's the
117xc..

Also I need a high-impedence mike for the same..

While I'm at it anyone ave a good used pair of 6146's....

Thanks...

General Coverage Communications Receiver
30 MHz - 1.5 MHz
Made in the early 1960's
15 tubes
Very Nice working condition and cosmetically very presentable
All its functions work properly
I have been through this receiver and verified its alignment
Its sensitivity is up to par
Comes with a service manual
Asking $475 + shipping of 50 lbs
Can be seen operating in the Boston MA area
Please e-mail me if interested
or call 617 873-3356 daytime and 617 729-1886 evenings and weekends.

Thank you

Bruce Murray

FOR SALE
CB equipment:
Browning Golden Eagle Mark III three pieces sold as a set $600.00 + shipping. Overall appearance is very good to excellent & it was working when removed from service. There are no books or microphone with it. Each piece has a metal case w/ faux wood grain covering. Front panel & markings on all three units are excellent. The only observed problems with these units are as follows: Receiver has a few light rust spots on the transformers & chs. Transmitter has few light rust spots on the transformer. SSB15 Transmitter has 1 spot of chs rust & there is a good deal of flaking of the faux wood grain case covering on top.

HAM gear.
TMC FFR3 military receiver w/ 8-16mcs tuning drawer. Overall appearance very good. Rack mount. Top cover & power cord missing. Not tested. $150.00 +shipping

National receiver NC300. Overall appearance very good, some paint scratches. Not working, hum only. $200.00 + shipping.

Audio equip
Dyna Mark III mono power amp 1 available priced at $250.00 +shipping (or $190.00 w/o tubes) Overall appearance is very good to excellent, works very good. Has 2 brand new RCA US made 6550's.

Heathkit W5M mono power amp, 1 available priced at $195.00 + shipping. Overall appearance is very good. A little rust on cage, Chs is dirty but no appparent rust & markings are all very good. Some rust on the choke. Has 2 Genelex KT66's, works VG. Missing fuse & cap.

Rogers stereo integrated amp HG88 priced at $200.00 +shipping. Overall appearance is very good but brass front panel has many small spots on it. They will probably polish out ok. Made in London. ECL 86 outputs.. Works very good.

TUBES-All military boxed.
GL 8020 GE $40.00 +. 3 available
6U7G RCA $2.00 +. 15 available
12J5GT SYL VT135 $2.50 ea + 11 available.
717A Western Electric $20.00 ea. 4 available.
+shipping

Prices are fob Baltimore , Md. Offers will be considered on any of the above items.

1219. Hammarlund SP-400 vs. SP-400-X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-13 00:00:00 UTC
From: davidb@scn.org
Message-ID: <EEtsrz.DrG@scn.org>
Source record: 117222

What is the difference between the two? Reason I ask is that I have an SP-400-X without a power supply and have managed to locate a supply for an SP-400 (it's in Texas, so I haven't been able to see or inspect it).

I'm hoping that the only difference between the -X and non-X models is that the -X has a crystal filter between the mixer and the first IF amplifier; the power supplies used for the two are identical. Is my guess correct or am I all wet?

I'm rather impatient to get it back into working order and into my bedroom for late-night and early-morning broadcast listening.

For what it is worth, I have seen a few postings where the bidder has said " best offer over X$". I find that this way of doing it this way is sort of the best of two worlds:
- it gives potential buyers at least an idea of what the seller is looking for as a minimum. In two cases when I saw this type of posting I was able to know immediately it was in my price range and gave it a shot. In another case I stayed away which means that nobody's time was wasted.
- it still lets the seller get closer to the market price if it is higher.

From: El Bandito <villafuego@earthlink.net>
Message-ID: <33F27786.19DE@earthlink.net>
Source record: 117231

Recently purchased an immaculate RME-45 receiver in Arizona. I'm not an expert by any means, but thought it was a really nice older unit. Has the matching speaker(almost as big as the unit itsself), and I got a full compliment of spare tubes and the original 9 page operators manual with parts list and schematics. It has crisp, clear sound- blows away my National NC-60. Any info would be greatly appreciated.
Thanks, Bob

Carl and group-

$10 to $100 is what I've seen.
I've one with a vernier added to bandspread that I'll sell for $65
plus shipping from 30306.
Needs filter caps.
$75 and I'll put them in.
Photo available.

I've seen the other two you are looking for for $15 (ratty) to $100
(very nice) at hamfests within the past year. Didn't buy but they
did sell later for unknown $.

Hello to all,
I have a near mint HT-30 transmitter for sale. It covers 80 to 6 meters, AM and CW. The unit is all original, no rust, no serious sratch marks. The front panel looks like the day it was taken home. The insides is very very clean, the components look like they are brand new. All the Hallicraters labels are on the back of the unit. Manual is a photocopy. Reason for sale, too many radios. I'm asking $ 100.00 firm. Please email me for detailed information.
Thank you
John Grow

1237. FS: Browning Golden Eagle & Heath W5M pwr amp

Source record: 117240

FOR SALE
CB equipment:
Browning Golden Eagle Mark III three pieces sold as a set $600.00 + shipping. Overall appearance is very good to excellent & it was working when removed from service. There are no books or microphone with it. Each piece has a metal case w/ faux wood grain covering. Front panel & markings on all three units are excellent. The only observed problems with these units are as follows: Receiver has a few light rust spots on the transformers & chs. Transmitter has few light rust spots on the transformer. SSB15 Transmitter has 1 spot of chs rust & there is a good deal of flaking of the faux wood grain case covering on top.

HAM gear.
TMC FFR3 military receiver w/ 8-16mcs tuning drawer. Overall appearance very good. Rack mount. Top cover & power cord missing. Not tested. $150.00 +shipping

National receiver NC300. Overall appearance very good, some paint scratches. Not working, hum only. $200.00 + shipping.

Audio equip
Dyna Mark III mono power amp 1 available priced at $250.00 +shipping (or $190.00 w/o tubes) Overall appearance is very good to excellent, works very good. Has 2 brand new RCA US made 6550's.

Heathkit W5M mono power amp, 1 available priced at $195.00 + shipping. Overall appearance is very good. A little rust on cage, Chs is dirty but no appparent rust & markings are all very good. Some rust on the choke. Has 2 Genelex KT66's, works VG. Missing fuse & cap.

Rogers stereo integrated amp HG88 priced at $200.00 +shipping. Overall appearance is very good but brass front panel has many small spots on it. They will probably polish out ok. Made in London. ECL 86 outputs.. Works very good.

TUBES-All military boxed.
GL 8020 GE $40.00 +. 3 available
6U7G RCA $2.00 +. 15 available
12J5GT SYL VT135 $2.50 ea + 11 available.
717A Western Electric $20.00 ea. 4 available.
+shipping

Prices are fob Baltimore , Md. Offers will be considered on any of the above items.

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
August 17th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

From: Jack <friday@ccnet.com>
Message-ID: <33F3E76B.FC11A67A@ccnet.com>
Source record: 117173

I'd like to swap a running and in good condition 1981 Mercedes 240D
(diesel) silverblue for:
Collins - KWS1, KW1
Crankup tower
Alpha full KW linear
or any other neat boatanchors you might want to offer.

The car is currently registered in California and I use it from time to
time (210K miles). I have 3 other vehicles and I think I can say
goodbye to this one. I've owned it since it was new.

Also, I have a Yamaha Riva 125 Motorscooter '86 (red) in showroom
condition with 2000 miles on the odometer. This is a great little
scooter, but my 2 wheeled heart is now with a Harley.
value on the scooter if you could find one this clean is about $1000.
This bike is also currently registered in California.
Any swap offers?
Jack

1253. Want: SB-200 or FL-2100b/z HF Amp.

Newsgroup: rec.radio.amateur.boatanchors

I'm looking for a Heathkit SB-200 or a Yaesu FL-2100b or z HF Amplifier
in repairable or good condition. My price range is about $300 for a
good working amp. I also need it shipped to Roseville California
(near Sacramento).

I see UPS is still on strike so...

US Mail Fourth class mail is $11.96 for 45 lbs. all the way across
the USA. Insurance is $3.40 for $300.00.
So shipping & insurance should be about $15.36 or less. The max weight
for US Mail fourth class is 70 lbs.

I can send you a postal money order.

Let me know what you have and how much you want.

mailto:rtwodtwo@cwnet.com

I have one of those boatanchors myself, and I'm very happy with it - so much so in fact that I would be willing to discuss a price for yours. Please be more specific about the damage to the coil and let me know what you would want for it C.O.D.

I think you have to understand that anyone with that model tuner with a good roller inductor has a good tuner, not a hangar queen, so you're not likely to find anyone with a replacement coil.

Please consider this in good faith.

Try Amidon Assc. or RF Parts. Both advertise in QST and/or CQ and 73 Magazine. You might try a web search - I'm pretty sure RF Parts has a web page. I'm curious about how old the schematic for the transmitter is? Most modern gear calls for torroidal inductors as opposed to slugs. Good luck,

I don't know, but what makes my Hammarlund a SP-600-JX is that it has
provisions for crystal control of the HF oscillator.

Well, if you are not interested in historical accuracy, when the 80 burns out, wrap it in a towel, smash it with a towel and dig out all the glass and innards. Then solder a couple of diodes (1N4004's or similar) and plug it back in.

>"Real radios glow in the dark!"

This should be an easy one to diagnose ..... The Apache runs a potted power transformer that had a tendancy to go south. Unsolder the secondary high voltage wires from the filter cap to isolate the transformer from the filter. Use your ohmmeter to check for shorted windings. On the filter caps, use the ohmmeter to check for shorted filters. As I recall each cap had bleeder resistors accross them. The meter should charge up to approximately the value of the bleeders. Otherwise the shorted filter cap will show up with very low resistance reading. I can't believe that you're no tech with that call sign :-)

>Hope this helps,
>John
>j.m.franke@larc.nasa.gov

I suspect that the plate characteristics of one of those 00As has kinks
and bends in it - these non-linearities make the tube a better detector,
if one can operate on top of them by doing the knob twiddling.

No doubt the kinks are a direct result of ionizing the gas - the gas atoms
have an absorption spectrum such that electrons of only a certain
energy can be absorbed. I recall the "Franck-Hertz" experiment, where
one can effectively map out the ionization potentials in a gas by measuring
the plateu levels in the plate current curve of a special vacuum tube (well,
not really a "vacuum" tube...).

Like to trade some Cetron 572Bs and one Eimac (used, fulloutput) 3-500z
for a 2kw tuner. SWR/power meter not important. Ant switch not important.

Quanity of 572Bs with the 3-500Z depends on what type of tuner you have.

let's trade.

No MFJ please.

Hello,

I recently acquired a homebrew speech processor that is based on a
circuit board that says: AN-TECH, E-CLIPS COMP.

IC's on the board ar an NE571, LF347 and LM1458.

I got the little bugger working, but wonder if anyone might have a
schematic or info on proper set-up. Hoping to use it with the old
Heathkit TX-1 Apache.

Thanks and '73...

I have a Collins 516F2 for sale. It is a RE unit and has solid state rectifiers installed. It also has what looks like a factory mod that allows the attached unit to switch only a relay coil for off-on purposes and not the full transformer primary. If you have a KWM2, you'll appreciate this one! KWM2 power switches aren't cheap. Asking $175 plus $25 for shipping or $175 with local pickup in Northern Ohio.

1287. Italian Ship's Radio Officer Seeks Contacts With U.S. Peers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-15 00:00:00 UTC
From: Jim Navary <chunga@arrowweb.com>
Message-ID: <01bca9cf$cd171e20$5451accf@jim>
Source record: 117190
Cross-posted to: misc.transport.marine,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

Hi all,

A couple of years ago I was active as an amateur radio operator and shortwave listener spending lots of time monitoring the maritime HF bands. As part of my hobby I would write to ships' Radio Officers that I had heard to request confirmation of my reception.

I have been inactive in the hobby for a few years. A few days ago, however, I received an unexpected telephone call from one of the Radio Officers that I had corresponded with. He is Italian and was on board the M/S Monte Oliveto off the coast of Italy.

He, as are most RO's, is very concerned about the impact of the GMDSS system on his career and the shipping industry in general. He wanted to know if I could arrange for him to get in contact with any U.S. Radio Officers to discuss issues surrounding the move to GMDSS. I told him that I have been inactive but that I would see if I could locate someone to put him in touch with.

He will be calling me again on August 20th to see if I have had any luck. So, the purpose of this posting is to try to locate any ships' Radio Officers who would be willing to talk to him.

If you can help, please contact me via email at either chunga@freedomnet.com or jtn@midatlantic.net and I will relay any information you can provide to him on August 20th.

Thanks,

Jim Navary

I haven't had much problems using any of the 6JS6C's in the Yeasu FT-101's. You do have to modify the neutralization circuitry to work with most of them. The existing neutralization capacity is insufficient. Actually, I believe the first Japanese tubes used in the FT-101's were Toshiba's. These NEC's may have a better match to the existing circuit and may avoid the modification, but that's about it.

Saw a posting about some Sonar equipment the other day and that reminded
me of the "good old days."

My first phone operation was with a Sonar XE-10 NBFM adaptor in 1947-48
before I graduated to Class A and AM phone on 20 and 75. The rest of
the rig was a James Millen exciter (6L6 - 807) into a four element Yagi
at 20 feet. Forty-meter rocks quadrupled to ten for output.

Worked both ten and *eleven* meters - plenty of dx in those days even
with low power and FM!

The units sold for $39.95 and gave many of us our first taste of phone
operation on ten/eleven - the only bands open to phone operation for us
Class B boys. They had a horrible hum on the output, but guess that was
distinctive enough to call attention!

I am not looking for one but curious if any are still around . . .

I've got a collection of 20+ transistor radios I'm looking to sell. MOst of them are in great shape, a couple are missing the backs, many are complete with a leather/plastic case

If anyone is interested please let me know...I would like to sell the collection complete but would consider breaking it up.

Pictures of the collection can be viewed at:
ftp://ftp.ultranet.com/pub/fpurcell/radios/

Thanks!
Fran Purcell

Working on an old Yahoo tube thing and it is missing the
little VFO jumper plug (7 pin min) and as a result local
VFO is dead as hammer (at least I presume the external VFO
plug should be jumpered. Hate to use shotgun to TRY routing
power, but if anyone has any data on this thing it would help.
This beast is a real horror show under the chassis, but not bad
looking outside. Just could not pass it up at the local swap meet
and, well what can I say...

Tnx es 73

Source record: 117131

I was re-reading a June 1938 issue of QST the other night and
realized that Hallicrafters took out several FULL page adds
to sell the Sky Rider dual-diversity receiver.

So of course, now I'm curious. Anybody out there seen one in
real life? Or, perhaps (gasp) own one?

Looked like it was designed to fill an operating table with
knobs and switches.

ObRelated: A few years back some ham came up with QKS. As in
QKS? How many knobs and switches on your rig? QKS 65/3 I have
65 knobs and switches, but only understand 3 of them.

I have for trade a Fisher KX-100 integrated amp. It works great(24 wpc),
and sounds really nice. It has a phono input, tape and aux.
The top cover is missing, and looks a little rough. With some attention,
it will clean up nice.
I have the original assembly manual, and schematic. It is unmodified.

I will trade for a beat up tube PA amp(working) or tubes or whatever. Or
if all else fails make me a $ offer(make it LOW) plus shipping.

I just picked up a couple of Heath Weather stations model IDW-4001. What
I did not get was the temp. sensors with them. I got every thing else
working but I don't know what the sensors are. Does anyone have the
specs. and or schematics for these units?
Thanks..
Jerry...

This is the large converter unit capable of converting Upper and Lower Sideband simultaneously, it can also re-insert carrier into AM signals, emulating synchronous detection. Looks sharp & functions well. Have manual copy.
$400, and would much prefer pickup in Central MA.

I have also used the Svetlana tubes and they seem to work great. I
think as probably the main last users of tubes that us HAM's need to
support the only tube manufacture left. This is a world economy now
and will not change, Buy US doesn't apply.

Hello:

Saturday was the annual Brantford, Ontario Hamfest. Although this is a smaller rural Hamfest....The goodies always seem to surface here. Last year I picked up a Harmon Kardon Citation II Amp in VG condition for $15.00...as well as some real nice Old Microphones and Tubes.

This year was a spectacular year for good finds as well. Shortly after entering the grounds I went into one of the inside buildings at the "Burford Fairgrounds". A ham from Parry Sound, Ontario had just set up 2 Tables full of Military gear..Transmitters, Power Supplies, Accessories, and what have you. I'm not a real Military Gear Nut...but I went over to check out the goods anyway.....Glad I did..'cause sitting there on the table was a nice selection of Military Keys including a New in Box Bathtub Key....and the "Gem of the Lot"...a "1938 McElroy Standard Model Mac-Key...Semi-Automatic BUG!!" He also had the little booklet put out by Tom French covering Mac keys. These two items were promptly scooped up by yours truly and are now permanent residents of my shack! After thanking the seller for bringing such a nice item to a hamfest...I continued to the next building where 2 gents were piling stuff onto tables. They informed me that this was an estate sale...and they had some nice items to sell. I looked down on the table...and shimmering in the light was an " E.F. Johnson/SPEEDX Chrome Plated Bug!" I thought I was seeing things...and was possibly having dilusions after finding the Mac key only moments before ....but sure enough...there it was. We struck a deal...and home goes the 2nd nice bug of the day.....these were purchased only 5 minutes apart..from different sellers.

So.....Now I need to know a little about these bugs.....being the "Newbie" to Key Collecting..There must be someone out there who knows more about them than I....Scarcity, Collectability, History, Market Value etc..... Please let me know if you are familiar with either of these keys.....any comments will be greatly appreciated.

In an attempt to learn more about these keys..I would like to pick up some literature/books etc that may help me figure out what these things are I'm finding up here in the Cold North! Are there any Must have collector books I should get? I already have the Vibroplex Collectors Guide...and the McElroy Guide by Tom French....what else is available?

Other items picked up today were.....

Heathkit AM-2 SWR Meter.
Heathkit VF-1 VFO

Set of 4 Millen/ US ARMY Signal Corps Coils..with Metal Box.
A Straight Key with an OVAL METAL BASE Black Krinkle Painted...no idea what this is?? Any Help??
An Assortment of Tubes including..KT66, EL34, RK39, 807's, British Tubes, and quite a few Sweep Tubes.

So...it was another great meet in Rural Ontario.....The rain held off til after the Flea Market was over....and it was not real crowded. With 2 Buildings..and a large outside Tailgate area...things were quite relaxed.

Had a "Coke and a Hamburger" For breakfast....."The breakfast of HAMPIONS"!! HIHI.

I look forward to hearing from anyone who may have some info on the 2 Bugs I found.....

73...ROB....VA3SW

1368. Record Collection For Sale : New Jersey : 3,000 + records

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-17 00:00:00 UTC
From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5t7310$pph@mtinsc02.worldnet.att.net>
Source record: 117147

Record Collection FS/Trade : New Jersey : 3,000 + records

I bought a radio estate containing some very nice Collins equipment. Also there are an estimated 3000 records, perhaps as many as 5000; all stored properly:

Most are 33's from the 50-70's.

Several hundred 78's from the 30-50's

About 300 early 45's from the 50's

The collection is intact and complete. There has been NO cherry picking, they're all there!

Unfortunately, there is no list (at least it hasn't been found so far, but they seem to be in alpha order).

This ham radio operator had a recording studio there. We think he may have made custom sound recordings on transcription discs and tape. These records were only used on his "professional" turntables.

You can see this station and the records stored on shelving at:

http://www.eht.com/oldradio/boatanchors/station.htm

Note: the Collins equipment is not for sale, just the records.

Conditions: Records are "as-is". I will take the first reasonable offer. Will consider trades of "early" or home brew (pre 1930) ham radios, books, QST's, accessories, etc. Records must be picked up in southern New Jersey (no shipping). Records are located in the cellar (up one flight of stairs, then 20 feet to the back door. You can load your truck directly from the back door landing, about 3' high.)

Please respond via email to: oldradio@worldnet.att.net

Thanks, John Dilks, K2TQN

Another testimonial--I use Svetlana 811A's as modulators in my Johnson Viking 500, where they take 1950 volts dc without flinching. Of course, they show color on long syllables and whatnot, but no shortage of positive peaks from those guys. BTW, I use them with a Peter Dahl modulation transformer, as the original went south years ago. Back then (1977 maybe?), the Dahl was $95. Haven't priced it lately--afraid to.

Take care.

WA0KDS <WA0KDS@mcipnet.com> writes:

>I prefer the 24 hour one that runs on batteries but can anyone really
>read them???

>RON

The newer batteroperated ones from Seth Thomas are easy to read.
1-12 in large black numbers and 13-24 in smaller red next to the
"traditional" 1-12.

I bought a pair of them. One LOCAL and one GMT. And since I don't
always pay attention too well, yes, I put nice lables underneath.

73 es GM from Jeff

PS, the 00-23 hour clocks are a pain to get used to, since most of
us don't really look at the number, but at the position of the hands
to tell time with.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Someone has borrowed my HT220 service manual and not returned it, and in the meantime I just got a couple more HT220s which are in need of alignment. If anyone has a spare manual, I'd appreciate it.

Also, of course, if anyone has any old crystals for HTs kicking around, I would appreciate it. I know everyone pulled those itinerant band crystals out to move them over to 2M and they are kicking around in your bench drawers. I need a couple pairs for 154.600 but also probably wouldn't turn down 2M crystals you aren't using.

MAGAZINE ----

* SHORT WAVE CRAFT [The radio experimenter's magazine]

Hugo Gernsback, editor
September 1936 issue [Vol VII, No. 5]

DESCRIPTION:

From Page 258 --

"The set illustrated on our cover this month is a 5-
meter super-regenerator, using Acorn tubes and
incorporating the very latest technical developments in
a circuit especially designed for this band. The
constructional details of this receiver are given in
full, with illustrations, on Page 264."

- - - - - - - - - - - -

This issue is of beautiful collector quality, and has
been protected with an acetate library (archival)
envelope. Very colorful red, blue, black, green, and
yellow front cover with picture of above-mentioned radio
+ brass straight key with the wording "Special Ham
Number." Seems to indicate lots of good reading for
hams, inside.

Pages have not yellowed and are in excellent condition.
Absolutely no dog-ears, rips, or stains. Good quality
printing paper used in this issue. Lots of ads, lots of
pictures, and lots of schematics.

Take a look back at what most folks of this time period
[Depression Era] could only dream of owning.

PRICE: $15 postpaid

1402. FS: VocaLine Ancient CBs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-19 00:00:00 UTC
From: Wayne Arnett <plm@rmi.net>
Message-ID: <01bcac62$4406cc80$6a205da6@plm.rmi.net>
Source record: 116960

A friend acquired a pair of VocaLine Model JRC400 CBs. Got to be early 50's, between them there are two plug-in antennas, one mic and one power cable. Appear to be four-tube units with no crystal (L/C freq tuning?), no paperwork. Any interest to collectors, or (and this is a stretch) conversion to 10 meters? Worst case, might look good on a boat anchor shelf....

ps has the solid state rectifier mod. When turned on the and tuned up one of the 6146s glowed a cherry red and smoked. The ps needs work because only half of the tube filaments light up. 32S1 looks superb. $300.00 for all. You ship from 92139.

I've got a Sky Rider Defiant, model SX-24. I think there may have been a higer-quality Sky Rider made during the same model years, but it's called something other than "Defiant" and the model number is different. I don't know if this is the same as the "dual-diversity" that you mentioned in your post. FWIW, the SX-24 is dual conversion and has a tunable crystal filter.

I got mine from my father's cousin. Her husband bought it new and used it daily until his death about 10 years ago. I replaced the wax paper capacitors at that time (still has original electrolytics!) and fire it up every week. Has great sensitivity and pretty good selectivity and stability. It's a really great set and BUILT like a tank. I've used it on the air up to 20 meters.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

Source record: 116971
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

In article (Bry) writes:
Hi Bry,

3B28 is a Xenon filled rectifier, and the 866A is a mercury rectifier. The tube voltage drop is different. Also the 866A needs a warm up time for all the mercury to evaporate befor you switch on the HT. Most effective operation with this tube is within a restricted temperature range, about 30 - 70 C degrees, I think.

There are a lot of differences between the 866A Mercury vapor rectifiers
and the 3B28s. The 866As can flash over easily, need to be preheated
especially if they have been laid on their sides and have a cool purple
glow. The 3B28s are much more forgiving.

MAGAZINE ----

* SHORT WAVE CRAFT [The radio experimenter's magazine]

Hugo Gernsback, editor
September 1936 issue [Vol VII, No. 5]

DESCRIPTION:

From Page 258 --

"The set illustrated on our cover this month is a 5-
meter super-regenerator, using Acorn tubes and
incorporating the very latest technical developments in
a circuit especially designed for this band. The
constructional details of this receiver are given in
full, with illustrations, on Page 264."

- - - - - - - - - - - -

This issue is of beautiful collector quality, and has
been protected with an acetate library (archival)
envelope. Very colorful red, blue, black, green, and
yellow front cover with picture of above-mentioned radio
+ brass straight key with the wording "Special Ham
Number." Seems to indicate lots of good reading for
hams, inside.

Pages have not yellowed and are in excellent condition.
Absolutely no dog-ears, rips, or stains. Good quality
printing paper used in this issue. Lots of ads, lots of
pictures, and lots of schematics.

Take a look back at what most folks of this time period
[Depression Era] could only dream of owning.

PRICE: $15 postpaid

From: wally@mindy.sys.sdl.usu.edu
Message-ID: <ojbnrqEPv4LZ@cc.usu.edu>
Source record: 116984

Greetings,

Decided I need more room, rather than the following stuff. Had a R-390A come in and stuff has got to go out to compensate....

Two Aerotron 5W10X. These are 2 meter AM radios, currently on 147.990. (The channel they were put on when I got them). 10 watts, run off 120vac. They work great. Find the vibrators and they will work on 6 and 12 volts too. I have an original manual. These are "lunchbox" style radios. $60.00 plus shipping for the pair.

Motorola 100 watt compa base station, currently on 36.4 mhz. Will go to ten meters easily. Power suppy has 866 rectifiers, nice glow, when keyed. Beautiful.
Runs a pair of 6146's for the finals.

Won't ship this thing. Will pull strips and ship them if needed. Have another spare receiver and 60 watt transmitter strip, too. Any takers on this? Lets talk offers or pickup (in which case it's free!!!).

Wally Gibbons, WB7ASQ
North Logan, UT 84341

Wayne,

I had a pair of old Vocalines but mine were modulated oscilators (MOPA)
operating on the then new 460 MC uhf CB band. I did not know that Vocaline
had any 11 meter equipment. I used them in the mid 60s for local (around
Philadelphia) 432 voice work. Got 3 miles out of them when working someone
with for real 432 equipment :-)

1431. Difference: 3B28s for 866As??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-19 00:00:00 UTC
From: bry@REMOVE.mnsinc.com
Message-ID: <33f989d0.5912950@news1.mnsinc.com>
Source record: 116989
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Can anyone tell me what, if any, difference exists between an 866A
and a 3B28?

I have a rig that uses 866As and I have some spare (nicer looking
3B28s) They both use the same base pin arrangement, right?
They both have 2.5V 5A filaments, right?

250 mA max current, 1000V DC out, max?

So what is the difference, other than perhpas the plate cap style?

Source record: 116995

Why do I have six (6) SB-10 SSB adapters I keep asking myself. Didn't have a good answer so four (4) must go. I'm keeping the 2 best for my Apache and DX-100 (don't fuss cause you would do the same). The remaining can be described as follows:

Complete
Original knobs
A couple have small meter cracks
Cases have assorted scratches
Manual copy or manual for you to copy and return
No interconnecting cables
Untested

$50 ea plus postage or interesting trade. They are untested but I'll guarantee they have no major problems. If one is acquired and subsequently identified as unfixable, I'll gladly refund the purchase price.

If you need additional information send me an e-mail.

Best 73,
gary

Well, the USPS is technically responsible for prosecution of
mail fraud, but you'd need a few hundred people with canceled checks
complaining all at the same time to get their attention.

Here's what'll work better -- Surplus Sales frequently has a booth
at hamfests. If every person who ordered but did not receive a
catalog were to complain loudly and persistently for five minutes
at every swap fest, their sales would fall to zero, their sales-
people would quit their jobs in frustration and disgust, and Surplus
Sales would get on the stick and mail catalogs.

OTOH -- there's an FTC regulation that is completely separate
from the mail fraud law (to successfully prosecute fraud, you
have to establish intent before the fact, and I fully believe that
Surplus Sales did intend to publish and deliver a catalog) that
requires all mail-order vendors to notify customers in writing if any
paid product will be back-ordered more than 30 days, allowing the
customer to obtain a full refund if desired.

Any lawyers like to draw up a boilerplate complaint and circulate it?
We could simply fill in the blanks. After the FTC and relevant
courts receive a few thousand filings, even if 90% are defective,
they'll rattle Surplus Sales' cage.

No, I am not enamored of Surplus Sales after seeing swap fest items
I sold at a reasonable price of $2 each ending up on their table at
the next swap fest priced at $50 each. It's a HOBBY, not a racket.

1455. FS: Swan 600 set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-20 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <33FBB839.6F4C@calweb.com>
Source record: 117059
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Swan 600 twins consisting of the following:

1. Swan 600R Custom with SS16 SSB filter plus the CW and
normal SSB filter
2. Swan 330 general coverge VFO unit
3. Swan FP-1 Phone Patch and Speaker
4. Swan DD76 Digital Readout unit
5. Swan 600T transmitter with VX-2 vox module

Equipment is in better than average condition, radio front panels near perfect, all knobs are clean an no chips, Internally they are a bit dusty (been in storage). Electrolytics fine shape and receiver works quite well. Transmitter is also functional although it could probably use a little tweaking and perhaps a pair of 6KD6s although they seem ok on the tube checker. Power is down on the upper bands. The accessories are all functional and are also cosmetically nice. no dents, rust or dings. couple of tiny scratches on the FP-1 phone patch front panel. The General coverage VFO is a nice addition and provides general coverage up to 30 plus mhz with a tiny gap in the 5 Mhz range. While the VFOs in the Transmitter and Receiver were probably Swan's best attampt in making these things stable, the General Coverage vfo takes a while to settle down but will after an hour or so. No modifications have been made to the units. The cases have a few scratches, but will touch up nicely with a bit of black crackel paint. I guess that about says it all. Need the room and the toy money. I will pay for the UPS versapacking fees.

$800 plus UPS from Sacramento, CA 95827

Thanks for the read

Source record: 117067

I have an extra cabinet for a Knight-Kit "Space Spanner" receiver. I would rate it a 6 on a 10 scale. The cabinet is covered with a light grey leatherette and outside of corner wear, there are no tears.

There are two holes in one side which appeared to be for some screws, and there are three half-inch holes on the back which have been filled.

$10 plus shipping from 60516-3114 or trade for Knight-kit or Allied Radio stuff. Contact me at jvercellino@sprynet.com.

73, John WB9OVV

$250 and you pay shipping. Jim W5AI (Okla City)

1465. Misc. light BA gear for trade for other light BA gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-21 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19970820.205016.11582.5.w5jv@juno.com>
Source record: 117069

Hello folks,

I have the following light pieces gathering dust and available for trade. All available (separate or together) for trade for gear which you may have no interest in. Will be out of town for several days, but will respond to all by Sunday or Monday. Have a good weekend. No cash offers; just equal swap FOB each other.

1. Hammarlund speaker; bluish, smaller 8" square about, no emblem; said to match the early HQ100 series. Has internal 4 X 9 speaker. Good condition. Press-wood insert bent from abuse but seems easy repair. Need Hallicrafters SX-111 style speaker with chrome lower front label or trade for what-have-you.

2. Heath HX-11 novice xmtr. Needs refurbishing. About a 6 on a 10 scale. Has two slide switch mod on far left to accomodate dual crystal selection or VFO. Trade for what-have-you. Need comparator unit to the URA8 teletype demodulator set up or clean CV89A or CV57A modules.

3. Hallicrafters SX-25; original; works; needs new plastic (thin) dial window (old has warped). Knob set 100% and an 8 on a 10 or better. Easy restoration. Called the Super-Defiant. Trade for what have you.

4. Heath HW7 QRP xcvr. Complete; manual copy; case and panel need repainting, otherwise will make a very nice rig. Clean surface where paint has dropped but appears not to have been under-coated. Trade for what have you.

5. Drake SW4A short -wave receiver. Uncommon 4 series unit which will accept a center mounted directions LF antenna. Inside very nice; all tubes, xtals, knobs in tact. Front panel very nice; case needs painting (upper and lower halfs). Trade for what have you.

6 Hammarlund HQ-140-X general coverage. From estate sale. Complete w/cabinet. Not powered up. Looks like a straight forward winter project. Trade for what have you.

Main interests here are part sets to back up existing equipment. If you have a broken amp in the HT33a/b series, SB6xx series, or a xmtr in the HT33b/HT44 types, give it a thought.

73, Doug W5JV

The Johnson SSB adapter worked with the Valiants and the Desk Kilowatt
but not the Ranger series. They had a mode switch that simply turned
them into a linear amplifier (grid driven) that amplified the SSB signal
fed ino the proper port on the cabinet rear. I never owned a Viking 500
but I believe it worked the same. The Rangers did not have that
capability, andwere for AM and CW only. 73, Dick W0EX

Congrats on your 180A acquisition -- it is one of the best receivers ever made. FYI -- there is no difference, as far as I can tell, in the manual for the 180A versus AX. I have an AX purchased in 1980, and have the original manual. I'm sure there were subtle changes in the manuals over the years of 180 production but Ithink you would be OK with any 180A manual (as opposed to the 180C which had the rectifier tube in it sted the solid state).

>Dave K4JRB

Hi Dave,
W2VCZ was Robert Stankus, he basically collected the mods from various magazine articles of the day. For a price, he would modify your rcvr and add an overlay on the bezel that said 75A4A. I have worked on rcvrs that he had modified, and compared them to a stock A4.
Best to say they helped some problems but added new ones. I also once owned a Johnson Ranger that he had built. I have to say the man was a craftsman--his work was well done.
The controversy I best remember was when he led a campaign with the FCC to outlaw AM operation on the ham bands. Obviously it failed.
Last I heard he was doing well and living in 5-land- Texas I believe.

Stu,

If you don't turn up one of those (a friend of mine and I built one in 1959), you might seriously look into the MFJ regen kit. I got one and put it together with my seven-year-old (who handled quite a bit of the soldering). The results were surprisingly impressive and he has a ball SWLing it.

Stu,

Good luck on your "Hopper" quest. They are out there
and run the gambit of condition and price. Make sure
the first lesson you teach that young "Sparks" is the
evils of AC-DC radios and the "HOT" chassis syndrome.

There are some nifty "modern" regens out there. The
TenTec multiband kit is pretty good, well built, and
relatively inexpensive (ca. $59.00).

The other thought would be to dig up a schematic and
build a regen receiver from scratch.

Have fun! 73 Dave K7HMP

Message-ID: <5ti36j$t8k@northshore.shore.net>
Source record: 117090
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have some R-390A modules and sub-assemblies available for sale.
Unless otherwise indicated they are from a Stewart Warner, 1960
contract. NOTE: I do not have any meters or covers.

Power Supply (less tubes) tested and working $25.00

Audio Deck (including tubes) tested and working $50.00

RF Deck (including tubes, calibrator crystal. The .5-1.0
slug rack and digital counter are missing.
Motorola manufacture. Untested. $45.00

Crystal Oscillator deck - Teledyne manufacture. Complete
with tube and crystals (missing one and cover). $20.00

Case parts (not including front panel) $20.00

Front Panel (including frequency readout cover) but no
metal tag). The panel is in pretty good
condition. There is some wear arounf the
KC change knob and there is a small brass
tag riveted to the top of the panel indicating
this radio was a Navy veteran. There is no $35.00
yellow stripe painted on this panel.

Wiring loom including the connectors that fit on the modules $15.00

Pots, switches and knobs $20.00

The IF deck amd PTO are not available (otherwise I would
build up another receiver ;~)

If interested please reply by e-mail.

For Sale: Johnson 6N2 VFO - this is NOT the 6N2 transmitter, it is the little VFO for 6 and 2 meter crystal rigs. Cab. & front panel condition is very good - excellent. dial glass is perfect. All of the cab. screw heads have a little rust on them, but none on the painted cab. itself. Has two cables coming out of it, one has a FT-243 crystal holder wired on it and the other is cut off at the far end(power?). Untested. $30.00 plus $6.00 shipping.

I thought it was just because I live in Canada, but I also have
been "overcharged" for goods. In Feb. of this year I ordered 12 Collins
feet from SSN for 2 bucks a pop. I thought a bubble pack envelope
would get these to Vancouver OK but no, they were put in a 6" x 6" x 5"
box. I was charged $14.00 'shipping & handling' for a total of $38.00US.
As if that wasn't enough our friendly Customs got into the act to the
tune of some $15.00 CAN. So we have $38.00US converted to CAN=$53.00
plus the $15.00 and we get SIXTY EIGHT BUCKS!!! As they say, "a dollar
is always a dollar" no matter which country you are in, so I think I
was "seen off". Needless to say I avoided their booth at Dayton also.
This was definately the worst transaction I've had in 29 yrs of
hamming. Oh, they also got an extra $5.00 out of me for a catalogue
which I have little faith in receiving.

Not to stick my nose in others people's business, but this Surplus Sales of Nebraska outfit has an ad on page 142 of the September QST.

If they do business the way I have read in these postings then the QST advertising department should be notified that this operation is below QSTs advertising standards.

>--------------------------END OF THIS MESSAGE--------------------------

Hello Stu:

There is no CW filter for the KWM-2/2A. The radio was designed primarily
as a SSB rig and only has provision for ONE mechanical filter. The CW
circuitry is an afterthought. I don't know anyone who uses a KWM-2 on CW.

1505. Need boat anchor brought from Minnesota to S.C., will pay you!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-22 00:00:00 UTC
From: kr4wm@sccoast.net
Message-ID: <MPG.e6753ff83b6af29896b7@news.infoave.net>
Source record: 117100

Greetings- I'm attempting to locate someone who may be making a trip from Minnesota to South Carolina (or any point past halfway) sometime in the near future. I've purchased some electronic equipment (old, boat-anchor ham radio equipment) from a fellow in Minneapolis, and need to get it hauled down here. I thought about UPS, and also flying up, renting a truck, and driving it back. Both appear to be cost-prohibitive (UPS somewhat less so, but still, we hams are known for being cheap, right?). If you're planning a trip this way anyhow, don't mind some extra baggage, and are interested in making a little extra spending money, say $100 or so, let me know by e-mail reply and I'll see what I can set up. I'm planning a trip to the Shelby, NC hamfest on August 30. If you need anything brought from here up there, I'll oblige.
73, Web Williams in Myrtle Beach, SC

(Shipment consists of two equipment racks, 24x24x36 inches, each weigh about 150-200lbs, but can be disassembled to make it easier to carry. There may possibly be some smaller items that go with it.)

Hello, fellow BAers

I saw a reference a few years back about an article supposedly entitled "Sorry, OM, I have to Go Chase Elephants from the Garden." It was supposed to be about the excuses that hams use when they want to end a QSO. It was supposed to be in one of the ham mags, but I have searched numerous sources without any luck.

Does anybody remember this article? In which publication/date was it? Does anybody have an electronic copy to mail to me or post to the NG?

Thanks,

Hi gang,
I've got a Gonset 66B mobile receiver with the deluxe power
supply (6&12 VDC, and 110VAC with speaker built in) for sale
for $75 plus shipping. It includes the original manual, and is
untested but complete. I'd be willing to trade for a Halli SX-117
in good, unmodified condition, not necessarily working.
I'm located north of San Francisco.

Steve WA4DUT/6

Greetings Antique Radio Collectors!

The Antique Radio Collectors & Historians (A.R.C.H.) of Greater St. Louis would like to invite you to their Fall Swapmeet & Picnic, Saturday, September 27th, 1997 at Paul Schroeder Park in Manchester, MO.

Directions to Paul Schroeder Park: I-270 to Manchester Rd (Hwy 100). West on Manchester Rd. to Old Meramec Station Rd (first street west of Hwy 141). South on Old Meramec Station Rd to the park. Event is in large pavillion west of swimming pool.

Visitors are welcome and encouraged to bring items to swap!

NO SWAPTABLE FEE. PLEASE BRING YOUR OWN TABLES FOR SWAP ITEMS. A nominal $3.00 donation is requested to cover the cost of the barbecue.

The swapping begins at 9:00 a.m. A picnic lunch will be served at 11:30 a.m.

Partial Activities List:

*Swapmeet of Radio/TV/Antique Electrical Apparatus
*Raffle of Radio & Radio-related items!
*Barbecue Pot-luck lunch (please bring a dish)
*Homebrew Regenerative Receiver Demonstration

For More Information, please contact:

Derek Cohn - WB0TUA
23 Topton Way #1E
Clayton, MO 63105-1662

>. Please spare me the flames. I am truly interested in finding out
>what I missed.

You didn't miss anything, the old S-line had pretty poor Ip3, typically -25 dBM, poor dynamic range and excess sensitivity, and only tuned 200 KHz per "band". It also had pretty bad blowby on the mechanical filters too unless you modified the things. I sold 5 complete S-lines when I closed my contest station, and none of them (Including a $4400 pair of round emblems with pretty chintzy plastic cabinet rings) went for more than $500 each. Problem is that there's a limited number of them, and the number of nostalgia buffs is greater. (They're the ones easily identified by their painting history with a rosy pink). They were as good as you got "in the old days", but there's plenty of stuff that excels it today, and you don't have to pay the $14 that I did for a new 6AU6 for the VFO that I had to pay back in 1984. (Last time I bought a J-310 FET for an oscillator, they were 5 for a buck.)

> Stan

Hi Stan

You hit it on the head. Just Harleys with tubes. Basically the S line
gear is ham gear built and designed like ham gear should have been built
like, but for a lot less money than Collins charged. I think there was
some off shore upward price pressures on the icon status Collins gear
gave, and this pressure has yet to subside completely although a ham
friend in Japan says that they are starting to come to their senses to
some degree. I have a lot of the junk myself and like to putter with
it, but I'll not pay $600 for a 312B5 remote VFO
[a recent for sale posting asked somewhere in that regiong for one]..
Does it perform as well as modern high end imports? Probably not, but
hell!. It does not have to.. It's Collins! heh heh

Best to all

Bob, KE6F

Hi Doran,
Tnx for bringing up that point on the 400Hz requirement. I also have a few of the collins 400 hz inverters for these rascals and posted them separately in the radio groups. I have had a lot of fun puttering with the 618t(3) that I'm keeping. amazing radios for the period.

Bob

Well Stan I can't reply to NOSPAM but I can reply to the group. I like many bought some Collins gear just to get it out of my system then resold it. It's hard to loose money on the stuff.

Yes, the new gear is better in many respects however, let's see how the FT-1000 fares out in the year 2039 !

Depends.

In the case of HF gear, the RF performance between the new gear and the old gear is pretty much the same; the measured sensitivity on my old 390A is better than any new Kenwood, but in actuality the ionosphere is the limiting factor and the difference between .1 mV and .5 mV sensitivity doesn't make a huge difference.

But the old Collins gear feels very good. It's well laid out, and you can put your hand on a knob without having to poke around through these tiny little panels with a billion controls on them. And, it does perform well, of course.

It's also a lot easier to work on than the newer gear. Not all that easy, mind you, but certainly an improvement.

The 390A originally sold to the government for about $6,000, and that was when dollars were worth considerably more than they are now. So the fact that you can pick one up for $250 at a hamfest is still impressive. It's a pretty good deal, overall.

1531. INVEST $5 AND MAKE $10,000.00!!!!!!!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-23 00:00:00 UTC
From: "M.GLT" <sac26447@csus.edu>
Message-ID: <5tn0b5$otc@news.csus.edu>
Source record: 116936

3617,,
Newsgroups: alt.comp.periphs.mainboard.abit
Subject: INVEST ONLY $5 AND MAKE BIG $$$$$$..... IT WORKS!!!

PLEASE take 60 seconds to consider the following:

A little while back, I was browsing these newsgroups, exactly like you are now and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investement of $5.00! So I thought,"Yeah, right this must be a scam, one of those make money fast posting you see every once in a while.",but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of these 5 names and address stated in the article. You than place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands), NO catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what I have got to lose except 5 stamps and $5.00, right? Like most of us I was skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $5.00.............

Well GUESS WHAT!!...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and its still coming in......

It's certainly worth $5.00, and 5 stamps. I spent more than that on the lottery!

Let me terll you how this works and most importantly WHY it works...also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and erite the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Add your name and address. Now get five $1.00 bills and place ONE inside EACH of the five pieces of paper so that the bill would not be seen through the envelope to prevent thievery. Next, place one paper in each of the five envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and $1.00 bill. What are you doing is creating a service by this. THIS IS PERFECTLY LEGAL!!

Mail the 5 envelopes to the following addresses:

#1 A. Lillian 1671 E. Grandview Blvd. Kissimmee, FL 34744

#2 D. Black 1036 N.E. 128th St. #C N.Miami, FL 33161

#3 J. Kralik c/o AESPOB 149 Long Beach, NY 11561

#4 T. Long 7787 Mitchell Dewitt RD. Plain City, OH 43064

#5 M. Galatolo 5009 "P" Street, Sacramento, CA 95819

STEP2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR NAME as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close as the original as possible. Now post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know how to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News, which is on the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and re-type this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When you are done typing the WHOLE letter, click on FILE above the send button. Then SAVE AS. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT. (so you don't have to type it 200 times :-)

5) Now that you have saved your letter, go ahead and send your first copy! Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the TO NEWS buttom again. Type in your flashy subject in the SUBJECT BOX then go to the message and place your cursor here. Now click on ATTACHMENT" which is right below the SUBJECT BOX. Click on attach file then find your letter wherever you saved it. Click once on your file then click OPEN then click OK. If you did this right, you should see your filename in the ATTACHMENT BOX and it will be shaded.

NOW POST AWAY!!!

IF YOU ARE USING INTERNET EXPLORER: its just as easy, holding down the left mouse button, highlight this entire article, then press the CTRL key and C key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT Go to newsgroups and press POST AN ARTICLE type in your flashy subject and click the large window below. Press CRTL and V and the article will appear in the message window. ** BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES**.
Now re-highlight the article and recopy it so that you have the changes...then all you have to do for each newsgroup is CTRL and V and press POST. Its that easy!

In AOL you copy this text, after making your changes, to the clipboard, then paste the text to the "send new message" window, under where you typed in your catchy phrase, in the newsgroup you are about to post in.

THATS IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

You will be receiving the money from around the world within days! You may eventually rent a P.O.Box due to the large amount of mail you'll receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:

Out of the 200 posting, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00r me, now those 25 each make 200 MINIMUM postings with my name at #3 and only five replies each, I will bring an additional $125.00 dollars. Now those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!! With an original investement of only $5.00!!! AMAZING! And as I said 5 responses is actually VERY LOW! The average is probably 20 to 30. So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759.375.00

When your name is no longer on the list, you just take the last posting in the newsgroups and send out another $5.00 to names on the list, putting your name at #5 again. The thing to remember is that thousands of people all all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give a try? Estimates are at 20,000 to 50,000 new users, everyday, with thousands of those joining the actual internet. Remember play FAIRLY and HONESTLY and this will work. You just have to be honest and play by the rules. Also keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!

GOOD LUCK to all and plese play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00 bills, and that'ster seven or eight weeks!! Then he sent

the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10K. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again.....

P.S. After all this all I can say is that you should think it over. In my point of view it works and is a very good investment.

Sincerely,

T.Long

++++++++++++++++++++++PLEASE take 60 seconds to consider the following:

A little while back, I was browsing these newsgroups, exactly like you are now and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investement of $5.00! So I thought,"Yeah, right this must be a scam, one of those make money fast posting you see every once in a while.",but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of these 5 names and address stated in the article. You than place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands), NO catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what I have got to lose except 5 stamps and $5.00, right? Like most of us I was skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $5.00.............

Well GUESS WHAT!!...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and its still coming in......

It's certainly worth $5.00, and 5 stamps. I spent more than that on the lottery!

Let me terll you how this works and most importantly WHY it works...also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and erite the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Add your name and address. Now get five $1.00 bills and place ONE inside EACH of the five pieces of paper so that the bill would not be seen through the envelope to prevent thievery. Next, place one paper in each of the five envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and $1.00 bill. What are you doing is creating a service by this. THIS IS PERFECTLY LEGAL!!

Mail the 5 envelopes to the following addresses:

#1 A. Lillian 1671 E. Grandview Blvd. Kissimmee, FL 34744

#2 D. Black 1036 N.E. 128th St. #C N.Miami, FL 33161

#3 J. Kralik c/o AESPOB 149 Long Beach, NY 11561

#4 T. Long 7787 Mitchell Dewitt RD. Plain City, OH 43064

#5 M. Galatolo 5009 "P" Street, Sacramento, CA 95819

STEP2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR NAME as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close as the original as possible. Now post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know how to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News, which is on the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and re-type this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When you are done typing the WHOLE letter, click on FILE above the send button. Then SAVE AS. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT. (so you don't have to type it 200 times :-)

5) Now that you have saved your letter, go ahead and send your first copy! Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the TO NEWS buttom again. Type in your flashy subject in the SUBJECT BOX then go to the message and place your cursor here. Now click on ATTACHMENT" which is right below the SUBJECT BOX. Click on attach file then find your letter wherever you saved it. Click once on your file then click OPEN then click OK. If you did this right, you should see your filename in the ATTACHMENT BOX and it will be shaded.

NOW POST AWAY!!!

IF YOU ARE USING INTERNET EXPLORER: its just as easy, holding down the left mouse button, highlight this entire article, then press the CTRL key and C key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT Go to newsgroups and press POST AN ARTICLE type in your flashy subject and click the large window below. Press CRTL and V and the article will appear in the message

window. ** BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES**.
Now re-highlight the article and recopy it so that you have the changes...then all you have to do for each newsgroup is CTRL and V and press POST. Its that easy!

In AOL you copy this text, after making your changes, to the clipboard, then paste the text to the "send new message" window, under where you typed in your catchy phrase, in the newsgroup you are about to post in.

THATS IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

You will be receiving the money from around the world within days! You may eventually rent a P.O.Box due to the large amount of mail you'll receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:

Out of the 200 posting, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00r me, now those 25 each make 200 MINIMUM postings with my name at #3 and only five replies each, I will bring an additional $125.00 dollars. Now those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!! With an original investement of only $5.00!!! AMAZING! And as I said 5 responses is actually VERY LOW! The average is probably 20 to 30. So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759.375.00

When your name is no longer on the list, you just take the last posting in the newsgroups and send out another $5.00 to names on the list, putting your name at #5 again. The thing to remember is that thousands of people all all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give a try? Estimates are at 20,000 to 50,000 new users, everyday, with thousands of those joining the actual internet. Remember play FAIRLY and HONESTLY and this will work. You just have to be honest and play by the rules. Also keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!

GOOD LUCK to all and plese play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00 bills, and that'ster seven or eight weeks!! Hello Carl: I think the Star Roamer sold for 39.95 as a kit. It is a collectors item that has sold around 50 dollars, maybe more. Depends on its codation of course, and if someone is looking for one.

1542. Unassembled Heathkit to trade for same

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-24 00:00:00 UTC
From: Terry Perdue <terryp@halcyon.com>
Message-ID: <01bcb0a2$8990f3e0$22203fce@default>
Source record: 116947

I found a DF-2 "Mariner" Radio Direction Finder at a swap meet last weekend. The carton had been opened, but nothing was disturbed. This unit was introduced for $99.95 in 1958, and was marketed to boaters, hikers, hunters, etc. It runs off of six "D" cells, covers the AM broadcast band plus 200-400 kHz, and has a (pushbutton) lighted dial. The case is the same style and perhaps slightly smaller than the "lunchboxes", but is two-tone "sea-foam green". I also have an assembled unit that is missing the ferrite rod antenna.

If you have an unassembled Heathkit to trade, and would find this one more to your liking, let's talk. And, if yours is worth more than mine, I have other swapping stock to make up the difference.

Terry

I have a very nice Ameco R5A for sale. It has all the original knobs, and the cabinet, lettering is like new. Also have the original manual. It was used by a heavy smoker before me, so could use an internal cleaning. The R5A came after the R5, and added a plug-in connector on the rear chassis for a Q-multiplier input. I believe this was the receiver sold by Ameco to go with the little AC-1 transmitter. $95 plus shipping.

1546. R390A Gain Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-24 00:00:00 UTC
From: "Bruce J. Howes KG2IC" <bhowes@buffnet.net>
Message-ID: <34009B85.7DDD98CE@buffnet.net>
Source record: 116951

I have a Collins R390A that seems to have developed a problem with 80 meters. The other bands seem fine. The gain does not seem to be as high on 80 in comparison to the other bands. I have verified this both with an external antenna and using the calibrator signal from the receiver.

I am new to the 390 series, appreciate the help.
Before I dig out the manual, does anyone have any tips what to reference.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

```
Announcing 10 *NEW* Mailing Lists (Reflectors)
-----
1. MFJ-AMERITRON
2. GPS
3. STANDARD
4. SPECIAL EVENTS
5. ADI-PREMIER
6. REPEATERS
7. HAM-COMPUTERS
8. TVI-RFI-EMI
9. TEST-EQUIPMENT
10. YUPI
-----

MFJ-AMERITRON is a mailing list (reflector) devoted to the
discussion of radio equipment manufactured by MFJ Enterprises
of Starkville, Ms and affiliates (Ameritron, Mirage, etc).

* Amateur Radio Equipment
* Multimode, Packet Data Controllers
* HF and VHF Amplifiers
* Accessories
* QRP, VHF, Test Instruments
* Buy, Sell
* Anything MFJ Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe MFJ-AMERITRON

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe MFJ-AMERITRON

To post to the mailing list, send email as follows:
TO: MFJ-AMERITRON@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

-----
```

GPS is a mailing list (reflector) devoted to the
discussion of the Global Positioning System and
uses relating to amateur radio, experimenting, or
other activities.

* Hand Held GPS Units
* Trackers
* Amateur Radio Applications
* Interfacing
* Buy, Sell
* Anything GPS Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe GPS

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe GPS

To post to the mailing list, send email as follows:
TO: GPS@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

STANDARD is a mailing list (reflector) devoted to the
discussion of radio equipment manufactured by Standard
Amateur Radio Products.

* VHF/UHF Radios, HTs, etc
* Buy, Sell
* Anything Standard Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe STANDARD

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe STANDARD

To post to the mailing list, send email as follows:
TO: STANDARD@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

SPECIAL-EVENTS is a mailing list (reflector) devoted to the
discussion of Amateur Radio Special Events and Operating Events.
Operating Events (like Field Day or State QSO Parties) while
at times competitive lack some of the characteristics of a
true Amateur Radio Contest, but any related discussion is quite
welcome here.

* QSO Parties
* Special Events Stations
* Expedition Announcements
* On The Air Activities

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe SPECIAL-EVENTS

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe SPECIAL-EVENTS

To post to the mailing list, send email as follows:
TO: SPECIAL-EVENTS@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

ADI-PREMIER is a mailing list (reflector) devoted to the
discussion of radio equipment manufactured or distributed
by Premier Communications of Walnut, Ca.

* VHF/UHF Radios, HTs, etc
* Buy, Sell
* Anything ADI/Premier Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe ADI-PREMIER

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe ADI-PREMIER

To post to the mailing list, send email as follows:
TO: ADI-PREMIER@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

REPEATERS is a mailing list (reflector) devoted to the
discussion of Amateur Radio Repeaters.

* Repeater Owners
* Equipment, Sites
* Linking, Systems
* Coordination, Users
* Buy, Sell
* Anything Repeater Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe REPEATERS

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe REPEATERS

To post to the mailing list, send email as follows:
TO: REPEATERS@qth.net

This reflector is provided by Al Waller K3TKJ at no
cost and I (K7ON) perform the routine administrivia.

Please contact me with any questions: k7on@qth.net

HAM-COMPUTERS is a mailing list (reflector) devoted to the
discussion of personal computers (or other) used for amateur
radio, communications, or experimenting.

* PCs, Macs, Amiga, etc
* Interfacing
* Upgrades
* Enhancements
* Buy, Sell
* Anything Ham Computer Related

To join the mailing list, send email as follows:
TO: majordomo@qth.net
SUBJECT:
BODY: subscribe HAM-COMPUTERS

To be removed from the mailing list, send email as follows:
TO: majordomo@qth.net

Problem solved. It was the Canned Diode (1N1239) inserted into the 5r4 octal socket. After trrouble shooting (dissconnect the caps, measure the resistance, measure the transformer winding resistances, etc, I looked at the socket that the diode can was plugged into. H.m.m.m still had the filament winding leads in place. So I replaced the diode with a tube from my handy dandy flea market stock and voila.... Now all I need is to uphgrade my license so I can work six and two meters. PS, when I powered it up I had an oil filled dummy load that my son helped me build one summer....

Yup, and there's a growing number of people that would agree that such a speaker is indeed worth that kind of money. They tend to quote nonsense about the "law of supply and demand". I don't care about "supply and demand" or what some price guide says something's worth. I do care about buying and selling stuff at reasonable(affordable) prices, and getting the gear into the hands of folks who'll use it and care for it . .

jrro@watson.ibm.com wrote:
: In <33EF8BA3.3BB0@larc.nasa.gov>, "John M. Franke" <j.m.franke@larc.nasa.gov> writes:
: >Gassy tubes have a sharper plate current versus grid voltage curve which
: >produces greater detecting efficiency. However, it functioned best at
: >low plate voltages (<30V) and was neither stable nor consistant from
: >tube to tube. The get the best results, both the filament current and
: >plate supply had to be "manipulated." The steeper curve resulted from
: >electrons ionizing the gas.
: >Hope this helps,
: >John
: >j.m.franke@larc.nasa.gov

: I suspect that the plate characteristics of one of those 00As has kinks
: and bends in it - these non-linearities make the tube a better detector,
: if one can operate on top of them by doing the knob twiddling.

: No doubt the kinks are a direct result of ionizing the gas - the gas atoms
: have an absorption spectrum such that electrons of only a certain
: energy can be absorbed. I recall the "Franck-Hertz" experiment, where
: one can effectively map out the ionization potentials in a gas by measuring
: the plateu levels in the plate current curve of a special vacuum tube (well,
: not really a "vacuum" tube...).

: Jim

If the tube is very gassy, a magnet put against the glass in the correct
position may improve performance.

1558. WTB DRAKE TR7R7 Selectivity Filters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-25 00:00:00 UTC

FWIW, these bulb-based audio generators are very non-fussy
about the filament structure of their "active element" --
so a nightlight bulb should work FB well into the kHz range!

BTW, this oscillator design was the core of Hewlett-Packard's
first product, a laboratory audio oscillator.

1565. 2 NEW TOYS ARRIVED TODAY

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-25 00:00:00 UTC
From: hammarlund@jacksonmi.com
Message-ID: <3400a070.26688781@207.126.101.81>
Source record: 116871

well just wanted to share my good fortune with you all.
today my new toys arrived..via a friend ...delivery
toy 1. a collins 212S-1 stereo broadcast console..cir. 1967
R.E. ..has provisions for:
10 local stereo inputs, 1 network input, & 4 stereo remote inputs.
150/600 ohm output, 10 watt monitor amp, cue, control relays, &
intercommunication system incorporated...
even came with original manual..
needs usual cleanning...very nice potential tho...
size: 37 3/16" wide x 17 13/16" footprint x 14 1/2" top
weight:HEAVY! took 2 of us to carry it...

toy 2. an LPB Signature S-15 8 channel console..cir 1973
has provisions for:
4 or more mic inputs, 15 hi level inputs, equalized gain in program &
audition, remote line talk-back, 3 OTA light & speaker muting relays
size: 32" W X 14.5" D X 9" H
WEIGHT: heavy, but nothing compared to the Collins...I carried it alone.
oh, it also has original manual...
it looks suspiciously like RCA, it uses their knobs, and they are
original according to pic in manual..
now, all i need is to gather the rest of what i need to put a real (low
power) BC station on the air...(no license required if below 100 watts
according to new ruling by FCC..just need to find out in what band(s) or
segments of..

Best Regards Robert Fowle KC8DBC

Hello:

Thanks for the good response to my last list of Radio Literature
for sale. A lot of stuff is gone.....but there are still some nice
items left. I offer what is left at reduced prices .....some as much
as 50 % lower. Check out the lists and see if there is something you
need. A new high end FM tuner to use with my new FM Beam and Tower
necessitates this sale.
All prices are in USA Dollars...and shipping is extra. Please email me
direct at..... radiorob@serix.com to reserve any of these
items.

Thanks...ROB.

Potter and Brumfeld KA-1211,
10,000 ohm coil.

Rectifiers (4 each)
Sarkes Tarzian, 500 MA
Type 1N1084 (M-500)

Thanks much
Greg KB6WKW

1572. SP600 JX21 problem: a real poser

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-26 00:00:00 UTC
From: art@comet.ucar.EDU
Message-ID: <Pine.SOL.3.96.970825212548.6561C-100000@mother.comet.ucar.edu>
Source record: 116877

PROBLEM: Unstable, "twittery" signals from 13 Mhz - 14.8 Mhz

SO FAR, I'VE:

1. Cleaned the connecting pins on all the tuned circuits on
the bandswitch turret, paying special attention to those on the
affected band.

2. Re-heated the connections on each of the tuned circuits for
the affected band. Paid special attention to the tuned
circuit for the OSC, removing it from the turret and
inspecting for damage. The 120 pf cap checks out ok. The
190 pf and 12 pf caps are very solidly in place and will
have to be snipped out to check (so haven't).

This problem was noted in the maintenance log of the previous owner.
He switched out various tubes to no effect.

What really puzzles me is why this small stretch of frequencies is
affected while the lower part of the band isn't (below 13 Mhz). The
main tuning variable cap is in good condition visually, and the same
position of the cap works fine on the other bands.

Higher frequencies on the next band seem to be OK (tho' have heard few
CW signals, commercial or otherwise, above 15 Mhz). Haven't found any
other "dead" spots yet (twittery spots?).

Has anyone else run into such a problem on this or similar receiver?

Tnx & 73 de Art, WA5OES

1581. FS-Corvair Pickups and stationwagon 1961?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-27 00:00:00 UTC
From: wertztire@aol.com
Message-ID: <19970827154201.LAA17880@ladder01.news.aol.com>
Source record: 116886

I have a friend that has two chevy corvair pu's for sale. One is a rampside and the other has a regular pickup tail gate. These are either a 60 or 61 and both run.
but are not being used daily. He also has a covair stationwagon about a 1960 and its rebuildasble with some lf fender damage. He wants to sell them as a package and will include some extra engine and parts. They are in Sedona Arizona

If interested let me know

Bob, NF7E

1582. Re: Correct price?

Newsgroup: rec.radio.amateur.boatanchors

Source record: 116887

I sold one in the past 90 days (round-emblem rack-model) for $725. I guess it depends on A. How badly you want/need to sell and B. How badly you want one.

>---

I commonly see the the upper 3 and 7 mhz bands being low even in properly aligned receivers depending on receiver age, etc... To me, "low" means say a 10db s/n + n sensitivity of .8uv or even 1.0 uv v/s .2 uv on the other bands.

I'll second the crystal being the source of the failure. Were the either of the variable IF's at fault, the gain would be down everywhere. There is some case to it being out of mechanical alignment especially if the end points of the PTO are not set. This causes the electrical length of the PTO, being other than exactly 1 mhz wide, not to track the cam profiles.

Again, that would be a problem regardless of the band selected.

I restore them for fun and find they are among the finest AM receivers available to the amateur today.

Dear Friend,

Greetings! I am a retired Attorney, and about two years ago a man came to me with a letter. The letter he brought me is basically the letter in your hands. He asked me to verify the fact that this letter was legal. I told him that I would review it and get back to him. When I first read the letter my client brought me I thought it was some off-the-wall idea to make money. However, a week and-a-half later we met in my office to discuss the issue. I told him the letter he originally brouht to me was not 100% legal. I suggested a few changes with which the letter would be 100% legal.

I was curious about this letter, and my client told me how this plan works and suggested that I give it a try. I thought it was a long shot and would be a wast of time, so I decided against participating. However, before my client left, I asked him to keep me updated of his results. About two months later he called me to tell me he had received over $800,000 in cash!! I didn't believe him, so he suggested that I try this idea and find out for myself. I thought about it for a couple of days and decided that I didn't really have anything to lose, so I asked my client for a copy of the letter. I followed the instructions exactly, sent out 200 copies, and sure enough, the money started arriving! It came slowly at first, but after 3 weeks, I was getting more mail than I could open in a day! The money stopped coming after about three months. I kept a precise record of my earnings, and they totaled $968,498.00!!

I was earning a good living as a lawyer, but anyone in the legal profession, or even anyone who owns their own business will tell you, there is a lot of stress that comes with the job. I told myself that if things worked out, I would retire from my job and travel. I decided to try the letter again, but this time I sent out 500 letters. Well , three months later, my earnings totaled $2,344,178.00!!! I just could not believe it. I met with my former client (and now my friend) for lunch to find out how it worked. He told me there are quite a few similar letters going around. What made THIS ONE DIFFERENT WAS THE FACT THAT 6 ADDRESSES APPEAR ON THE LIST, AND NOT 5 LIKE MOST OF THE OTHERS. This fact alone results in your name being on far more returns. Of course I was thankful that he had shown this plan to me, but he was just as thankful that I had suggested the changes to ensure that this plan was legal since most people don't want to risk doing something illegal.

I'll bet that by now you are curious to know the little change I suggested in my friend's original letter. Well, if you send a letter like this out, to be legal you must actually sell a product or service

if you expect to receive a dollar. I told my friend that anyone sending a dollar back to him must receive something in return. You have received this letter due to the participation of each of the 6 persons given below. This letter and the plan given within this letter are a "product" that you have received. Thus, you will be sending $1.00 to each of the 6 persons given below in exchange for receiving this letter and for asking them to provide the "service" of adding you on their mailing list.

THIS IS A SERVICE AND IS 100% LEGAL BUSINESS OPPORTUNITY WHICH IS COVERED IN TITLE 18, SECTION 1302 AND 1342 OF THE POSTAL AND LOTTERY LAWS.

NOW, PLEASE FOLLOW THESE TRIED AND TRUE STEPS TO OBTAIN THE AMOUNT YOU DESIRE:

1) Immediately send a $1 dollar bill to each of the 6 people on the list below. Wrap this dollar in a note with the words: "Please put me on your mailing list." (Remember, in this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Include your address. You do not need to include your name. This is the key to the program! Also, let each person know what number they are in the letter so he/she knows which cycle he is receiving the $1.00 from. Make sure that you retain EVERY name and or address sent to you, either on computer or hard copy, but do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the I.R.S. or some other government agency question you, you can provide them with this proof! Therefore you will start a list of all the people who send you a dollar requesting to be added on a mailing list. Actually, you will want to safeguard this list because it can generate even better responses and much more money later! See step #4 below.

2) Remove the name next to the #1 on the list, and move the rest of the names up one position. Then place your name in the #6 spot. Thus, #6 becomes #5, #4 becomes #3, etc., and YOU will be #6 on the list. DO NOT EDIT THIS LETTER ANYMORE BEYOND THIS POINT. When you are mailing this letter, you may edit the references to the internet.

3) Post this letter in at least 250 newsgroups, I do 5 groups per post. You can simply copy the contents of this letter and past it to the newsgroups of your choice.
IMPORTANT NOTE: Please pay attention to the newsgroups in which you post. If there is an abundance of similar letters, you may want to seek another newsgroup. Thus, pat respect to the harmony of the newsgroup and use common sense. There are plenty of newsgroups on the Internet. (I think there are close to 18,000 of them.) ALSO, PLEASE POST IN APPROPRIATE GROUPS AND SPREAD YOUR POSTINGS OVER MANY DIFFERENT LOCAL & INTERNATIONAL AREAS (SPREAD THE WORD)!
For added success, you can also mail this letter as well, in addition to posting in newsgroups. Order 200 (or more) names from a mailing list company. Two that have been most effective for these names are:

S.E. Mailing List Advon Distributors
P.O. Box 15061 P.O. Box B-11
Ft. Lauderdale, FL 33318S Helly, ID 83274
(954) 742-9519 (800) 992-3866

4. Keep a copy of this letter so you can use it a second time. Also keep EACH AND EVERY NAME AND ADDRESS SENT TO YOU as instructed in #1. Then, send out more copies in about 6 months, but mail it to the addresses you receive (your new mailing list) with each dollar! It will work again, only much better!

Here are the addresses that you must send a dollar to with your slip of paper requesting placement on their mailing list, as instructed above:

1. Ron van Hoof
14 Moshier St.
Greenwich, CT 06831
USA

2. Richard Blanchette
Pob 455
Palisade, Colorado
81520
USA

3. Caroline Mowinckel
Molnar Utca 21
2 Em Nr-10
H-1056 Budapest
Hungary

4. Odd Hilsen
Avda Espana 93
Sitio de Calahonda
Mijas Costa - Malaga
Spain

5. Peter Kjoge
Camino de la Condesa 9, 5-A
E-29640 Fuengirola
Spain

***THIS PLAN WILL NOT WORK UNLESS YOU SEND $1.00 TO EACH OF THE ABOVE PERSONS AS DIRECTED.

How do the numbers work for potential income earnings?
Assume for the sake of example that you get a 7.5% return rate. This is a very conservative, my first attempt was about 9.5%, and my second was over 11%.

1. You send out 250 letters, and 18 people (250 x 7.5% = 18) will send $1 each. $18.00

2. Those 18 send out 250 letters each, and 337 people (18 x 250 = 4,500x 7.5% = 337), send you $1 each. $337.00

3. Those 337 send out 250 letters each (337 x 250 = 84,250 x 7.5% = 6,318), and 6,318 people send you $1 each. $6,318

4. Those 6,318 send out 250 letters each (6,318 x 250 = 1,579,500 x 7.5% = 118,462), and 118,462 people send you $1 each. $118,462.00

5. Those 118,462 send out 250 letters each (118,462 x 250 = 29,615,500 x 7.5% = 2,221,162), and 2,221,162 people send you $1 each. $2,221,162.00

ADD 1-5 AND TOTAL AT $2,346,297.50

ALL THIS IS AT A 7.5% RETURN ON YOUR LETTERS. THAT'S 18 REPLIES ON YOUR ORIGINAL 250 POSTINGS.

Some valuable, general suggestions:

1. DO NOT TRY AND CHEAT THIS PROCESS. IF YOU DO, YOU WILL NOT ACHIEVE THE DISIRED RESULTS.

2. The Internet is a very effective medium for exposing this vehicle. However, pay attention to newsgroups, and avoid posting this letter in the newsgroups where there are a lot of upset epeople complaining about "spamming." In other words, we are asking that you use common sense, and have courtesy to others on the Internet. This may be opposite of what many other similar postings may be saying. Keep in mind that there are plenty of people out there who believe and want this as much as you do.

3. Keep a positive frame of mind while engaging in this process, and you will receive the amount of money you desire.

4. In order to achieve maximum results DO NOT CHANGE THE CONTENTS OF THIS LETTER. However, you may edit applicable portions relating to Internet when sending this letter via regular mail.

5. When the money begins to arrive, it is a good gesture to give 10% or more to your church or favorite charity with a joyful spirit.
The Internet has proved to be a very quick and effective means to reach millions of people with your message. This message exemplifies a UNIVERSAL LAW OF ABUNDANCE that there is plenty to go around for everyone. You will not be hurting anyone and will be creating the opportunity for those who read your message to benefit--just as you will--from the abundance that exists in this universe.

CB RADIO EPITAPH 1997
by Amor Powers

A once brilliant light of technology shone,
Then trashed and forgotten for cellular phone.
Midlife crisis between twenty-three and forty;
Hunted and wounded for a bit of bounty.

The faithful held vigil but the masses didn't care:
They just wanted old CB off the air.
Cable to view and surround sound to hear,
But the picture was scrambled when CB was near.

Was it consumer equipment at fault?
The town didn't care they just called it a halt.
Bashing through doors with battering rams,
Local authorities pounced along with some hams.

The nurses tried and the doctors operated,
Poor old CB wasn't even sedated.
A feeble voice and a heart condition;
Good old CB had seen the last mission.

Here lies CB Radio,
Down the road.
Once a beam...
Now a dummy load.

Source record: 116897

Yes, this is the hollow state one...the B&W Model 600 Dip Meter.

Not mint, but nice shape and the front panel's clean. Includes all
normally supplied coils (coil set 600-A) in their original box, together
with the original manual...the serial number of the manual even matches
the unit!

Unit covers 1.75 to 260 MC and uses a 955 acorn type tube and a 0-500
microamperes. Has diode position and phone jack for use as a mod
monitor.
Works fine.

$50 plus shipping for about 4 pounds if needed from Nashua, NH 03060.

73 es tnx,
-Pete

Hello Geoff:

The R-390A will operate on 115 and 230VAC. There is a switch on the
power transformer module that determines the input voltage. As far
as the line frequency goes, I looked in the manuals quickly and did
not see any reference to this. There are three manuals for the R-390A:
Operators, Organizational Maintenance and Depot and a quick look on
this matter turned nothing. I am somewhat surprised because usually
military manuals outline specs and parameters very thoroughly. Perhaps
it is in there but I wasn't able to find it quickly.

Perhaps someone else knows if 50 Hz will make any difference. I tend to
think it won't.

Interesting spin, but overlooks the actions of a few (?)
that ruined it for the rest.

If the users had stayed with 5 watts and roof mounted
antennas (no towers and beams), none of the 'lament'
would be necessary.

Perhaps the same will be said about Amateur Radio in
the future when the last of the HF operators die off
secure in the knowledge they kept all the newcomers
off "thier" frequencies.

Hello!

I have my unit working at 50Hz without problems. By the way, in the
front panel tag you can read 115/230V 50/60Hz, so it is sure it works
fine.

Best regards.

JOSE

I am seeking a "COLLECTOR QUALITY" Johnson Viking Valiant. The unit I wish to purchase MUST be MINT, ORIGINAL (except for minor indentifiable mods), FULLY OPERATIONAL (plug & play) and SUPER CLEAN cosmetically (a 9.5+). You should also have original manual. I am willing to pay a TOP $ competitive price for this unit and of course will pay all insurance and shipping costs. Please contact me at K1DPM@aol.com and tell me about your Valiant or call 207-767-5143 and leave a message. I will return your call the same day. I am NOT a dealer..for personal amateur use. Thank you!

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec, Gates etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

Tell him to put them up in the attic and save for about 50 years.

So far as I know Teletype 33s are still in the category of things you
have to pay people to take to the dump for them. However just recently
an old stock ticker was offered for sale at auction with a minimum bid
of $4000. (And didn't sell)

FS: NEW 19" rack cabinets in Atlanta **$100**

I have 4 NEW 19" Rack Cabinets that I would like to sell.

They are: 80" High
23" Width
37" Depth

These NEW cabinets are real nice and come with the following features:

-Very heavy duty design
-Gray in color
-Rear door
-Taped screw holes
-Front and rear panel mounts
-Casters for easy moving
-Removable side panels
-Vented top
-Opening in bottom for cables

Asking $100 per cabinet. Buyer must pick up in Atlanta or I can deliver
to anyone within 50 miles of Atlanta.

Email me for more information

Posting for a friend. Please do not reply.

Dr. Bob Stephens of northern California has a garage full of amateur receivers dating from the mid 1930s through the 1950s for sale as a lot. As I recall there are something on the order of 75 sets nearly all of which are complete and in good to very good cosmetic condition. These are not parts sets or collection culls. Dr. Stephens is not expecting to retire on the proceeds from the lot but is interested in selling the lot for a reasonable and fair price. If interested and capable of trans- porting and accomodating such a lot of receivers, Dr. Stephens can be reached by telephone at his office. Ph: (916) 926-2833

I know nothing more about the receiver lot so please do not reply unless you want to correspond about chrome plated receivers of the 1930s!

Norman.

I stumbled on a sealed box with three old RCA comm receiver knobs, as seen on the ACR-111 and probably other RCA sets. These are about 2 inch diameter,
cast out of pot metal,
with finger grips, black crinkle finish, and a little aluminum spinner shaft with bushing.
They seem to be new and untouched by human hands since about 1937 or so.

I certainly don't forsee a need for them. If you do, they're yours for $5 for 3, plus postage.

1617. FS: Copy Collins Manuals

Greetings All

Several weeks ago I listed and sold immediately the Army maintenance manuals for the Collins Radio KWM-2/2A and the 30L-1. I was surprised by the response and to help those that weren't first to respond I had a small number of copies made at a local print shop. I have a couple sets of these copies left.

For Sale: A well done copy of:

TM 11-5820-554-43-1 DIRECT SUPPORT AND GENERAL SUPPORT
MAINTENANCE MANUAL FOR - AMPLIFIER RADIO
FREQUENCY AM-3979/FRC-93
(COLLINS MODEL 30L-1) August 1976

TM 11-5820-554-34-3 DIRECT SUPPORT AND GENERAL SUPPORT
MAINTENANCE MANUAL FOR -
RECEIVER-TRANSMITTER RADIO RT-718/FRC-93
(COLLINS MODEL KWM-2/2A), May 1976
with change number 1, January 1989

These manuals are not the quality of the standard Army TM, but seem to be an adoption of material supplied by Collins and look to reflect the commercial manuals (which are also a little terse) but with several additions. Of interest to me are several pages in the KWM2 book detailing Schematic changes and equipment differences with a note saying serial numbers can't be used to identify units because "the manufacture has scrambled serial numbers on his amateur products". The electrical drawing for the KWM-2/2A is a set of 5 11 by 17 inch sheets and the 30L-1 a single 11 by 24 inch sheet.

Price for the KWM-2/2A manual is $12.50 plus postage
Price for the 30L-1 manual is $7.50 plus postage
I have been using the $3 flat rate priority envelope

73's Bob W7VZX

They have always been that way. It seems that cater to the rich unsuspecting buyer both domestic and foreign. I use to go to a lot of hamfests but no more because of people who try to make a living at it. It was first designed so you could sell or trade some of your surplus items and it was great, nobody asked a lot for their stuff. I always wonder about people who don't put prices on their stuff. If you can't be upfront when selling items, then I feel you have something to hide. Every time I went by a table that had no price tags, I told the guy it must be free because I don't see any price. The stock answer for them is "I don't know, make me an offer" and your reply is $100 then he says " I got to get $400 for it." well if he's got to get $400 for it the he knows what the price is. SO PUT THE FREEKIN PRICE ON IT!

I've watched this discussion and thought I'd stay out of it, but can't resist...

I, like Ed Wright, have bought a few things from them. I have never met Bob or his people, even at a hamfest, but can say that he has been courteous and helpful to me. His prices are quite high to be sure, but I always felt I had the choice of not buying from him. In fact, I have bought by far the majority of my ham needs elsewhere.

I do not understand the snivelling I'm reading here. The man chooses to make his living at this; what is wrong with that? Who among you likes to give your time away? If he wants $3 each for rubber feet and you know where to get them for $1, who is to blame if you pay the $3? On the other hand, if you don't know where to get them at all, and he has taken the time to find them and invested his money and shelf space in buying a quantity of them, then wants $3 each so that he can turn a profit on the venture, why do you criticize him? If he told you that they were $1 each and then charged you $3, I'd understand your chagrin. But if you have the choice of not buying them, what is your complaint?

I've heard several people comment that this is supposed to be a hobby. Yeah, it is, for us hobbyists. But Bob has made it his livelihood, it's not a hobby to him, it's how he feeds his family. Do you think making trancievers is a hobby to all the fine people who work for TenTec and that they should sell them for what it costs to build them? Would you ask their families to go hungry to make you a good deal on your hobby rig?

To me, it's pretty simple. If you think it's too high, don't buy it.

Oh, and by the way, I am a lot more symphathetic to the original complaint that started this thread...the $5 for the catalog that still hasn't shipped. I don't, however, think that there was any intent to deceive, just delays that are probably beyond his control. Granted, they should keep you informed, but I'd imagine that it would be an expensive mailing...kind of a catch 22.

For my money, I refuse to pay for anybody's catalog...not just this one. I have bought several things from SSN, and may again.They have my address in their database, no doubt. If they were smart, they'd send me a catalog unsolicited like so many other vendors do, since they know I'm likely to buy from it, as I won't be sending any $5 for it...ever. They say that they'll refund the $5 on the first order, which might be good policy on someone who asks for a catalog but has never bought from you...in my case I would think that they could take the risk, but the choice is theirs...I'm not in any way demanding that they do anything.

Glad I got that off my chest, aren't you?

73's to all,

Travis

From: Peter Ferrand <petef@sprynet.com>
Message-ID: <34087716.C4831A00@sprynet.com>
Source record: 116733

This is the E.F. Johnson tube-type T-R switch, 250-39. Works great, and comes with a copy of the instructions and schematic.

There's some surface pitting of the nickel plated cabinet, which may be removable, I don't know but I won't risk it. Also Dymo labels for the connectors, which I leave you to remove as well. Very clean inside, and the 6BL7 even has the Johnson label.

This is my favorite T-R switch design, because it can handle today's legal limit in my experience, and doesn't overload from nearby broadcasters.

For sale at $50 plus shipping if needed from Nashua NH, 03060. I'll be at Gaithersburg next weekend.

>The R390A uses mechanical filters, in the I.F,
>the R390 uses tuned circuits. Other than that,
>they are the same.

>Chuck (W3FJJ)

And the R-390 has an extra RF stage and squelch and a "medium" AF selectivity position and sounds a lot better on AM than the R-390A and was a more expensive design which was replaced with the cheaper R-390A...

I agree on that. The same goes for here on the net. It drives me nuts
when someone can't put the price on the gear that they want to sell.
Those postings that have no price get ignored by me. I don't want it if
they want to hide the price from everyone.

Want mint PS-7 power supply, junker L4PS with good transformer, junker L7PS with good transformer, and perhaps spare parts for 7 line depending on cost.

For sale:
Upgrade/replacement parts for L4PS and L7PS. Higher capacity caps, higher rating diodes, new equalizing resistors, new ALC resistor (30 watt, not 7 watt that blows the unavailable ALC pot on the L4B), plus ball bearing muffin fan. All new components, shipped priority mail conus $115. The caps alone, 200 mfd not 250 mfd like I have, run over $160 at 1994 prices, if you can find them.

Also can provide copies of service manual for TR-7, general coverage transmit/recieve mod, VLF mod, and copies of owner's manuals for TR-7, L-7, MN-2700, keyer, patch, speech processor, etc. $21 priority mail conus.

From: w1ksz@juno.com
Message-ID: <5uctov$1j3@news-central.tiac.net>
Source record: 116754

Due to being gifted with a nice old Hammarlund SP-600-JX-17, I no longer want the R-392 RCVRs I have:

1) Works OK up to 4 Mc, past that most likely problem in XTAL Oscillator section. Non-standard meter, knobs and part of case painted Kelly Green. Sold as-is, $75

2) Working Unit, bought from 3-land surplus dealer, touted as "Depot Overhauled" (something like that), Yeah !! Unit came without meter (thats where #1 meter went) and knobs. More like Depot De-Militarized. Found look-alike knobs so all is well. Paid $200 for this unit, will accept best offer over $150.

SHIPPING IS EXTRA. Will get it packed by local UPS shipper. Advise Zip Code so I can get estimate of shipping costs.

Have numerous tech manuals on R-392 and T-195 as well as NIB/NOS spare tubes, subject to negotiation.

Anyone interested ?? 73, Dick, W1KSZ.

He doesn't have 7 coils, he has '30s coils. He is planning to get an
HRO-7
receiver.

BTW, anyone have the Broadcast coils for an HRO-7R they are willing to
part
with? (My receiver is painted wrinkle-black).

>
> 1) No handles to pull on to get the coils out

The levers on an HRO-7 collide with the handles on the older design
coils.
The older coils will not fit, and since the handles are rivited to a
sub-chassis,
major mechanical destruction will be necessary to force the older coils
into
an HRO-7.

Electrically, though, they probably will work, provided they are aligned
for
the receiver. It would be much better to find HRO-7 assemblies,
however.

1652. Need: Heath IO-10 schem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-08-31 00:00:00 UTC
From: Larry Tucker <sts@ac.net>
Message-ID: <340A2646.7659@ac.net>
Source record: 116759

Hello,

I have a Heath IO-10 monitor scope. I need a schematic diagram or copy of same. Copy of the manual would be good but I think I can do with just the schematic. Seems that the CRT is good but the socket has come off the CRT due to age and cracking of the glue that holds it on. If you have a manual and can copy the schematic I will gladly pay your costs.

Thanks much.

From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5ud63l$d58@mtinsc05.worldnet.att.net>
Source record: 116761

I'm going to Rochester - AWA Meet Sept 3-6, Flea starts Wed at 6:00
a.m.
Here's some of what I'm bringing to sell.... All from a big estate!

Vintage Radios, Parts and tubes.

Boatanchor stuff ......

Tubes: A real nice selection of radio tubes, tested, cleaned and
boxed;
Ceramic: Tube sockets 4-8-9 pin; standoffs - large & small, antenna,
Switches, etc.;
Variables: from small to large transmitting types;
Misc: small parts of every type;
Antenna Tuners: Johnson 275W (2), MFJ-3kw, Home-brew (QST mag.),
plus a 2KW - looks like Collins S-line, but isn't;
Knight 60 Transmitter;
WW-2 Aircraft receiver (ARR-15?);
ART-13 Aircraft transmitter;
Microphones (20): D-104, RCA, American, etc.;
Books (200+): 1920 to 1970, hardbound, ARRL, TV, etc;
Magazines;
Heathkit catalogs (10+);
Radio related papers;
Misc. Radio Parts in boxes and on the groun;, so bring your knee pads
so you can do some serious routing!

Audio stuff......

Two McIntosh MC-60 type A-121 Chrome & in near perfect physical
condition
Two McIntosh MC-2105 Solid State amps, like new in Rack panel
(will come out of panel ok, if you want)
one Orban dual reverb model 111B /have box
one Orban Parametric EQ/Notch filter model 642B /have box
one Orban Gated Suppressor/Limiter model 424A /have box
one SAE Solid State Pre Amp model 2100L /have box
one SAE Time Delay Ambiencd System model 4011
one SAE Solid State Stereo Parametric EQ model 2800
one SAE Impulse Noise Reduction System model 5000
two Maxson line amps, made for the FAA
also one SONY Quad decoder
and one Electrovoice FM tuner

----------parts--------------

Audio transformers, Tubes, Microphones (some RCA), books,
magazines, paper, test equipment, some ham gear, etc.

I should have an "Estate Sale" (home made) sign somewhere,
about 4 tables and a bunch of boxes all over the blacktop.
My trailer is a 14' Box trailer, silver and black. And
I'm suppose to be parked on an end location (turnpike side).
Al Klase, Ludwell Sibly and I should be at four adjoining spots.

See map below.

I once had one of those printers that printed onto gummed paper tape; the
way Western Union used to make telegrams. It used baudot at 50 baud.

I would love to have one of those again, if I could find one in good
condition,
working, with a few rolls of tape.

1658. Subject: Vintage-Radio Mailing List

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-01 00:00:00 UTC
From: "Short, B.K." <shortckt@primenet.com>
Message-ID: <340A7BC8.4436@primenet.com>

Subject: Vintage-Radio Mailing List

Thank you for your interest in the Vintage-Radio Mailing List.

I am sure that this list will prove beneficial to anyone who is
interested in the collection, restoration, and operation of vintage
radio equipment. While this list will deal mainly with American-made
amateur radio receivers and transmitters, other makes are welcome so
long as they fit the category of "vintage". To qualify for vintage
status a set must be 25 years old and preferably contain some vacuum
tubes. This category can include military, home broadcast sets,
commercial
equipment and homebrew equipment. Any homebrew equipment using vacuum
tubes
and operating CW or AM will be considered "vintage" equipment no matter
what the age.

Accessories such as keys, antenna tuners, wattmeters, test equipment,
etc.
is also considered a part of the Vintage hobby and will be welcome if it
is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts.
With your help we can make this a great list.

If I can answer any questions that you may have please contact me at
wa4kcy@qsl.net.

To join the mailing list, send email as follows:

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe vintage-radio

To be removed from the mailing list, send email as follows:

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe vintage-radio

To post to the mailing list:

TO: vintage-radio@qth.net

A special "thank you" to Al Waller, K3TJK, for hosting the QTH Net
Vintage Radio List and providing it free of charge to all who want
to participate.

73, Andy Howard, WA4KCY

Hi Guys;
I've had this 312A-1 speaker for a while now and I now have the chance to maybe resurrect this spkr.
The cabinet and paint is almost perfect but someone in thier ultimate wisdom decided to remove the grill and Lumilite lamp and its chrome hood.
I'd like to use it with my A-4 set-up but where to find the missing parts?
Anybody have a clue on where to start?
The speaker IS NOT FOR SALE, Hi!
Thanks in advance.....RICH WA2RQY RLUCCH2098@aol.com

1664. Re: R390 vs R390A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-01 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19970901194201.PAA16907@ladder01.news.aol.com>
Source record: 116771

The earlier and better R-390 had two RF amplifiers (with three tuned circuits to reduce intermod), followed by 6 IF stages. There was so much selectivity available from these cascaded IF transformers that the designers had to put in resistors in the IF cans ("swamping resistors" someone called them) to reduce the selectivity so audio could be pulled out. The 390 also has squelch.
Because the mechanical filters respond poorly to adjacent channel splatter, I find both my 390s to be more listenable than both my 390As. The mech filters sound as if they're responding with " pinging" to the splatter.
BTW some 390As (by Electronic Assistance corp for the Navy) did not use mechanical filters at all, but were shipped with CERAMIC filters. So the generalization that the 390As have mech filters is not necessarily true.
Some very late 390As may have SSB detection built-in. A SWL in Italy has such a unit, and the mode switch has extra positions for sideband.

A variant of the 390/390A is the R-725 which uses a 390A chassis and RF deck, but with a model 500 IF deck...with NO mechanical filters. This unit was used as part of direction finding setup (NSA?) and the 390A IF strips were of irregular time/phase delay, it is said.

Matt

The ASR33 is an ASCII device with 8 bit punch/reader and 4 row
keyboard. It was used for TWX and minicomputers.

If you want the old Telex, there is a 50 baud baudot three row
keyboard version, but it's not ASR33.

The Cadillac was the model 28 - much quieter, heavy duty unit.
I used one as printer on a micro for a few years.

I have a set of the Eimac Amateur Service Newsletters, written by William I. Orr., W6SAI. These are in very good condition and cover the letters from AS-1 to AS-50. The newsletters have some great stuff, including pictures for building and discussing amplifiers, using such tubes as the 3-400Z, 4-1000A, 3-500Z, and many others. Some great amplifier circuits for HF and VHF. They include the index, and moonbounce information..

First one asking for these at 22.00 dollars, and I ship, will get them.

There was a guy selling these at the Bletchley Radio Rally in the U.K.
for only FIFTY PENCE each !!!!!! BRAND NEW !!!!!!!!

Are they really that scarce ??

1688. FS: Heathkit SB-303 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-01 00:00:00 UTC
From: Jon Schmidt <schmidtj@ix.netcom.com>
Message-ID: <340B7DFF.ACE@ix.netcom.com>
Source record: 116795

I have a Heathkit SB-303 receiver for sale. This unit is in very nice condition with a repainted cabinet. It is very clean inside and out and work very well except the crystal calibrator which doesn't work quite right. It has all of the optional filters installed. I've got too much unused gear in the shack and need to make some room. Asking $175.00 obo.
Please contact me at: schmidtj@ix.netcom.com or 714-492-5262

Thanks and 73's!

Message-ID: <01bcb733$159913e0$0fd7e4ce@fulton-pc>
Source record: 116796

I would like to purchase service/operation manuals, particularly service for a Hewlett-Packard mod. # 5245L frequency counter. It's an old one with the "nixie" tubes, I think they were called. Also an EICO mod. # 950B resistance/capacitance tester. It's the one with the tuning eye indicator. Any help would really be appreciated.
Thanks
Garrett Fulton

1692. anyone know value of D-104 plated in Gold ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-02 00:00:00 UTC
From: "Tony \"scar face\" Montana" <yea@right.com>
Message-ID: <340BC967.64D@right.com>
Source record: 116799

Hi,
As part of a trade, I picked up an Astatic D104 crystal microphone that's plated in what appears to be gold. It has an eagle on the back of the D-104 mic head, and a serial number on the base of the mic.

I would rate the condition as fair to good -- only blemish is a few small scratches where the grip-to-talk bar attaches to the side of the cylindrical mic stand.

Any idea as to the value? Works fine on my S-Line.

thanks,
Joe

Joe,

I'd place it at $75 to $100.They are not that rare and the gold plating
on them is very very thin. I've seen many of these that were starting
to rust under the gold. So much for the gold protection, hi.

From: Jim <jstrohm@taxes.net>
Message-ID: <340BEFBA.4E8A@taxes.net>
Source record: 116805

For those of you who would like to take a look at
Bob Grinnell's litany of excuses for why the SSoNE catalog
was so late, their web page is at www.surplussales.com.

I was mildly amused to find THIS item listing:

5" x 7" Replacement Speaker, 4 ohm

(COL)SPKR5-7 Modern version currently
manufactured speaker fits any S-Lines speaker
cabinet. Original impedance of 4 ohms.

The price? $25. Twenty-five bucks. Of course, if you
already paid for the catalog you get five bucks back,
plus a 10% discount coupon.

And this -- a Heath SB-200 "Museum Piece" amp for $550.
And a broken MT-1 Cheyenne for $100.

And this -- an Icom IC22S for $125.

If you have any questions or concerns about
Surplus Sales of Nebraska, you might forward them to

grinnell@surplussales.com

1701. HELP! Need resto parts for Halli S-38B

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-02 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5uhlll$p1s@sf18.dseg.ti.com>
Source record: 116808
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

PLEASE HELP! I need some restoration parts for an old Hallicrafters S-38B receiver that I dragged home from the last hamfest. Here's what I need:

- Bandswitch assembly (this is the MOST important part I need)
- All four knobs (two large, two small)
- All three slide switches
- Original line cord with "ears" intact
- MANUAL / SCHEMATIC / SERVICE INFO

How about a complete "parts radio" (locally if possible)?
Thanks for the read!

73 from Dean K5DH "deep in the heart of Texas"

1702. Need HRO E,F coils.

I don't think that you are at risk to spend much money. Drake made the original reciter to match the R4. They may even have made an A version. To the best of my knowledge -- and I have pretty extensive sales cats and literature of the period -- Drake did not make a B model and, especially, a C model.

73,

David, WA7ZYQ

1706. Any GPR-90 Receiver Users out there?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-02 00:00:00 UTC
From: remler@ll.mit.edu
Message-ID: <remler-0209971038500001@macbayliss.atc.ll.mit.edu>
Source record: 116813

Hi folks. I'm going to be the recipient of a Technical Materiel Corporation GPR-90 shortwave receiver (circa 1955) in the next few weeks -- all 52 pounds of it. I have the manual for the set, but wonder if anyone has any experience with this receiver. Is it stable? Sensitive? Easy to tune (this version has a crystal calibrator). Selective? Does the phasing control have a deep notch? Audio sound good? With this radio's strange wideband grounded-grid front end, is is it any more prone to overload than a high-end set of similar vintage? Has Electric Radio magazine published anything on this radio? Lots of questions -- any comments would be appreciated! It sure looks like a classy version of the Hammarlund "two-dialers" (HQ- and SP-series)...

Thanks
Rick WA6NCX
remler@LL.mit.edu

Well, Drake did make the T-4B and the T-4C. I have both units in my Drake collection. They were usually used together with a receiver in one cabinet.

The combo-units were:
TR-44 = R-4 and T-4 in the same cabinet
TR-44B = R-4B and T-4B in the same cabinet
TR-44C = R-4C and T-4C in the same cabinet

I have all the above in my collection.

The swedish foreign department had over 70 units of the TR-44B and the TR-44C in use. The swedish army used them too.

There were also a combo-version of the R-4245 receiver and the TR-4310 transceiver, but I don't think this had any model name. I have these units too, but not the combo of them. But it would be easy to set up a combo-unit as they are made for 19" rack mounting. So a rack cabinet of the right size would do, and this is also how the combo of them are presented in Drake's brochure.

73 de LA6OP
Sindre in Norway
Happy owner of over 200 DIFFERENT Drake units

I'm still looking for the below units for my collection:

* 4-LF LOW FREQUENCY CONVERTER
* AN-5 ANTENNA KIT
* DMM 2350 DIGITAL MULTIMETER
* IN-4 DC TO DC INVERTER (NOT THE IN-4B)
* LOGBOOKS LOGBOOKS, (USED ARE OK)
* LN-5 "INDUCTUBE" AC POWER LINE FILTER
* MMK-33 MOBILE MOUNTING KIT FOR TR-33C
* MODEL 587 AUDIO BAND PASS FILTER

* MR-3 MARINE RECEIVER
* MRT-55 MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MRT-55C MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MSR-1 MARINE RECEIVER, 19" wide
* R-8000 RECEIVER (19" RACK VERSION OF THE R-8)
* SPEAKER MATCHING SPEAKER FOR THE 1-A RECEIVER
* TESTBOX TEST UNIT WITH IF/RF FREQ. OSCILL. AND FUSE BOX FOR THE
4-LINE
* THETA 550 COMMUNICATION TERMINAL (RECEIVE ONLY)
* THETA 9000 COMMUNICATION TERMINAL
* TR-22M MARINE VHF-TRANSCEIVER (SIMILAR TR-22)
* TV-72-50HP HIGH PASS FILTER
* TV-300-FMI FILTER
* TV-300-FMT BAND REJECTION FILTER 88-108MHz
* TV-300-10HW HALF-WAVE HARMONIC FILTER
* TV-300-15HW HALF-WAVE HARMONIC FILTER
* TV-300-50HP HIGH PASS FILTER
* UHF-300-HP HIGH PASS FILTER

* ALL KIND OF DRAKE BROCHURES, MODIFICATION INFO ETC.

Any info on where to locate them will be most welcome. Thanks!!!

Hi Greg:

I think the first two might be capacitors. The values being 102X10^-6. The second unit having a 1KV rating. The manufacturer is likely ERIE (not frie).

MR usually indicates Motorola Rectifier. "M" is the Motorola symbol. The 7426 and 7412 are date codes interpreted as 26th week in 1974 and 12th week in 1974.

IR was International Rectifier. The X5M4 is likely a proprietary designation.

I hope I'm not a source of too much confusion for you, Greg.

73,

Gary, K9HDU

75S-3B serial # 15561, very clean, works great, single SSB filter. I now have a 3C to replace it with so this one is on to another who will appreciate it. Asking $500 + shipping.

Also, I have two Collins product catalogs, N0. 32, from 1964 in perfect condition, one with a February 65' price list. What are they worth to you?

email me at: msell@fast-trak.com

Thanks and 73, Michael Sell N0WEI

I need to seel a 2M mobile unit I have purchased several months ago. I am
unable to
pursu my Tech License at this point in my life and need to sell this unit.
It is brand new
still in the box. It was tested only once to be sure the unit is operional.
I am selling this
for $150.00. I will pay the shipping charges. I will accept a Money Order
or Cashiers Check
and will send to you COD.

Unit Model: HTX 242 Advance 2M Mobile (Radio Shack)

Sincerely,

Gerhardt

:::::::::: NOS MIL-SPEC PJ-068 MIC PLUGS ::::::::::

Original PJ-068 microphone plugs manufactured by Kings Electronics.

These are NOS units made in accordance with MIL-P-642A and were supplied
as original equipment to the US military and Collins Radio. Also fit
Drake and others that specify a 0.206" 3-conductor phone-type mic plug.

Black plastic barrel inscribed with the following lettering:

KINGS
PJ-068

These plugs retail for about $14 + shipping (if you can find them!).

PRICE: $7.00 each (3 for $18.50). -- I pay shipping --

1721. for sale: viking II and a swan amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-03 00:00:00 UTC
From: dhrnsn@ptd.net
Message-ID: <5uk0bhofc1@news1.ptd.net>
Source record: 116828

Last weekend, while dining at a restaurant in Rehobeth Beach, DE - I was approched by another amateur who noticed my "Collins" tee-shirt. After talking a short while and discussing our amateur interests, he let me know he had the following equipment he wants to sell. I told him about this newsgroup and volunteered to list his equipment.

- Viking II am transmitter

- Swan amplifier

I have no idea about prices or condition, please contact him directly - I have no futher information.

1722. FS: Heath DX20 VF-1 HX20 HP23 HP10 HO10

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-03 00:00:00 UTC
From: Paul W0MQE <pdblack@ibm.net>
Message-ID: <340DA0E3.665@ibm.net>
Source record: 116829

For Sale by original owner/builder:

DX20 - 50 watt cw transmitter 80-10 meter bands. Needs
power rectifier tube (5U4 or substitution).
Keying modified to grid blocking to 0 volts (A little
backwave is noticable) T/R slide switch replaced by
a rotary one.
VF-1 VFO Used with DX20
HX20 - 90 watt SSB transmitter 80-10 meter bands.
HP23 - Power Supply (AC to HX20)
HP10 - Power Supply (12VDC to HX20)
HO10 - Monitor scope (Hi voltage is out)

I have all the manuals except the DX20 manual is misplaced. It may
show up.

The cases are in very good condition. No dents and good paint.

Also have Hammerlund HQ129X in not as good condition because it has
been in the out building the past few years. It had some high
voltage ripple when I last used it. The heath equipment
has been kept in the house.

If you can meet me in the Northern Oklahoma / Southern Kansas Area,
make an offer.

This is a request for help. Does anyone know the whereabouts of Travis Martin of Lubbock, TX (N5AY)? I have had a receiver deal (HQ-110) pending with him for some time and cannot reach him via e-mail. I've sent the money but have not received the equipment.

Anyone having dealings with N5AY might respond to assure me (hopefully) that the man is honest and I'm not just out here holding the "bag"! Opinions one way or the other would be appreciated before I pursue this through "other" channels.

73,

Ron Thomas N4RT

Erie also made semiconductors back in the 60's-70's, but I couldn't
find this one on their pages in some old catalogs of that vintage.
(So did a lot of companies that don't seem to exist any more like
Hoffman, and Sakes-Tarzian).

Nostalgia buffs:
This is one of the old plug-in BC 375 tuning units that you plugged in
a differemt one for each freq range.

We used to buy these for about $1.00 each back in the 1960-65 era.

You could take the train to London and then the underground to
Tottenham Court Rd., where within a short walk, you came to shops
like Proops Ltd and Z & I Aero Services. They would stack these things
up on the floor and even out on the footpath in the front, out the
back EVERYWHERE, because they had SO many of them! They were great
for young lads building their own transmitters and aerial tuning units
etc. The parts were all silver plated including the wires, and they
put blue inspection paint on every joint. Great quality parts,
ESPECIALLY if it has a bandswitch! Those things have been extracted
for use in MANY a ham's hombrew amplifier.

Ah yes, those were the days!!

11:45 EST, 9/3/97
I would first like to apologize for this message being cross posted to different newsgroups. I am trying to locate family members who are transporting sailboat from Miami, FL, USA to Tampa, FL, USA. This is a new purchase, unfortunatly not many details. Boat taken delivery of on 9/1/97in Miami, unfortunatly do not have name of vessel (we belive it is the "Montana"?), 47 foot sailboat, do not know what communication equipment is aboard (HAM, SSB, VHF, CB), all who can assist in broadcasting for response wouldl be greatly appreciated. The family aboard is the Hoffmans, father Bob, mother Kathy, son Brian (B.J.), beleived to be in Florida Keys approximately now. If contact made, please inform them that Don Black passed away, services to be held Saturday 9/6/97am, St. Peters, Medford, NJ. Please contact Wendy Black-Fenske or any family member for further details. Thank you in advance for any and all assistance, blessings to all.

Sincerely,
P.J. Thompson III

This is a litle off the wall, but I just purchased an ncx-5 xcvr, and
the markings for most of the dials have been rubed off. I am looking
for identification of these knobs, and how their scales were marked.
Any posibility you can help me out ?

Thankd Don

The 390 used for DF was used by USAFSS. I worked on a site in 54-55
that used this configuration

1745. REQ:Tube layout on Canadian Marconi MSL5E Radio Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-04 00:00:00 UTC
From: gmoser@dlcwest.com
Message-ID: <34113caa.85798320@news.dlcwest.com>
Source record: 116852

Picked up this beaut-anchor recently. All four tubes are in place and the set is operational, but the volume is extremely faint. Tubes check good, but someone's rubbed away the tube designator near one of the tubes and I'm not sure as to what it is supposed to be. Looking from the from of the set, left to right are 6J7, 6K7, 38 & 6F7. The 6J7 is the one in question.

The crystal detector isn't opertional when switched in either and it appears that someone has modified the Crystal Phones jack.

I am looking to buy an original manual, or atleast a photocopy for the set as well as the two small tuning knobs, one for the Aerial Tuning and another one for Detector Tuning. The larger calibrated dials are intact. The following is from the name plate:

Canadian MARCONI Company
Radio Receiver
Rating: 15 Kc to 1500 Kc
Type: MSL-5E/43370-E Serial: 1400
Pat'd: 1927-44 Spec: 43365-E

Thanks for your time and efforts,
73 de VE5ARC,
Garnet

1749. R-390A's For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-05 00:00:00 UTC
From: Joe Moraine <w5lx@flash.net>
Message-ID: <341015DB.53FD@flash.net>
Source record: 116665

I have the following boatanchors for sale, FOR PICKUP ONLY in the Dallas\Ft. Worth area. All the radios have top and bottom covers, original knobs, original meters, and all look great and work great.

R-390A, Collins serial number 148, order no. 14214-PH-51. Looks and works great. $325.

R-390A, Motorola serial number 2494, order no. 14-PH-56. In steel cabinet. Looks and works great. $350

R-390A, Built for Manson Labs (a subsidary of Hallicrafters Corp.) for use as a frequency standard in the production of oscillators. Serial no. 112. Faceplate says "Model 1247/GRC-129." This radio is mostly Motorola components and looks and works great. $325.

I also have an RME-45 receiver with manual that has been totally restored by K5DUT. This radio looks and works like new and is the best restoration of a circa 1948 radio that I have seen. $250.

1750. WTB: UNBUILT RADIO KITS- WILL TRADE

I have for give away a GE MASTR Progress Line base station.

It is currently up and running on 52.525. Comes with
hand mike and nice original manual.

100W out. Also, have a spare RX already tuned up on 52.525.

The unit is the size of a desk high, two drawer file cabinet. I hauled
two of these in a Volvo.

Pick up only, Lafayette, LA.

73 Tom N5OFF

p.s.

No, I won't ship it, don't ask.
No, I won't ship just the rocks, don't ask.

Seeing as it's his merchandise he can ask whatever the market will "Bear" (pun intended). I wouldn't pay that kind of money either but what are we doing here? selling and buying stuff, he can ask whatever he wants it's his. I wouldn't pay 5 grand for a baseball card or $1500 bucks for a Super Bowl ticket either...but somebody will if they want it bad enough, there's an ass for every seat. You shouldn't criticize someone because you disagree with the price they ask, at least he was honest and not mis-representing as is done here from time to time...give the guy a break, enjoy the postings.

You mean other than Radio Shack? (Sorry, just kidding.) :^)
Don't know of any general purpose electronix stores around Rockville.
The RF Connection in Gaithersburg sells antenna supplies & connectors.
Arlington Electonic Wholesalers on Lee Hwy. in Arl. is the closest
regular parts shop I've seen.

You could also try the Gaithersburg hamfest this Sunday at the
fairgrounds.

Please pass this to the reflectors you subscribe:

I have a builder friend that has contributed a lot to our repeater projects. He's a "real ham" in that as an Extra, he likes to build his own CW Amplifiers. He has noted that he needs a pair of 450TH's for his CW amplifier project. We came up with ONE new one.

If anyone has more (including a spare or two), I would be willing to pay cash money to endorse the building part of the hobby for Ken. We're loosing the "real hams" that build equipment, and I want to acknowledge his help by buying what he can't afford.

Please contact me at wa6bzs@amsat.org if you have any 450TH's that I can buy with CA$H.

Thanks

Hi Gang,

I"ll be at the Findlay (OH) hamfest Sunday, and can take the following items, if anyone is interested in seeing them. I'm not planning on setting up a table, but can arrange to show them via phone or email.

1. National NC-155 + speaker: One of the "cosmic blue" receivers, recently aligned and cleaned.Covers 80-6 meters. Cabinet is about an 8.5, front panel a 9.5. Price $115

2. Ameco TX62 and matching 6m/2m/220 VFO; AM/CW transmitter. Looks excellent (a 9.5), recently cleaned, aligned, and re-capped. $135 for both.

****

Am looking for following items:

1. Matching speaker for HRO-50T1. Can trade mint speaker for HRO-7/NC-183D, which is identical to the one I'm seeking except a slightly lighter gray

2. 2.1 kHZ filter for the 75A-4.

3. Cabinet for a Galaxy GT-550 transceiver

4. Cabainet for an R-390A.

5. Johnson VFO-122.

Nick,

Basic info on the 5R10A from the Halli book is that is was produced from 1951-1953, and costs 39.95 new. The sibling models are 5R10, 5R10A, 5R100, 5R100A. 5 tubes, four bands, .540 - 31 mc.

That is about all that is listed.

Setting up an old DX-60 station - Have calibrator but no tube - (6BE6?)
Anyone out there know?
Thanks, Dave - KQ6MI

1805. Bringing a SB230 online...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-06 00:00:00 UTC
From: ibthebigma@aol.com
Message-ID: <19970906182401.OAA17286@ladder01.news.aol.com>
Source record: 116706

I bought a nice SB230, but reviewing the builders notes, it
looked like he had some problems with parasitics above 20M. I tuned it
up into a dummy load with inconclusive results but it looked like 450W out
on 15... didn't like to be lightly loaded. Suppression consists of 2
ferrite beads pretty much half way between the plate choke and the anode.
I was thinking of adding a classic "2 watt" resistors with
adjacent small coil between the ferrite beads, along with about a 10 Ohm
WW resistor in the B+ lead before the plate choke. (I wonder if those
beads get to the Curie point and fail to suppress)
Another shortcoming of this amp is the lack of a separate grid
current meter. I was thinking of adding a connection to put an external
full time meter. (or better yet.. a grid trip circuit).
If anyone has been down this road before, I'd sure like to
know about it.
(or would I just be hacking up a classic?)
Thanks, Dave KQ6MI

G and G Electronics at 8524 Dakota Ave., Gaithersburg (301-258-7373) has alot of miscellaneous stuff--mostly used. I know he has alot of tubes, relays, test equipment, ancient QSTs, some old boat anchors and who-knows-what-else. I've never asked for resistors or capacitors, so I have no idea what he has of those.

>
> If interested call Leo ph/fax (310) 670-6969......Thanks......73

Seeing these prices I was wondering if I could make some money parting out my excellent 75A-4 bought in spring with 3 filters and spinner knob for $1,200. (Yes I know everybody thought I was crazy)

But then Leo generously lowered his prices to $300 each.

Another event which might be of some interest to the group:
Leo yesterday had two postings at rec.radio.swap looking for a 55G-1 and 399C-1. The 55G-1 is the very rare VLF preselector for the 51S-1 and the 399C-1 is a very very rare PTO for the KWM-2.
I have both and just for fun asked him what he wants to offer. I had hoped for 5 to 6 grand according to his asking prices. But he only offered $800 for both! No further comment!!!

We really should stop complaining about Surplus Sales.

Source record: 116631

Simply a Hallicrafter's broadcast/sw receiver covering 540kc to 31mc made back during 51-53. There were actually 4 models, the 5R10, 5R10A, 5R100, 5R100A. According to Chuck Dachis' book, there are no apparent differences between the 10, 100, and the subsequent A models. Difference between the 10 series and the 100 series is the color of the case. 10's have a black case and the 100's have a hammertone case. I have a 5R100A which I've recapped and restored. Looks good, plays great except for an intermittent which I think may be heat related.

Book covers all Hallicrafter's products. Wonderful book and extremely well done with beautiful pictures. Chuck has a lot of info on the history of Hallicrafters, but not really the info like you're looking for re radio names. Regardless, if you're interested in Hallicrafters equipment, would highly recommend it, in fact, would go so far to say that it is indispensible. Chuck did a fantastic job on this book. Antique Radio has it.

Stop Yakking Start Clickin..C W 4 evr wrote in article <5urrcggtc1@newsd-4.alma.webtv.net>...

Does that book cover ham transceivers? I have a SR-400 (Cyclone) but I am interested in stories of the other "storm" halli's (I.E. Tornado and Hurricane). Who's bright idea was it to name these radios after WX? Wonder if they sold many?

1840. Anybody looking for a resonably priced R392?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-07 00:00:00 UTC
From: macino <macino@ibm.net>
Message-ID: <34130DB8.75DE@ibm.net>
Source record: 116648

Hi,

I've got a R392 with a homebrew power supply that needs a new home. It's in my way, I have no time to 'play' with it. Electrically, I think it is sound. There is a bind in the mechanical bandswitching. As I said, it's going to be resonably priced. QTH is northern Indiana. So if you know the approximate weight, and the distance, you have an idea for the shipping cost. Email me direct, I generally don't monitor this newsgroup.

1844. Q: Will a gonset 201 amp. take this?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-07 00:00:00 UTC
From: John in Roseville <rtwod2@ns.net>
Message-ID: <01bcbbda$09f5ce60$1cf277cc@rtwodtwo>
Source record: 116652

I'm helping a friend fix up a gonset 201 amp.

This amp has a 2500 volt 1 amp ICAS transformer with a diode
bridge that goes into a swinging choke filter.
Because of the swinging choke the supply voltage is 1500 to
2000 volts under load.

To keep the voltage from going too high under no load the amp has
a 100 watt 50K resistor across the supply. Under no load the voltage
is about 2200 volts so that makes 96.8 watts of power in the 50K
resistor.

I was thinking about removing the choke and the 50K resistor to make
the supply voltage about 3300 to 3500 under load.
I know the caps will have to be replaced for the higher voltage.
Now it has 7 each 470mf at 450 volt caps with 30K resistors across
each cap. That makes a 67uf at 3150 volts cap.
If I had 8 each 470mf at 450 that would make 58mf at 3600 volts.

This amp uses 4 each 572b tubes that are rated at 2750 volts max.
It might just be better to leave it the way it is.
What do you think?

> "Never drive faster than your guardian angel can fly"

John,
They pay engineers a LOT more than you or I to design these things.
There are reasons why the output voltage is what it is.
You didn't say WHY you wanted more voltage but I can tell you a couple
things, for sure:
1. Up the voltage and you'll find out why they rate tubes the way they
do...if they don't melt, they'll arc over and all your mods will go in
the dumpster.
2. Remove the swinging choke and you'll be lucky to find anyone who will
want to talk to you. With the 60 or 120 cycle hum on your signal, you'll
become real unpopular, real fast.
Hope this helps (leave it be).
Radio Randy

1861. Cleaning Old Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-08 00:00:00 UTC
From: David Ditlow <ditlow@ucla.edu>
Message-ID: <3413BE8A.87513E6A@ucla.edu>

x no-archive=yes

I have just purchased a Hammarlund HQ 170, and it has quite a bit of old nicotine on the face of the panel and on the knobs. What is the strongest, yet *safest* cleaner to use on the front panel of the radio. All of the original lettering, original paint is in perfect condition... If I can just get some of this extra nicotine off. I did try a mild dish soap and warm water on a sponge, but that only got about 80% of the "smoke" off of it.

I would appreciate any helpful comments, this is my first "old" radio...

73,

Dave Ditlow

Try plain ol' toothpaste. I put a small amount on a damp rag. Rub
it gently, then rinse it off.

I would just like to thank everyone who responded with suggestions or information on trying to locate the Hoffman family aboard the sailboat Montana. It was very nice to know that there is a knowledgalble, compasionate and dedicated community of amatuer radio operaters who would take the time to help a stranger who is not part of this community. We we're not able to locate the family in time for the funeral, but contact was made on Saturday 9/6, they had picked up a VHF transmission (I do not know yet if is was a amatuer operator or the C.G. yet, I did not speak with them), and they called home and left a message as to were they were. The family was able to make arrangements to have the body held for a private ceremony after they return. Thank you again for all you you assistance in this matter, blessings to all.

Sincerely,
P.J. Thompson III

Hi Dean, that's what my elmer told me in the early 1950's. Also there's
a word-origin column called "Word For Word" that appears in some
newspapers.
A column from years ago sez, "A 'ham' radio operator is certainly a play
on
the word 'amateur'. The term was coined in the 1920s."

1875. Noisy Hammarlund HQ129

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-08 00:00:00 UTC
From: Steve Huss <steven.e.huss@tek.com>
Message-ID: <341441A7.4F15@tek.com>
Source record: 116584

I have a Hammarlund HQ-129 that I really enjoy listening to. I m new to boatanchors, in fact this is my first and only one. I got it on trade for a German transistor portable a few months ago. The sound is great and I love those big fire bottles and the huge variable tuning cap but there seems to be a little problem that has recently cropped up.

There is a scratchy noisy sound (it can come and go and vary in sound level) coming from the speaker and appears to be coming form the audio circuit. I say audio circuit because the noise remains even when the band selector is between bands and the selectivity knob is turned all the way down. It s kind of like the noise you would get from a bad volume control as you turn it back and forth. Mind you, this does not happen when I vary the Hammarlund s volume control. Maybe it s still bad? 99% of the caps have been replaced but it has the original resistors.

I have a schematic and access to a scope but thought I would seek some wisdom before probing around. Thanks for any help.

1880. HELP: HP-180D Scope Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-08 00:00:00 UTC
From: rich0261@aol.com
Message-ID: <19970908204500.QAA01603@ladder02.news.aol.com>
Source record: 116589

Hey Gang!

Okay, it isn't a BA question, however I do use it to service BA's! My HP-180D Oscilloscope's Horizontal Oscillator is on the fritz, no High Voltage. While its not my expertise (too few glowing parts), I disected the unit and checked what I could. What I'd like to know is what all this means and what else I should be looking for. The fuse providing the +29V to the HO circuit blew. The HO transistor is shorted dead across all three terminals. A neon bulb in the voltage divider chain appears to have corroded off. I get infinite resistance readings both forward and reverse across each of two 4Kv (or so) rectifiers (part #1901-0341). Thats all the damage I can locate. I see no signs of arcing or overheating in the unit. The Flyback resistances seem reasonable, 3 windings, two on the oscillator side, one on the HV side. One on the oscillator side is tapped near one end, and the HV side is tapped near one end. The only markings on the HO transistor are a Motorola logo, 939 and 4-0609, I could use a generic part number for it. Any hints or suggestions are most appreciated. I don't have a manual or schematic, I'd be interested in both.

Thanks for the read!

Richard

The Apache, Marauder, and Mohawk were all chromed. The
earlier ones were satin finished and the later ones were
polished bright. I have all three sitting here in front
of me and am waiting for my Warrior amp to get here.
They have chrome knobs too. Any none chrome knobs are
substitutes. Even the SB-10 ssb adaptor has chrome knobs.
So does my Seneca and Pawnee. Just about all the Heathkits
of that period had chrome knobs. Love those Heathkits.

> Where did the term HAM come from? When did it come to popular use?

The *real* explanation appears to be lost in the mists of time. There are a number of theories. Some more plausible than others. The one you'll likely hear the most is about "little station HAM". It goes like this. In the early days of radio, the government didn't assign call letters to amateurs. They just made up their own. Supposedly, three students at Harvard named Hyman, Almay, and Murray set up a station. They decided to use their initials as the call. Thus we have the little station HAM. When the Navy tried to grab control of all radio frequencies, these guys are supposed to have testified before Congress, and the story of little station HAM supposedly didn't leave a dry eye in the house. The press is supposed to have picked up this story of little station HAM, and amateurs have been known as hams ever since.

Unfortunately for this story, none of it checks out. A past president of the ARRL did extensive research in an attempt to confirm this story. There is nothing in the Congressional record about little station HAM. There is nothing in contemporary press records. And there is no record of a Hyman, Almay, or Murray at Harvard at the time this supposedly happened. This story first surfaced in an amateur publication in 1948, and doesn't seem likely to die. But it appears to have no factual basis.

Another story you may hear is that ham is the result of a Cockney pronounciation of (h)amateur. But that is unlikely for two reasons. First, the term was in use in America before there was substantial amateur activity in Britian. And second, voice transmission wasn't used by amateurs of the era, so how did a pronounciation get propagated by Morse?

Another story you may hear is that it comes from a landline telegrapher's insult. Many operators of the day came from a landline background, and on the landlines a common insult was that someone was "ham fisted" in his sending. It is possible that commerical operators used this slang to refer to amateurs and it caught on. Certainly, the term LID came from landline telegrapher slang. (LID was a reference to use of a tobacco can lid on the sounder to aid a poor operator in copying Morse.) This one may be true. It wouldn't be the first time that a group adopted a term originally meant as an insult to serve as a slang term for themselves.

But the one I like best goes like this. This era was filled with pulp magazines catering to the experimenter. (Everyone at the end of

the Victorian age apparently viewed himself as a closet inventor or tinkerer.) One of these magazines was called Home Amateur Mechanic, and it featured many simple radio sets a person could build. It is likely that when asked what kind of radio an operator was using, he might send back RIG HR ES HAM, meaning that it was one of the circuits shown in Home Amateur Mechanic magazine. Since telegraphers tend to abbreviate everything, due to the low throughput of Morse, this is plausible, and Home Amateur Mechanic magazine certainly did exist in the correct era. So it was those HAM radios which started the use of ham in amateur radio.

I sure was glad to see your message. As a former owner of these and many other Heath products 30-35 years ago, I thought I was losing my memory sooner than anticipated when I saw the non-chrome knobs comments. While whether they were or weren't chromed isn't a big deal, I was happy to see that these rigs are still around. I had a lot of fun with an Apache equipped with the SB-10 SSB adapter. The TX and RX were heavy. They are perfect examples of why this is the rec.radio.amateur.boatanchors list.

I agree that 409 is a good powerful cleaner, but you must be careful
about where you use it. It is usually okay on painted metal surfaces,
etc. Never use it on silkscreened, glass dials or parts that have
silkscreened information over a plastic surface. Some of these
silkscreen inks will come off using 409. Be cautious, I've learned the
hard way.

My Apache knobs are satin finish and they probably are chromed. Right
now, it's not functional but it came with the SB-10 and an Electro Voice
638 which I'm using on my Ranger.
Does anyone know if the Ranger can be readily used on SSB by using the
SB-10? I'd be interested if it can.

I'm sure that this was discussed in the RSGB's Radio Communication
magazine some years ago but I'm not about to start digging through the
pile in the attic!! From what I remember "Ham" is derived from the
acting profession, a "ham actor" basically being a poor one. My Concise
Oxford dictionary certainly agrees with this, " an inexperienced or
ineffective actor, one who rants and raves"! IIRC from the Radcom
discussion the acting term came from the fact that the early greasepaint
used as makeup was based on pig grease - hence "ham"!

I expect we'll never learn the real origin but I learned something from
this discussion, although I haven't heard the term "lid" for years I
always wondered what it came from, mni tks to tt poster!

i dont think i have the manual, but my index card gives
the following info which might help you somewhat:

Manual is an Air Force(?) manual nr. AN08-10-180

unit is 200-400KHz and 1.5MH to 18MH in 6 bands
input is 28vdc, but a supply can be made for 220vdc@ 70ma
plus filaments

see 73 mag, sept. 1976, p. 84 for circuit and update info.

see 73 mag, June 1964, p. 88 for info

Seems to me I used to have one of those things a long time ago!!

The term "Ham" is intensley disliked by many UK Amateur operators -
Where on earth did you get the idea that the term was in use before
there was *substantial* amateur activity in Britain. The UK has a
proud history of radio experimentation preceding the introduction of
the word Ham.

The Concise Oxford Dictionary has it as slang for an amateur, as in ham
actor. It also mentions the terms ham-handed and ham-fisted, for someone
who is clumsy. This is probably why "ham" isn't used much by radio
amateurs in the UK. You *never* see the word in RadCom, unlike QST.

Sure it has,

Beginning with this guy who had come over from Italy. As far as
I remember he only went to the US after Britain had become too small
for his DX-tests. This was around 1901.

For Sale:
Collins KWM-2A Transceiver, 516F-2 Power Supply,
Round Emblem and CP-1 Crystal pack.

They are in very good cond. and work very well.
on a scale of 1 to 10 they are a 9 1/2 plus. They
are all stock with no mods. No scratches on the
face, a couple small scratches on the bottom of
the case, no dents. Non smoker... I live in Ca.
Northern california by Eureka.

$950.00 plus shipping

Hi,

I an looking for and to buy a Collins KWS-1 and a 75A-4 or 75A-3.
Does anyone know the going price and what would be. Also the difference
between getting the 75A-4 or the 75A-3. I know very little about this
equiptment and would like some input on it.

Thank You,
Boyd N6DMF

Well, of course hams are the cheapest bunch of people around. I know that
I certainly am! (My first receiver cost me $2 and my first transmitter was
built entirely from parts scavenged from TV sets).

This is why the fellow is so surprised that people would pay that kind of
money. Since hams are so cheap, why would used ham gear appreciate so
much?

Good advice from Chuck but use a wooden or plastic stick to "wiggle "
those resistors. Some of them can be warm enought to burn a finger and
some, especially in the plate circuits, can have a high voltage applied.

Lets us know how your trouble shooting turns out.

When radio was being developed at the turn of the century, and the fcc
was created, commercial interests wanted all the frequencies. However
certain portions of the high frequency band were allocated to amateur
radio enthusiasts for experimentation, the feeling being that they could
never develop radios that would transmit more than a few miles.
Thus, HAM stands for High frequency AMateur.
Anyone got one better?

Source record: 116538

Greetings,

I just picked up a nice HRO-500 at a fest last weekend. I was looking for comments, tips and any usefull trivia/info. The radio works fine (manual is on order) but does have a couple of little quirks; When changing the MC bands the knob needs a couple of turns before the band comes on. I know this is not a true glow-in-the dark set but it sure does look like one!

Regards,

Bill

I just aquired a Knight Star Roamer, in excellent shape. I does have a minor problem. Band 3 seems to be dead. The broadcast band, (band 2) works great, and 1,4, and 5 seems very sensitive, and the audio sounds over modulated.

Could anyone direct me to some areas to look at, and help me aquire a schematic/owners manual for this radio? I'd really appreciate it.

Thanks in advance,

Norm

Well, I *may* have gotten it right, Mark. It is certainly a plausible
explanation. We don't know definitively, however. A lot of folks
have tried to track down and document the origin of the term, but
no one has been able to discover who used it first or why.

Hi Guys;
I have for SALE:
Heathkits QF-1 and HD-11 q-multipliers. The qf-1 is the early one that requires power from host rcvr, and is silver and grey. The HD-11 is the greenish colored one which appears to match the later heathkit rcvrs such as the Mohawk. The HD-11 could use a cabinet painting but the panel is exc. the QF-1 is in good shape. No Manual and not tested. Price is $25- each shipped or $40- for both!

Heathkit Mohawk RX-1 rcvr, no manual, playing, brushed knobs(early model), front panel is exc., nothing missing, Cabinet has some localized rusting but only in small areas, easy restoration. Price is $100- plus shipping.

National NC-173, No Manual, plays fine, was electrically restored by a local before he became a SK. The cabinet was painted by the owner and could be better.
Has two small hole on either side of front, why? Who knows?
Rcvr plays fine. Price is $75- plus shipping from Long Island.

Thanks es 73........RICH RLUCCH2098@aol.com

Try cleaning the tube sockets. You also might have an intermittant tube
in AF section. Look for cold solder joints. If you suspect the resistors,
CAREFULLY wiggle them when you hear the noise and see if you can find one
that effects it.

The term "ham" was in use long before the creation of the FCC in 1934,
or the displacement of amateurs to the short waves.

Er, ah, the pseudo-CW as written makes no gramatical sense.
Lets try RIG HR IS HAM or RIG HR DE HAM. The latter
makes the most sense, IE it says the rig is *from* Home Amateur
Mechanic magazine, but the former may have been the one used.
Apparently, no one alive today knows.

Source record: 116468

I recently acquired this set and Im having trouble with the power supply unit. When I first rec'd it, it would work for about thirty minutes, then would go dead. It did this several times over a couple weeks, until last night, it fried a resistor in the voltage regulator circuit, taking the two 6AG7's with it, also a resistor burned up under transformer T-102, boy did it stink!! Anyway, is it likely that the transformer blew as well? It didnt blow the fuse, and there's no obvious damage from the outside of the transformer, but i'm not quite sure how to test it (I'm not getting a reading on my ohmeter when I measure between primary and secondary). Another question is, what the heck kind of tube is a CK1007 (its the HV rectifier). I cant find it listed in any book I have, and AES nor Fair lists this in their catalog... I fear I roached this tube as well, but I dont know how to test it in my Eico 667 tube tester...
Can anyone pass along some wisdom on this???
Thanks!

Hi David,

I think the supply of WW2 vintage gear has pretty well dried up in the UK, at least via dealers and ham radio shops but you can still get valves ("tubes" to you!), AR88 spares and some transmitting components from Colomor Electronics, 170 Goldhawk Rd, London W12 (tel no 0181 743 0899). Most BA type of equipment shows up at rallies and ham radio car boot sales these days, or is traded thru magazines, etc. If he buys a copy of "Practical Wireless" at any of the leading news/magazine stores in London he'll be able to see if there are any events within his time frame. I suggest you cross-post to uk.radio.amateur and see if anyone has any other suggestions.

If your friend wants to _look_ at BAs, I suggest a trip to the Imperial War Museum at Duxford near Cambridge, easily reached by road or train from London. There is a ham station there, GB2IWM, and it's open on Tuesdays, Wednesdays & Fridays. They have a fully operational BA station, the RAF T1154/R1155, and there is a small workshop with a store of BAs of all sorts of countries. They also have a pristine Collins set-up donated by a US serviceman returning home and there is some nice German gear on display as well. Added to that you have the new American Air Museum dedicated to the 30000 US airmen who lost their lives in WWII in the European theatre, that's about 200 yards from the station.

Good day out, my son & I went today!

Roger Basford

I snipped your smiley-face because there's a fundamental difference in paradigms between the postal service (in the U.S. and in other countries) and Surplus Sales of Nebraska.

With SSN's outrageous prices, I feel we're only a couple of years away from the madness sweeping high-end audio, in which ANYTHING containing a tube costs a minimum of a thousand bucks.

I predict the next wave in amateur radio will be a fad of "retro-styled" rigs that look like tube gear, perhaps even to the extent of glowing in the dark like a Skyrider, but that contain $3 worth of digital silicon in a 4"square box in the bottom.

How much would YOU pay for a rig that looked like a righteous boat-anchor, had massive chrome knobs, never needed alignment, never needed tubes replaced, had 1 hz tuning and 1 ppm/yr stability, and emitted a faint nocturnal light from the cover, courtesy of carefully chosen LEDs, right down to a copy of the violet flashing of mercury rectifiers you got off a 500-watt AM rig?

Hi Tony, right on. There were 'am actors long before there were any
amateur radio operators. 'am and amateur share the first syllable.
Seems like a natural progression to me.

David,

I hate to be negative, but I don't know a single shop in London that *regularly* stocks WWII era stuff or even any-era BA stuff. We're not well off in the UK for such things. Most of us haunt the Mil vehicle and amateur radio rallies to pick up goodies.

There is a shop in Birmingham - Centre Electronics - that does have some items - well worth a visit if in those parts. Their tel no is (0)121-706-0261. (E-mail for futher details if interested). Another goody in Sheffied (AH Supplies) recently shutdown - reputedly because the UK MOD has changed its policy on releasing surplus items, and will now only sell huge quantities.

OK, OK, I'll go ahead and spend a day making copies.

If you are interested in getting copies of the following items, I need to
RECEIVE the money/check no later than Tuesday, September 16, 1997.

Philco Trouble-Shooting RADIO RECEIVER BC-348-J, BC-348-N
or BC-348-Q. 10 pages. $3.00 mailed CONUS.

E. F. Johnson, TUBE SOCKET STANDARDIZATION -
Standard-Industrial-Miltary, Catalog No. 536. Years 1954, 1957.
Pictures and descriptions of transmitting and industrial tube
sockets.. 14 Pages. $3.50 mailed CONUS.

Collins Mechanical Filters. Bulletin 1031, Year 1962. Has descriptions
in the form of articles. Has catalog. 24 Pages. $4.50 mailed
CONUS.

National Radio Products 1948. Natioanl catalog. Describes receivers and parts.
Covers: HRO-7, HRO-7C, NC-183, NC-57, NC-2-40D, HFS, NC-108R,
NC-108T and dials, chokes, cvariables, hardware, etc. Pictures.
36 Pages. $5.50 mailed CONUS.

Thordarson: Transmitter and Power Amplifier Guide. Year 1934. No. 344.
36 Pages. 5 1/4 x 8 1/4 inches. $5.50 mailed CONUS.

Montgomery Ward & Co., Radio Equipment Catalog. Year 1924-3.
52 pages. $7.50 mailed CONUS.

IF you order more than one item above, DEDUCT $1.00 from the TOTAL
purchase, for the postage saved.

Hi Rich, ...Your HV rectifiers are most likely ok. High voltage
rectifiers actually consist of several diodes in series. Because
of this most meters will not overcome the large forward voltage drop.
I would be happy to send you a copy of the schematic for the 180D.
Just email me your address.

Regards,
Joe, KF9EU

Hi All,
Looking for the original main tuning knob and dial lock assembly for a
Hallicrafters R-274 (SX-73) receiver. Any parts rigs out there?

Thanks and 73,

Bob W9RAN

Hi Tony you have what is called the Golden Eagle from Astatic. If
there is an audio amp in the base it is the newer version...If no amp
then it is an original from the late 60's to 70's...Worth in the range
of $75 to $125... Newer version with amp not as much but close...
The mike is still made today and was probibly one of the most populer
CB mikes made. Wholsale new price is $89.95 from Astatic to the dealer.

The D104 is normerly the prefered mike of most Collins
users..Personally I like the Astatic 10DA the best. Hope that helps
and 73's Bob K1JNN/5

I havent used a HRO-500 in years, but I seem to remember it had a slow
Phase-locked-loop that would take a few seconds to switch megacycles.
Is there a "Unlocked" light that stays on for a few seconds?

it could be just a dirty bandswitch, or the PLL may be a bit out of
adjustment
and taking several tries to lock on. I'd try cleaning the bandswitch with
some
spray cleaner before doing anything more invasive.

Regards.

Source record: 116415

Pardon me, but what is the best and simplest way to verify if an IF
filter has not drifted off after many years ?
My good old TR-7 has a Network Sciences 300Hz filter, and when I
switch to it the S meter goes down 10 dB.
I realigned the rig and found that peaking of Ls and Cs was difficult
to see on the S-meter.
Is it a symptom of ageing filter ?
More, background noise,even after audio filtering, is very annoying.
73 to all,
@@@

It is more universal than that. "Ham actor" referred to an amateur
actor and carried over into radio.

Hi Ray, here's a quote from the "Word For Word" newspaper column:
"An earlier 'Word For Word' suggested that the term 'Ham Actor'
probably referred to the ham fat once used to remove make-up.
On the other hand, a 'Ham Radio Operator' is certainly a play
on the word 'amateur'. The term was coined in the 1920s."

Message-ID: <34177557.6849@thebizlink.com>
Source record: 116502

Where is the appreciation? A DX-100 cost more than $200 new. So did an Apache. Thew NC-303 was in the $500 range and even the Viking II was around $300 in the early 1950's. And this was in 1950's dollars which are worth about 10 times a dollar today. So in essence, these radios are being sold for less than one-tenth their original value. I won't even get into thew original price of the R-390A!

The orignal asking prices:
> The following items are for sale;
> R-390A Receiver (Motorola) - 275.00
> National 303 Receiver with matching speaker and 2 meter converter -
> 235.00
> Hammarlund HQ-170C Receiver 200.00
> National NC- 100 ASD Receiver with matching speaker 65.00 (Plays
> Well but in poor physical cond)
> Heathkit DX-100B Transmitter 200.00
> Heathkit APACHE Transmitter 200.00
> Johnson Viking 11 Transmitter with matching VFO and a complete parts
> rig (dont know if parts rig works)
> Price on Viking 11, VFO and parts rig is 200.00
> The above mentioned radios are in very nice condition and work well.

I collect these fine volumes which are superior in all respects to the ARRL handbooks of even age. Finally found a copy of the 1935 first edition, complete but missing its cover. The second edition of 1936 is one of the better ones. I plan some projects from these.

Hi:
I have the following FS:

Hallicrafters R-46B. Surface rust on bottom inside (can be cleaned up and repainted). Otherwise in excellent shape. $45

Hallicrafters spkr (type unknown) to match S/SX's 9/10/11/12. Wooden black "h". Has a small hole drilled on the side (can be patched and touched up). Non original grill cloth. Very clean otherwise. $75

Junker SP-200 series for parts. Most parts are there. Let me know of your wants.

DX-35 xmtr for parts. Most parts there. $30

All above not including shipping.

Johnson screws for Valiant and Ranger. $8.50 and $7 for each set.
Amphenol 2-pin mic connectors $6
Limited number of 9-pin connectors.$5.25 each
All prices incl shipping.

Contact me for info.

> for 1000 volts, or
> would it still be 500 volts?

Wired in parallel, the value would be 44 uf at 500 volts. In series the value would be 11 uf at 1000 volts. For capacitors wired in parallel the capacitance adds, the voltage stays the same, in series, the capacitance divides, the voltage rating is the sum of the voltage of the two capacitors. Just the opposite of resistors in series/parallel.

> Also, someone suggested that if I do this it would be necessary to
> add resistors to
> "equalize" the load across each capacitor. I have four questions about
> this:

> 1) Is this really necessary?

When connecting capacitors in series it is advisable to add high value resistors across each capacitor to "equalize" the voltage. When doing this, both capacitors should have the same voltage rating or make sure that both have a voltage rating of at least 1/2 the total voltage.

> 2) If it is necessary, how many resistors are needed, one or two?

Two, one resistor across each capacitor

> 3) Do I wire the resistors across each capacitor, or what?

Yes, as above

> 4) How do I determine the resistance and power rating of the resistors?

One or two megohm at 1/2 watt should do.

>

Cal, by Johnson Ranger screws, do you mean the three long screws
holding the chassis to the case? If so, I'd be interested in a set for
my Ranger. They were missing when I bought it. Is that $7.00 for all
three? Please let me know. Thanks.

I havent used a HRO-500 in years, but I seem to remember it had a slow
Phase-locked-loop that would take a few seconds to switch megacycles.
Is there a "Unlocked" light that stays on for a few seconds?

it could be just a dirty bandswitch, or the PLL may be a bit out of
adjustment
and taking several tries to lock on. I'd try cleaning the bandswitch with
some
spray cleaner before doing anything more invasive.

Regards.

I found an S-41 in the early 60s in very poor shape. It did work
though. It had wooden knobs I think. I would guess it was manufactured
around 1949 or just before that. Thats just a guess though. It probably
came out just after the S-38.

If my memory is correct, inside the rig there is a box with the multipole relay. The relays should be gold plated to minimize corrosion, however, dust might have gotten inside. Get some tuner cleaner and spray the contacts.

Source record: 116442
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

At a recent ham fest I picked up a Gonset FVO in hopes that it would work with my Communicator II 2 Meter rig.

The VFO has settings for 6 Meters, 2 Meters, and 220 Mhz. It has 3 RCA jacks on the back , and a cable with a standard x-tal holder atached. I fired up the VFO and the rig, and pluged the x-tal into one of the sockets, but get nothing. I checked the freq at the x-tal holder pins of the VFO with a counter, and get 24-25 Mhz depending on where the band switch is. The rig uses 8 Mhz x-tals, so this will not work. The rig does have a VFO jack in the back, but I dont know what the input to this should be, and also dont know what the 3 rca jacks are for on the VFO. I don't have books on any of this stuff.

Can anyone can tell me if this VFO will work with this radio, and how to hook it up?

Thanks very much, 73's de KB9JJA/Dale

I have an r-390 that I never turn on anymore.
Comes with:
1) slanted funny looking rackmount w/ built in desk
2) MFJ pre-amp
3) a photo-copied DOD manual
4) speaker that fits in rackmount
5) some mono headphones
6) both glow in the dark meters work
I bought the beast about 10 or 12 years ago at the Dayton Hamfest, the rack and preamp sometime after that.
Somebody would have to want the thing!?
I wont give it away but you'd be suprised how low I'd go.
It is in central ohio, and forget about me paying shipping!

Bill

I have 4 Midland handheld UHF commercial radios. They look just like the Icom U-16 radio. I have having a hard time programing the radio. The keyboard was disabled, but that has been fixed. I just can't get the processor to reset or take the info from the keypad. You can get the info up on the scene. If anyone can help or point me in the right direction.

Hello David!

Do you know ROY MORGAN, K1LKY who works at NIST?

He is an avid BA enthusiast too!

OK, as to London, you can find several BA places listed at:

http://www.mnsinc.com/bry/mega/boatanch.htm

and there may be one or two also listed at:

http://www.mnsinc.com/bry/hamlynx/hamboata.htm

Let me know what you find out!

My news server misses a LOT of articles and I may not see all of the
follow-ups to your request.
Also, if you get any additions I could put on the list that would be
great!

I am going over to England, hoefully, next summer and would also like
to visit ANY BA Haunts that are over there these days - even out in
rural areas!

73 to all - Bry, AF4K / G3XLQ

I recently received this rig in the mail. It had been banged around pretty good. After straitening everything out and replacing both finals and the driver I get about 100 watts out. The manual indicates I should get a bit more than that. I seem to be getting the correct amount of plate current and a dip when tuned, just low power out. Any thoughts or suggestions.
I'm also interested in a service manual for the thing. Tnx in advance for and useful input. STAN/KB8JLV

Well its here. I got mine and its not to shabby. Great reference and if nobody else has what your looking for, they probably do. As far as prices are concerned, if your restoring WW2 P51`s or R-390`s and there is only one source, does the price really matter? If cost gives some of us heartburn then maybe we should collect stamps.

2056. Questions on substituting capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-12 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <3419CE07.2617@rational.com>
Source record: 116459

Greetings all,

I recently acquired an R-389/URR receiver which I suspect has a bad
filter capacitor,
C-101. The original capacitor is a 10uf 600 Volt electrolytic capacitor
in a bluish-gray
rectangular can.

I happen to have two 22uf 500 volt brand new electrolytic
capacitors. I know that
if I wired these in parallel, the result would be 11uf in capacitance,
but what about the
voltage rating? Would these two capacitors in parallel be good
for 1000 volts, or
would it still be 500 volts?

Also, someone suggested that if I do this it would be necessary to
add resistors to
"equalize" the load across each capacitor. I have four questions about
this:

1) Is this really necessary?
2) If it is necessary, how many resistors are needed, one or two?
3) Do I wire the resistors across each capacitor, or what?
4) How do I determine the resistance and power rating of the resistors?

If anyone has any answers to these questions, it would really help me
get this R-389
running well again.

Thanks in advance,

Dennis Gibbs

"Ham actor" doesn't necessarily, or even ordinarily, mean *amateur* actor.
It is more generally applied to actors who overact and chew on the scenery
or otherwise attempt to puff their part and grab the limelight from the other
actors. This is called "hamming it up" in the business, and there are a number
of notorious ham actors in the professional acting ranks.

There *is* a certain tendency among amateur radio operators to puff up
their part, IE their self-importance, so there may be the seed of truth here.
It seems unlikely that radio amateurs would want to label themselves in such
a way, but stranger things have happened.

Anchorologists:

I picked up a very nice Barker and Williamson "Little Dipper"
Dip oscillator at the Gaithersburg Hamfest. Unfortunately the one
coil that I really needed was not there. I suspect that this might be
the kind of item that is lurking in someone's junkbox. Before I
convert one of the VHF coils into a 2-4 Mhz coil, I thought I'd ask
the group if anyone has one sitting around.

I'm looking for the 2-4 Mhz plug in coil.

Hi Stan,
Swan didn't make a Service Manual, there owners manual
is a Operation and Maintenance manual. If you need one
try W7FG Vintage Manuale at 1-800-807-6146 or try,

http://www.w7fg.com

He has them for $16.00
Good luck & 73,
Boyd N6DMF

I have used fishing line without rosin... seems to work OK. The best is thin white nylon string I got from fishing department at local Wal-Mart. It came in a blister pack with hooks. It was used for stringers... you might also check hardware store, they carry small springs for the dial drum.

Source record: 116379

I have been around SWANs for awhile and I really don't think there was a service manual ever published... SWAN assumed the owner had experience with tube electronics...

Since you replaced the finals - Did you Nuetralized the amp? You MUST do this every time you change a tube in the PA section.

Nuetral cap injects a small amount of RF 180 deg out of phase to keep the tubes from oscillating - mostly on 15 and 10 meters. It DOES have an effect on output power.

Also, you might want to check your bias adjustment.

Some advice.... a SWAN 500 doesn't mean it puts out 500 Watts. This is input power. That would make it 250 Watts out (SSB) ... and THAT means absolute peak power on 80 Meters running a two tone audio signal with the wind blowing just right...

Also, if you have not noticed it - CW power is lower. That's by design. Power also falls off quite a bit on 15 and 10 meters. This is because TV sweep tubes are not efficient at those frequencies.

120 - 150 Watts indication on a SWR meter is about right..

2079. B+ problem in R-389/R-390/R-391 solved!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-13 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <341AAABC.787F@rational.com>
Source record: 116388

Greetings all,

Several of you responded to my request for help regarding replacement of a single
10uf 600 Volt B+ filter capacitor with two 22uf capacitors. I have tried to respond to
each of you individually, but some replies bounced. Many thanks for the help, but
it turns out it wasn't needed!

Bill Hawkins pointed out that the filter capacitor in question, (C-101) is actually an
oil-filled capacitor, NOT an electrolytic capacitor. These capacitors have low failure
rates. I had already replaced every out of tolerance resistor in the B+ Regulation
circuits, as well as all other capacitors, except for C-608. Well, it turns out C-608
was the culprit!

I am posting this information here because I believe this is a very common problem
with the B+ regulator circuitry, which is identical in the R-389, R-390 (Non - 'A'), and
R-391 receivers. The symptom of the problem is as follows: Initially, the receiver
works fine when first turned on. But as it continues to operate over a period of 15-
20 minutes or so, a hum gradually develops in the audio. Measuring the B+ voltage
from the port on the left side of the receiver (as you face the front panel) indicated
that the B+ voltage would start out around 180 volts (which is correct), but would
slowly drop to around 130 Volts, when the hum was very objectionable. Also, I
noted that the 5651 Cold-cathode regulators would gradually become dimmer as
this happened.

C-608 is a 22uf 300 Volt capacitor with a metal case. It also has a clamp which is
attached to the bulkhead on the underside of the Audio module. It appears as though
the failure is heat-related, as the clamp is attached to the compartment

that contains
the blistering-hot twin 6082 tubes. As the receiver warmed up, the
clamp acted as
a heat-sink which heated up C-608. Replacing C-608 cured the problem.
I'll bet
that if I had used one of those "component cooler" sprays I could have
detected the
faulty part faster.

This also underscores the need for additional cooling in this receiver,
preferably via
a fan of some sort. This is the fourth time I have seen this problem on
this series of
receivers.

I hope this helps someone else out there.

this and the unit is functioning perfectly, IMHO. As far as I am concerned this is a normal operation indication. I wouldn't worry about redesigning the AGC.
You be the judge. Convince yourself that gutting the AGC is _ABSOLUTLEY_ necessary. Why compromise a perfectly good radio?
Good luck, Chuck.

2102. FTV=WEFAX,FAX,SSTV,RTTY,CW with SoundBlaster

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-14 00:00:00 UTC
From: "Brian E. Cauchi" <briane@geocities.com>
Message-ID: <5vggo7$m2c@news.keyworld.net>
Source record: 116215
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.scanner,rec.radio.shortwave

FTV (now in Version 1.0)can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software. The main features include:

WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

You may get more information or download a copy from my web site, on

I doubt it is made of gold, as another poster suggested.
It may however be quite overpriced.
As a reference: Last month I bought a National HRO-60
with five coil sets, X-tal cal option and HD power supply option.
this one was built for and used as a BCB station monitor for many
years. The term "mint" is highly overused in our hobby but this one
came close. Very well cared for by the station engineer, it was as
nice an HRO-60 as I have ever seen. $350 brought it home.

2111. Wanted: Crystals for Maxon CP-0510-P

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-14 00:00:00 UTC
From: richardb@evansville.net
Message-ID: <341b67f2.8168006@204.120.16.3>
Source record: 116269
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.swap

Hello

I'm looking for crystals to put in a Maxon CP-0510-P (I think
that's the model) handheld radio.
This is for some radios used at a local business here, and I'm
unsure what frequencies these are on now, but I'm sure they are in an
unlicensed business band. The radios were purchased with three
frequencies set, and have a fourth position open.

Getting to the point:
Where is a good source for these crystals?
(Well-known and on the net preferred, but whatever...)
Do these require "Maxon-type" crystals, or does one fit all?
(No, I wouldn't recognize a crystal if I sat on it...)
Anyone have an idea how to replace the crystals in these
things? We took the battery pack off the back, and found a flat metal
plate with several screws holding it in. Do we remove it to reach the
crystals? Go in another way? Am I braindead, and this radio not use
crystals?

Any help would be greatly appreciated!
Rich

Source record: 116271

I was at a hamfest this weekend and overheard a very loud arguement that I quickly became involved in.....the topic was that "hams" that are licensed today dont know anything about electronics......this for the most part is true if you compare it to an engineer that has made electronics his entire life. But the amateur license doesnt require you to have any tech ability or and understanding of electronics......If the person fills the bill of fare from the FCC and passes the exam that is learned word for word from the book in the exact order of the FCC exam, then learns code " learning code also a big issue with this guy " the person will obtain an FCC license.......Also he didn't accept the fact the the license is not yours but the FCC. And that the FCC has the right to revoke this license at any time without ever giving the holder a chance to speak.....The final blow that knocked this guy out was the over the "CB" band...the words could not be repeated here in this forum..... The only problem that would happen if hams had a better understanding of electronics is companies like MFJ and the rest of that bunch would go under in a week or so.

Just a quick note to let you know there's a lot of 150 metal octal tube "pulls" listed on eBay auction. There is no reserve price and so will be sold to the highest bidder. Here's the info.......

I have an estate accumlation of octal pin metal tubes. These are untested but the random selection I took tested good on ly TV-7.

Some of the tubes included in this lot are:

5T4 6SJ7 12SJ7 OZ4A 1612 12SG7 6J7 6C5 6F5 6F8 6Q7

6A5 6V6 6R7 6H6 12C8 6SC7 6L7 6SS7 6SK7 6AC7 12SK7

6SF5 12C8 12A6 12K8 and more.

Item Number 287014: Lot: 150 Metal Octal Tubes, used
Current bid: $9.99
Auction ends on: 09/18/97, 03:30:30 PDT

http://komodo.ebay2.com/aw-cgi/ItemISAPI.dll?ViewItem&item=287014

Good luck and enjoy!

> FCC license.......

Since you don't make it clear which side of this arguement you're on,
I'd like to make a couple comments.

Not having taken an amateur exam since passing my General in 1962, I can
only hope that todays exam asks SOMETHING about electronics. The
license permits an amateur radio operator to make adjustments to his
transmitter -- not just knob-twiddling but internal adjustments. This
is not something to be done by the unknowing as interference to other
communication mediums may result. Circuit knowledge was required. I
cannot believe the statement " the amateur license doesnt require you to
have any tech ability or and understanding of electronics" could be
accurate, nor SHOULD it be. If one "learns to pass the test" instead of
learning the theory upon which the test is based, that degrades the
individual, not the test.

You continue:
>Also he didn't accept the fact the the license is not
> yours but the FCC. And that the FCC has the right to revoke this license
> at any time without ever giving the holder a chance to speak.....

This is not true. First, YOU don't actually have a license at all --
your STATION has a license which is supposed to be displayed at the
operating position. YOU have, as well, a permit to operate a licensed
station within the parameters of your permit. That is why, when
visiting another ham's shack and operating his gear, you must use the
call-sign of the STATION rather than *your* call-sign. Your permit
allows YOU to operate using certain modes, within certain frequency
limits. You may not do otherwise at ANY station unless the transmitter
is being controlled by an individual possessing the appropriate
certification. The FCC has prescribed revokation and appeal processes

that are followed in prosecuting those engaged in illegal operation.
Yes, the STATION may be ordered shut down to avoid continued spectrum
disruption. However, even *this* step is taken after in-depth
investigation. To permit the station to continue broadcasting in a
manner detrimental to others would be a disservice to all.

> The only problem that
> would happen if hams had a better understanding of electronics is companies
> like MFJ and the rest of that bunch would go under in a week or so.

Why would that be? Hams have had, for years, the option of building
their own equipment or buying "off-the-shelf" units. Most hams prefer
to purchase pre-built items now that the major kit manufacturers (Allied
Radio, Heath, Eico) are gone. Even when kits were available (and there
is a satisfaction in using something you *built* -- even if it wasn't
your *design*), most hams opted otherwise. As circuits became more
compact and solid-state devices more prevalent, kits became less a
chosen option. Even professional auto mechanics don't build their own
cars. The statement "If more people had a better understanding of
automotive principles, GM would be out of business" holds about as much
water as the quoted statement.

Dave, I hope you acted on our behalf and set this guy straight!

From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <5vhm6k$88d$1@csu-b.csuohio.edu>
Source record: 116299

TV-2 Series military tube tester wanted. Maybe you're tired of all the settings to test a simple tube and I can provide a decent easy and quick to use replacement unit as part of the deal for your TV-2 if you wish.

I am not a dealer, but an old full-time student trying to get out of school before social security sets in :) I have become fascinated with tube testers and wish to collect them as strange as that sounds to use with my collection musical instrument amps of that I have gathered over 30 years. In reality all anybody really needs is one basic Gm unit-nothing more if you think about it. I realize this.

I am long on things to trade (some very nice valuable goodies in various categories) and short on cash--hopefully we can perhaps work out some combo of things to swap and/or straight cash. Actually, if you decide to swap in some form, you'll come out far, far ahead of the pittance that dealers will offer you for a unit when they buy a TV-2 considering the value of some of the goodies I have to swap if you can use same.

Please, no dealers--as a full time student doing this as a hobby with my wife rightfully watching my toy expenditures, I cannot afford any tube tester that has suddenly become solid gold after it has been purchased for a pittance. I am not being critical--I realize dealers are in business to make as much money as possible with caveat emptor.

Thank you.

2142. What are these?

Source record: 116300

I just found a large box of tubes that I bought at an auction around 1980 at a local university. I have no idea what they are (or why I bought them). This is a 2 by 2 box full of tubes with an inventory on the side as follows:

31 VU33 10E/9829
3 VU33 10A/9829
45 VR21 10E/7738
33 VR27 10E/8239
22 VU111S
1 101D

What are these things? They appear to be unused. Should I give this box the heave-ho or hang onto it? Any info will be appreciated.

Most of the surplus speakers (like for all VRC units) have a 500 to 8
ohm transformer inside. OR one can use a small filament transformer!
The turns ratio works out quite well. The onlt thing you lose it a bit
of frequency response, using the fil. xformer. Simply hook the 110
primary to the 500 ohm rec output and the 6.3 winding to the spkr...

Folks beware of W1QLF Brandon (aka. Nick). He enjoys adding stuff for sale and never returns your phone calls, so you assume the gear was sold. Then a couple of weeks later the same stuff is for sale. Then you call him again and the same results, his wife answers the phone and says he is not home. Then, yes a couple of weeks later the same gear shows up again for sale. I chased some Drake gear last year for about a month and a half. Nick is his SK grandfathers name and he has obtained his call also. I chased all this information
down by talking to his grandmother when I looked up the call and it showed as being listed to Nick in Marlboro, Ma. Brandon lives in Clinton, Ma.

Just thought this needed to be posted, so if you call on his Collins equipment for sale don't be surprised if you get the same relults.

2157. Re: Why the term ---HAM---

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-14 00:00:00 UTC
From: "Gregory T. Helding" <gth@execpc.com>
Message-ID: <01bcc0b0$60b234c0$342afacf@gth>
Source record: 116411
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I read that the term was first used in a telegraph operator training guide.
A ham (not an acronym) was a bad or inexperienced operator. This was
before radio. When radio came about, there were not the regulations and
restrictions we have today, so people operated wherever and however they
wanted. The troublesome operators were called hams by military operators.
This name stuck and eventually the term came to mean all amateurs, not just
bad ones.

-Greg

Source record: 116220

Well there are a lot of personal reasons for someone to obtain an amateur license that includes the station license and all the other pieces of paper that go along with it, however I can tell you that the FCC is in charge of the material that is placed on their exams.....the order that the questions are given and the multiple choice answeres that the person taking the exam must choose from.....I can tell you that the questions and answeres on the exam are word for word the same questions that are in the study manuel..... This procedure makes it easy for anyone to memorize the entire exam. I can tell you that anyone CAN if they choose obtain an amateur license without knowing one thing about electronics.....I can also tell you that I could show a child with a good memory how to tune up a 50 kw broadcast transmitter in a few hours.....This is how most of the amateurs operate: First they call up and order some sort of transceiver with a built in antenna tuner.....then with the antenna projects book that was borrowed from someone else, a poorly constructed antenna is thrown between a couple of trees.....the length has already been calculated for you.....and even if its off 10 feet or so the built in tuner will fix that.....Next, comes the plug and play mode.....read the operators manuel on the operation of the transceiver and within an hour anyone who can read and follow basic instructions will be on the air....

I fail to see any electronic ability here.....

If you think this is a tall story, put it to the test... ASK ANY AMATEUR THAT HAS OBTAINED HIS OR HER LICENSE IN THE LAST FEW YEARS TO EXPLAIN TO YOU WHAT IS GOING ON WHEN EACH OF THE CONTROLS OF A TRANSCEIVER ARE ADJUSTED.....This does not mean if you turn the volume control clockwise the voice gets louder as an answere. I would say about 10% have correct answeres.

All of the comments that have come my way have been from amateurs that HAVE the desire to learn and understand electronics. This is an option and is not the desire of everyone that obtains an amateur license, nor should it be.....amateurs that have no technical ability operate transmitting equipment as well as amateurs with engineering backrounds .. All it takes is the ability to follow rules and regulations, (that can be memorized) read and follow the operating procedures in the transceivers operating manuel (that can be memorized) and you could not tell who is on the other end of a microphone.

If you think that amateur radio operators should have understanding of electronics and transmitter theory as pre rec then the testing requirement will have to change.....Oh by the way the numbers of hams decline each year, can you wonder how few people would get involved if the requirements were increased to enclude an electronic tech 101 program..

I have a BRAND NEW in the box 5CX1500 Eimac tube that I bought a few years ago for when my Henry 4K needed a new tube. I sold the amp (working just fine) with the old tube in it and never needed the NEW tube.
It runs over $1300 new from Eimac.
This tube has been and is still in the possession of Ted Henry of Henry Radio. I kept it there because I thought I would put it on consignment. Well they no longer do Ham Radio as a retail business, so I offer it here. You can call Ted and he will vouch for this tube!

I ask $475 plus shipping.

If you're tired of duds or other junk tubes, you will be pleased to solve your tube problems with this NEW tube. Probably last as long as you do!

>NEVER EVER send a check to anyone at a PO box!
>
>no matter how confident you are about that person.....

This is a load of nonsense. Some people who do not have letter carrier service have no alternative to using a PO box. Just because someone has to use a PO box doesn't mean that person is dishonest.

The community in which I live does not have letter carrier delivery. My PO box costs me less than it would if I had delivery service available. Now if I wanted to give a street address I could do so and the letter would still end up in my PO Box because the folks at the Post Office would know I have no carrier service and place the letter in my PO box anyways.

Better than take Jim's advice, here is what you can do to protect yourself when dealing with someone you don't know through the mails:

1. Ask them for their home and business telephone numbers.

2. Pay with a U.S. Postal Money Order.

3. Ask them for references - names of other folks who have bought stuff from them through the mails in the past.

4. You may also contact the Postmaster at their post office and ask if there have been any complaints about them in the past.

This is a much better strategy than just refusing to deal with someone because he/she has a PO box.

I have used black fishing line. Generally there should be little or no slippage since one end is usually anchored with a small spring to one of the pulleys. The other shaft probably had a two or three turn loop. If you do experience slippage, try beeswax on the fish line. I bought my fishline at a sporting goods store since the local K-mart did not have anything but the newer nylon variety. Got the beeswax there too.

Add to greg`s quote the fact that large hands were/are sometimes called
"hams" and that they were thought to belong to "heavy handed people"
which may result in a "poor fist" then we start to get a plausible
answer.

When I firsted hamming -(about 30 yrs ago - no longer active) I seem to
remember the Radio Amateur`s handbook had the facts about the term but
darned if I remember what they said/ 73s/rod

>>snip>>

Rick,

these appear to be mostly UK RAF valves - you can tell by the "10E/..." reference number. This is the old scheme which I believe dates back to the days of the Air Ministry in the UK, and pre-dates the "CV" (Common Valve, i.e. common across all services) valve numbering scheme.

VU33 is equivalent to CV1033 and is a rectifier. Note I suspect those with a 10A/ prefix are possibly a mis-print, as I can find no record of this as an alternative to 10E/.

VR21 is equivalent to CV1021/210LF and is a receiving triode. A rough equivalent to these appears to be the Mazda L21 which has 2.0V, 0.1A filament(directly heated), 150 volts Va max, and gm of 1.8 mA/V.

VR27 is equivalent to CV1027 and is a selected VR21.

VU111S not sure. The VU111 is an EHT rectifier, equiv to CV1111/V1907/R11, and I guess the S suffix could stand for 'selected'. The R11 is listed as 4.0V 1.1A heater, 5,000V input max, at 5.0mA max rectified current.

101D haven't a clue!

No idea off-hand which particular RAF sets these might come from. Given the finite supply of valves these days seems a pity to sling them. Perhaps someone at your end of the world will offer to buy them.

In mil equipement of that vintage CKxxx numbers are usually solid state
diodes or diod arrays. There often some in '50s vintage equipement.
I run an AN/GRC-9 and the CK numbers are diodes (not the same as yours
though.

Hi,
I really didn't know where to post this one. I can't fit it into the 'angry', 'frustated', or other weirdball categorys so I try this one.

I picked the call W9LZ as a vanity call because it had a nice 'ring' on CW. At least to me! Anyway, I came to find out that this call was originally granted as 9LZ to a Charles Seese. I'd like find out if any of his old cronies are still around, and if Mr. was affiliated with Seeburg the Juke Box company. I used to work in the engineering dept. at Zenith on Dickens Ave. in Chicago. As a student/tech, I used to have to 'go fetch' Trans-Oceanic's for the Inventer of the Zenith Radio, Karl Hassel, whenever he made a 'real good DX contact' (which was at least one a day!), that was his QSL card!!!

I'll never forget those days, I was drafted/slicked 'em by enlisting, and when I returned from Vietnam, Mr. Hassel was gone, A week after I got back, I quit.

I've lived in Indiana for the past 20 years, and that is a distant memory. Anyway, if you knew, or know someone who may have known 9LZ. I'd like to QSO with them.

Jim - W9LZ

>Good luck, Chuck.
>Dick, K9FFK

The receiver was gutted when I got it, so I'm not worried
about it being "authentic". Compared to the nearly complete
rewire of the detector/agc section I had to make to return
the receiver to normal, the AGC mods are relatively minor.

I've made the change, taking the AGC from the audio circuit,
biasing the AGC positive, and clamping it to +0v with the
6al5 diode that used to be the AGC rectifier. The pronounced
downward twitching is gone, replaced by a slight upward
twitching on modulation. I'll post the mod after I'm
satisified with it.

HI PAUL, THE HALLICRAFTERS SX 88 RECEIVER CAME OUT APPROX. 1954 NOT TOO
MANY MADE (I DO NOT KNOW THE EXACT AMOUNT) SELLING PRICE IN 1954 595.00
IT WAS NOT A GREAT RECEIVER BUT NOT BAD . THE 1400.00 PRICE IS QUITE STEEP
BUT IF SOMEONE WANTS TO COMPLETE A COLLECTION I GUESS THEY WOULD PAY THAT
AMOUNT. I GUESS I SHOULD HAVE HELD ON TO THE ONE I HAD . SUPPLY AND DEMAND
IS THE WAY THE PRICING OF OLDER EQUIPMENT SEEMS TO BE GOING.I HOPE THIS
LITTLE BIT OF INFO. IS HELPFUL.

Visit your local fishing supply store and get some line that looks just
like the dial cord. Then settle down in a nice quite place with a
little time and some good needle nosed pliers and you can do it.

How does it help to use Postal Money Order as form of payment? About
6 years ago I ordered a disk drive from a mail order house in
Huntington, West Virginia and included a Postal Money Order for about

$280. I got zilch in return because the company went bankrupt and
across to Ohio overnight. The Post Office was NO HELP WHATSOEVER.

2220. Collins DC Voltmeter ???s

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-16 00:00:00 UTC
From: nospam@nospam.com
Message-ID: <5vmaam$c4t$1@hardcopy.ny.jpmorgan.com>
Source record: 116329

Background

Over the weekend I picked up an old NOS Collins Voltmeter - the little
black panel mount type that's 0-500vdc with 400V marked in red. Sorry
I don't have the part# handy.

I want to use it to monitor a variable powersupply I'm building
(0-450vdc). Thing is I can not hook it up directly to +/gnd (or else
it reads way too high). However I do get accuracy (per my DMM) by
tapping 1/5th of a 600K resistance ladder:

R1 R2
+ ---/\/\/\/---/\/\/---------- gnd
500K | 100k
|
|->[+ on meter]-> gnd

This circuit takes about 60-70milliamps to run 1/2 scale (about 1/2
that for the meter itself).

Questions

I'm hoping some Collins expert out there can tell me if a external
resistance ladder is typically used with this meter and if the
resistance values chosen here roughly correspond to what is generally
seen in Collins equipment (or what they are).

Thanks,

Lewis

Gentlemen, have you forgotten what "QLF" stands for?

Back to reality -- handling an SK sale isn't always easy.
Sometimes there's grief and other emotional baggage involved.
Add to that the problems with getting in touch with people
in our too-fast times. Multiply that by the fact that Internet
communications are at best unreliable, and NEVER operate in
real time.

And finally, remember that this is just a hobby. I know
how important it is when you find a "deal" and how
frustrating it can be when the deal falls through.

Don't lose sleep over it -- just keep pluggin' away.
It's a lot like working DX.

Obligatory boatanchor content -- the mailman brought me
the 1997 ARRL handbook and 6", 50-lb bench vise yesterday.
The new ARRL handbook (once again) has plans for projects
requiring parts not manufactured in the last 40 years.
Fortunately, I can tie the book to the vise and throw them
both in the lake, there to safely rest until iron floats and
receiving vacuum tubes are again manufactured.

From: pmalvasi@aol.com
Message-ID: <19970916131901.JAA05197@ladder02.news.aol.com>
Source record: 116331

The J38 has become a very popular collectible US military key and is readily available at many hamfests which allows it avoid become a precious and hoarded collectible item as many of the older bugs have become. However, it should be noted that the J38 was not a radio key - it was a code practice key and never was connected (under normal circumstances at least) to transmitting equipment. The two eyehooks at the end of the base were used to secure the mating headsets for code practice. Despite this it is a very well built key.

For those who want a radio key of the same vintage (WW2) the J37 is the one to get. This is the key which is often found on those leg clamps but many were mounted in other ways. The J37 has no coil spring but a leaf spring which is integral to the frame making it more reliable and rugged in the field than the J38. There are many variations of the J37 mount which each are marked with their own J number such as J45. J37's were also the key used on US military aircraft along with the J5A.

Pete is correct, the J-38 was originally a code practice key used by the US Army Signal Corps to train radio operators. It was, however, ideally suited to amateur use, and after the war there were literally thousands available brand new on the surplus market for "give-away" prices. It was a beautifully built key, typical of US Government wartime construction, and was available well into the middle '50's. My mom bought me a J-38, along with a copy of "How to Become a Radio Amateur" in 1953, at Harrison Radio, New York. I believe the key was $1.50 and the book 50 cents. Quite a bargain for an 11 year old kid...and a great beginning to a lifelong interest in amateur radio and a carreer in engineering! I still have the J-38; will always treasure that key!

Hello,
before this thread I had heard of three explanations for the term
HAM. This thread has had all kinds of variations on those three. What
gets me is the willingness no focus on the negative definitions, I don't
deny there are poor operators in the amateur ranks.

there is no absolute definitions of the term HAM, why worry about it?
If a none amateur asks for a definition, what's wrong with replying.
There is no verifiable answer, it's only a nick-name. IE; roughneck,
swamper and so on?

From: n1ddzrjc@aol.com
Message-ID: <19970916161900.MAA07939@ladder01.news.aol.com>
Source record: 116337

Need a couple of silica gel capsules to replace broken ones. Don't care to make up my own. These look like a glass sparkplug and have silica gel inside. Cobalt chloride indicator turns blue when dry and pink when saturated with moisture. They are desiged to screw into the master oscillator of Collins radios, and for other electronic and industrial equipment.

Any help appreciated - perhaps you know of a source?

I thing Greg has the right idea. You might also look for a 600 ohm to 8 ohm audio transformer at Radio Shack (they used to have them) to mount into an available 8 ohm speaker.

---

FOR SALE: R-390A radio receiver. This one was made by CAPEHART CORP.
Order Number 21582-PC-61 made in 1961.

It is in excellent condition. The front panel is nice with no wear marks
around the rack mounting holes and no wear around the KILOCYCLES tuning
knob. This one must have been parked on one frequency monitoring a Soviet
RTTY circuit. The mechanics are nice and tight - no slop in the tuning.

The radiois complete with both original meters and top and bottom covers.
All tubes checked okay and the radio receives very well. It has not been
modified.

Price is $400.00 plus shipping. Yes, I will ship it in two pieces.

If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

I have a classic boatanchor book, 'Elements of Radio' by Marcus and Marcus. 2nd edition, 1948, hardback in very good condition.

Covers all sorts of theory, tube fundamentals and operation, regenerative detectors, af amps, batteries, ac/dc supplies, speakers, rf amps, superhets, antennas, electromagnetic waves, cw, am, oscilloscopes, etc.

One of my favorite reads. I have 2 copies and only need 1, so someone else can have one. $10 plus shipping.

No doubt bypass capacitors have failed to the point one is shorted.

Should I retest the tubes? And if they test good, what
> else should I look for?

Replace the paper capacitors in the set, and check all the resistors.
Replace those that are 20 per-cent or worse off-value. (I replace
those that are out of tolerance according to their markings.)

The set will play better than when you obtained the receiver.

In the past I have several times seen the following explanation of where "ham" is derived. In short, 3 early 1910's technicians has set up a transmitter. When the new rulings came in they asked to keep the system on the air and their initials (H.A.M.) was used to name that the users of those allocated frequencies.

This is a great ploy service people use on unsuspecting 'newbies' -
"My Gawd the great virus destroyed your computer - fortunately I just
happen to have a new one here that I can let you have real cheap"

Most manufacturers of recieving tubes are in the old communist bloc. Sovtek and Svetlana are in Russia, EI is in Serbia, Tesla is in the Czech Republic, and don't forget all those anonymous tube makers in China. Maybe Stalinism wasn't so bad after all. ;)

As for Western Electric, their Westrex 300B seems never to have materialized-every so often somebody will post to rec.audio.tubes looking for one. Places like Triode Electronics (www.triodeel.com) have never seen the promised 300B. For right now it seems to be as tangible as Windows 97-oops, Windows 98.

>
> Any help would be most welcome....

I have a 1R5 with the underlined W logo, and the box design would place it sometime in the 1950s. So the tube isn't THAT old. Remember that some old style tubes, like the 80, were made into the 60s. As for what the tube actually is, I don't know.

Source record: 116361

On hand:
Original Power connectors that plug into the back of
"ARC-5" style command sets. These fit all receivers,
BC-4xx and type ATA transmitters. They do *not*
fit "T-xx" series transmitters. These are original,
pulled from racks. (Don't blame me! I didn't pull them!)
40 available.
Other connectors removed from original racks and
plugs for wiring also available.
Email if interested.

Source record: 116115

I've got a quantity (probably 100+) of genuine MIL, 1/4 in.,solid brass, PJ-055B (PL-55) also known as M642/4-1. These are not your Radio Shack chrome jobs, but solid milled brass. All are in sealed packets with sleeve, lugs, clamp, and those tiny screws we all enjoy! (you mean you don't have one of those special screwdrivers??!!) I'd rather sell to B/A collectors first and spread them around! 1-10 $2.50/ea.+ $.50 postage or 10/$20 plus $1 postage. Does this sound reasonable?

From: Randy/DeeDee/Robin <dc@citynet.net>
Message-ID: <3421F691.3875@citynet.net>
Source record: 116117

Just curious, I have a freq. counter which I don't know if I want to sell, and was wondering what it would bring... It's a heath IM-2410 and looks if it were just completed today. Mint doesn't describe it..more like pristine. The only elect. deficiencies are the display blocks having one bar burned out.(the first block and the last block have one bar out.) so the only one u notice is the last one. It will read 225.0000 and the only bar u notice out is the fourth '0' depending on what the gate is set at. someone let me know what the public would offer for this. (if it seems worth it, I'll sell... I know it's not worth major money..)
thanks,
Randy, KC8CPK

Bill, that brings back memories of my college days. The lab at Univ of Mi
that I worked in one summer purchased something like 5 of these pups. Each
one of them had to be slightly realigned to bring it into spec. One had the
diodes in the PLL detector bad. I replaced them with some generic Germanium
diodes and managed to get it working before we had to commit it to some
field work. It may take a short time for the loop to lock. And if the tuning
has drifted much it may not lock from one direction or the other. For the
most part realignment was pretty easy, though. They were nice radios for
their day, although I think I'd prefer an emptystate electronics radio from
that era if IMD and overload considerations are important.

Gosh - that was just a WHOLE LOT of years ago - something like '64? Yipe!

Anthony, you are mistaken. That is what *I* used to think too, until
someone informed me that the number of hams has DOUBLED in the last 5y
ears since they introduced the Anti-code Tech license (just kidding!).

It has gone from about 250,000 U.S. hams to over 500,000 now.

Unless they lied to me, you have it backwards!

My opinion is that they should STILL have to know something about
electronics!! After all, that is a large part of what the PURPOSE Of
amateur radio is about according to its charter - to provide a "POOL
OF TRAINED ELECTRONIC TECHNICIANS." or something like that!

Hi Rick...

I agree with most of what you say but apparently you have not kept up
with some changes in the rules. Maybe NONE Of us have! There are a LOT
of changes in the past 22 years... a LOT!!! FCC has been VERY busy
spending your tax dollars on new rules!

Well, we are drifting from the NG topic a bit here. But take a look some time at the UNDERLYING result of our present "Capitalism." Capitalism is not the problem. Greed is. Your "innocent tightwads" are taking all the money from the poor and middle class. Our present "Great Economy" is a media lie. There are more people in debt than ever before. That should tell you something. The rich get greedier all the time.

As a matter of interest, if anyone is interested.

Recently Mike offered for sale some items that interested me. I sent him a check, to the P.O. Box since that is the address he has; interestingly enough what I bought from him arrived by return mail. So, the analogy to never send money to someone with a P.O. Box doesn't hold water in this case.

There are good people (mostly) and bad people, how they recieve their mail has little bearing on their character.

2299. Questions on substituting capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-18 00:00:00 UTC
From: staylor@whpost.wh.lucent.COM
Message-ID: <c=US%a=_%p=Lucent_Technolog%l=WHPOST-970918123705Z-36881@whpost.wh.lucent.com>
Source record: 116199

First, in paralleling two caps, the capacitance is additive. The two 22uf caps in parallel will result in 44 uf. If the circuit in question doesn't have over 500 volts (which is probably the case in a receiver anyway) just use one 22uf unit. Filter cap values in your application aren't critical anyway.

Secondly, most electrolytic caps have a -20, +80 % value tolerance. Just use one cap and you will be fine. The original 600 volt cap rating was used because it was the nearest standard value available with an excessive safety factor. If you really want to get 11 uf, use two 22 uf caps in SERIES. You need an equalizing resistor (try 50 K at 5 watts across each cap. Equalizing resistors are used for electrolytics in series because of the wide value tolerances of the caps . The resistors ensure that each cap will see no more than half the applied voltage from the rectifier (assuming two caps in series).

Cross-posted to: alt.cellular-phone-tech,rec.radio.amateur.boatanchors,rec.radio.swap

Thruline Wattmeter, Model 4314 by Bird Electronic Corp.

Factory production model, not a type 43 with an aftermarket
kit. 26 page manual (reprint) with sections for intro, prep,
operating, maint., trouble shooting, calibration, repair and
replacement parts listing.

The unit is the same size and shape as a model 43, and has
2 additional controls near the bottom of the front under the
element cavity; one is for battery test, and the other is for
peak reading, which allows use of the meter as an average power
reading instrument also. Pain color is light gray, ID plate on
top of unit with model and serial #, spare element storage holes
on both sides, fuse holder and AC input, N connections input
and output. Rubber feet on both bottom and back, 110/220 input
selector switch on back.

Shows definite sign of use. Has paint chips on front, and one side
has paint sanded away on small area for an inventory control number
to be engraved, which is still visable.

$ 250.00, with the manual and charging cable for charging
internal battery from AC.

------ OR -----------

Will consider trades. Looking for good EPROM programmer, 2006
scanner, tube tester, R-417 receiver, Basic Stamp development system,
other test equipment, VHF/UHF gear or items related to computer
assisted monitoring of equal value.

Central Lab Model 20 A
Multiphase Exciter
10 - 160 Meters

Circa 1954.
SSB, AM, PM, CW, and VOX operation.

Weight: 32 POUNDS - Unboxed

Manual with schematic, includes operating, alignment,
Block Diagrams and Sample Waveforms.

Tubes:

6AL5, 6U8, 6BA7, 12BH7, 5U4GA
12AT7 - (qty 3), 6AG7 - (Qty 2)
6E5 - RF Indicator

Rear Panel:

VFO - 8 pin Octal, SO239 Coax Antenna
Screw-terminals for ANT & GND
VOX sensitivity control pot.
Ten point Terminal Strip
Fuse Holder and Audio 1/4" Jack

Front Panel:

Carrier Level, Indicator Level (pots)
Indicator Fnction - Set Max Level/Carrier Null
Mixer Tuning Band Amplifier Tuning
(1.8-29 10-160 1.8-29)
Speech Level, Carrier Null {A&B}(pots)
Modulation-SB1, SB2, AM, PM, CW (switch)
Carrier Level - Min to Max - Graduated Pot
VFO-XTAL Switch and XTAL Socket (FT-243)
Operation-VOX, STBY, CAL, STBY, MAN (switch)
Power Switch, RF Indicator (6E5 "Tuning Eye")
AF Input. Key, Phones - (1/4" Jack)
Mic - Amphenol Microphone Connector)

Overall Cosmetic Condition:

Good to very Good - Paint has chipping on top of
front panel. Front Panel very good, all labels
visable with little signs of wear. Scribe marks
on Mixer and Amplifier Tuning Scales, as well as

around "SB1" label on Modulation Label.

$100.00 plus shipping on 32 lbs from 31523

Bry-

It's the tri-bander, 80/40/20. Nice little boatanchor. Was sold with a DC supply and designed as a mobile transceiver as well as base station.

It's spoken for. Thanks for all the interest!

73, George

There is only one known way that a virus can be spread by e-mail. That is
if the e-mail has a spreadsheet attachment. It is possible to build macros
into the spreadsheet that will do nasty things to your PC. To counter this,
you simply turn off the "imported macro" (or whatever it is called)
capability on the spreadsheet software.

The REAL virus is all the people sending all those stupid warnings about
e-mail viruses to everyone they can contact.

K0PW wrote:

> What makes an Hallicrafters SX-88 worth so much? I'm not familiar
> with this receiver -- what, exactly, is it?

A combination of nostalgia, scarcity, and greed, for the most part.

The receiver originally listed for $695.00 new back in the 1950s, and I suppose that a lot of the sellers would do the "if we express that in 1997 dollars" exercise to justify what they sell for today.

About all that I can immediately think of regarding the internals is two RF stages, and push-pull audio using 6V6s, much like the HRO-50 or HRO-60.

But the price does not really have anything to do with the receiver's performance, from what I can see. As has been already pointed out, a restored R-390A will probably outrun it, as will most of the more sophisticated modern receivers. Pricing on this radio is purely an emotional issue.

C.K.

This is not quite true. The FCC may not revoke a ham license without ever giving the licensee a chance to speak. Before the commission can revoke a license it must offer the licensee a chance to answer any charges. This may be done in writing, or even at a hearing. But the opportunity to challenge revocation always exists.

2325. Johnson Viking Valiant info please

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-19 00:00:00 UTC
From: John Wilson <ac6gr@worldnet.att.net>
Message-ID: <5vufo4$lmp@bgtnsc03.worldnet.att.net>
Source record: 116134

Hi Folks;

I am returning my Johnson Viking Valiant to the air. It was my second transmitter, purchased in 1970 and last year rescued from my Dad's basement.

I have heard there are mods for 1) VFO stability ...it did have a bit of a drift... and 2) a mod to the modulator stage ...though don't know what improvment results.

Any replies would be appreciated.

And no, it's not for sale. My SX-111 would like some company of its own vintage.

John,

I've owned & operated a Valiant for the last 7 years. Mine was a basket case when I got it. There are many mods that can be done to the Valiant: audio, power supply ad infinitum.

However, I subscribe to the "keep it simple"/"if it ain't broke, don't fix it" theory.

In my Valiant, I did the basics: new, fresh electrolytics, not "new old stock" dried-up "shelf queens". New, fresh 6146's in the final and modulator, no "hamfest specials".

Don't forget to replace the hidden lytic located behind the audio driver transformer. This is the cathode bypass cap for the speech amp. Many Valiant owners fail to re-place this cap and the result is thin, tinny audio.

My recommendation is to NOT perform any of the so-called "better audio" mods. With fresh lytics and tubes, the Valiant is a fine sounding tx. The people that rave about the W6BM (and other) audio mods probably had a crappy sounding tx to begin with due to aging lytics and/or tubes. Try simple replacement steps first.

I have also heard that back in the "Good 'ol Days", old lane line
telegraph operators refered to the code skill of hearly Hams by saying they
where "Ham fisted" / sloppy. It was ment as an insult, like the song
"Yankee Doodle Dandy" was.

Someone just sent me the Valiant audio mods. I have copies of copies
here, so may not be suitable but I suppose I could SCAN them and send
you an attached file by e-mail or post it in a BINARY newsgroup for
you. So let me know how desperate you are!

They are supposed to make a big improvement in the sound of the
modulation. As far as DRIFT goes, mine is rock stable after about a 15
minute warm-up. How bad is yours?

>>>>>>>>I agree with everything you said but this comment.
A stock Valiant has an inductive filter in the audio
chain, primarily to stop splatter when using the
clipper. I have measured the response and in two
Valiants I own the filter effectively stops audio
over 3000 cps. Its got the same response as a
telephone circuit. If you like that sound and find
it pleasant then don't do any audio mods. However,
both the W6BM mods and the NS6V mods in Electric
Radio do two things. One, they open up the passband
and eliminate the standard "constipated" audio the
Valiant has. To me its irritating and not fun to
copy. Second, both mods include additional components
that should have been in the original design to
minimize the chance of blowing things like the
interstage transformer. If you want to see a Valiant
modulator redesign like the NS6V mods the prototype
for the NS6V mods is in the 1958 ARRL handbook on pg.
268. I used the NS6V mods and it took about $5.00
worth of parts and 1/2 hour to do the work. Its so
clean you don't remove any tubes or major assemblies
so it can be put back to stock in a jiffy.

Found that list a bit overwhelming due to heavy volume PLUS they
charge $12 or $15 a year ... for WHAT?

All other lists are free, so I encourage folks to try them first!
However, I should include the JACKATTACK boatanchors group with a
caveat I suppose.

I have links to their ARCHIVES on my links section. I find THAT more
useful.

If I want to reply to the whole group I can get the list and do that
too!

Thanks for your helpful comment though, and I will add that list.

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

Below are examples for the 'FooBar' list. You can substitute any valid
QTH.Net list name for 'FooBar' (it is a dummy place holder).

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

To subscribe to a digest, subscribe to listname-digest also or instead.

If you are switching from non-digest to digest, you must unsubscribe
listname and subscribe listname-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

Here is an example for the FooBar List:

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe FooBar-digest
unsubscribe FooBar

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index FooBar-digest

and get a list of files that are available by request.

Here is an example:

>>>> index FooBar-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044

```
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get FooBar-digest v01.n048

The file will be emailed to you, automagically!

-----
```

Paul,

I believe that this was the receiver which was used on the first ever Clipperton Atoll DXpedition in 1954. The operators on that expidition raved about the receivers performance, especially in light of where the sundpot cycle was during that time period. Hallicrafters really played up the expidition big time in their advertising of the period and the SX-88 acquired a bit of "cachet" to it.

In the mid 60s I had the use of an SX-88 and a National 303 at the same time. In my book the National was a better receiver (subjective opinion) but Hallicrafters never made a lot of them and now they are a collectors item and priced accordingly. Apparantly the "cachet" is still with it.

2339. RE: Drake L4B Bias Mod

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-20 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <342421E1.38AC08D9@erols.com>
Source record: 116064

My post of an L4B brought some inqueries about the bias mod, so I'll provide it here. The method is from the ARRL Handbook, the Heath SB-220, and Drake folklore. The L4B key-down (no drive) idle current is pretty high by current standards (no pun). Looking at the above references and the Eimac tube handbook confirms this. So, its a good idea to lower it a bit. Not so far as to change the operating class, however!

1. Obtain 6* IN4007 diodes and wire them in series as short is practical, leaving each "end" with a full length lead. Cover this diode string with some teflon tubing (good temp and insul spec).
2. Referring the the schematic, locate C40, R8, and the adjacent T/R relay contacts. Determine the wire coming from the T/R relay and C40 and going to R8 (as I recall R8 is on the top chassis) Don't worry... there's only one wire from the relay!. Disconnect and unbundle this wire from rest. C40 should be left connected from the relay contact to ground.
3. Determine where you want to position the insulated diode string. Note: I used 2 teflon insulated standoffs mounted on the chassis underside, left side (viewed bottom chassis, front panel toward you), with the diode string bridging it. Pay attention to its insulation from ground, etc.
4. Using the above unsoldered wire, identified in step 2, re-route it to the NEG - side of the diode string. Solder and insulate this joint depending on how you mounted/insulated your diode string.
5. Run a new wire from the POS + side of the diode string to the relay contact previously vacated.
6. Put the amp back together and fire (?) it up. You will notice a marked decrease in key-down, no-drive idle current, the exact amount depending on the manufacturer and age of your tubes.

In some units, it appears that 7 (vice 6) diodes may be required. Again, it depends on the tubes. I've found that 6 will generally do the job.

Hope this helps you guys (generic)! Drop a line if you have any questions. Final word... the Harbach Soft-start and Soft-key mods work great in the L4B. They may save you a power Xfromer! Nuff said.

From: David Medley <davemed@postoffice.worldnet.att.net>
Message-ID: <600rd6$sr5@mtinsc03.worldnet.att.net>
Source record: 116068

I have access to a store of R390A parts and pieces. Some of these are NOS and others pulls. No tubes however.
These parts include large tuning knobs, shaft extenders (IF unit), rack springsets, individual gears, meters, top and bottom covers, RF deck covers, metal labels, plus just about anything else you may need. These parts are not mine but I am acting for an old friend who does not have access to the Internet. I am also willing to try to answer questions and to service/repair individual sub assemblies. I do this as a hobby, not as a business.

2344. Help in IDing Military TX/RX Mobile Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-20 00:00:00 UTC
From: n9jcq@aol.com
Message-ID: <19970920222201.SAA20136@ladder01.news.aol.com>
Source record: 116069

Hi gang. Just picked up a military transimitter receiver pair and I'm not sure what it is. Theyr are small and appear to be mobile for Jeep mounting, The receiver has a shock pad on the base. The receiver receives from 1.5 mc to 12 MC in 3 increments on the band switch. It is both Voice AM I assume) and CW... No Id plates on it.. There are controls for AF Gain, RF Gain, Oscilator selector, Band switch, CW Pitch, and tuning. The Oscilator selector has settings for MO CO 1, CO 2, CO 3, CO4,

The Transmitter is missing an ID card also. There are 2 meters, 1 for RF Amps and 1 for Plate current. It also has the Oscillator Control (Labeled A), Bandswitch (Labeled B), Tunning (Labeled C), Coupling (Labeled D), Plate Tunning (Labeled) E, and ANT. COND (Labeled F). Both rreceiver and Transmitter have power connections on the front.. Any help would be greatly aprreciated!!!!!!!

Need following parts for Heath HW101:

-heterodyne osc. boards (all)
-plastic freq. readout dial (this one is cracked)
-plastic insulator for plate tuning cap. (goes between tuning rod and
cap.)
will consider junker radio with all above parts working, willing to pay
$30 for junker.
-
Also looking for parts for Kenwood TS-820s:
-need PLL boards (both) in working order

Need parts cheap, please email with parts list and prices.
This is not for me, but for a friend, so questions may take an extra bit
of time to get answered!
Thanks,
Randy, KC8CPK

2353. Announcing DFD2 (Digital Frequency Display)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-20 00:00:00 UTC
From: neil <aade@ix.netcom.com>
Message-ID: <34243C15.60B7@ix.netcom.com>
Source record: 116078

Announcing DFD2 (Digital Frequency Display)

DFD2 is designed to provide a digital frequency readout for the type radio that consists
of a bandswitched crystal controlled (or PLL) converter in front of a tunable IF.
Notable examples are most of the Collins equipment, the Yaesu FT-101, the Kenwood
TS-520 and the Heath SB-301. This type design was very common in the 50's, 60's and 70's.

DFD2 displays absolute accuracy of the carrier frequency for all modes (AM, CW, USB, LSB)
by measuring the HFO (crystal oscillator), VFO (tunable oscillator) and optionally the BFO
(Beat frequency oscillator). Because DFD2 measures all frequencies the accuracy is only
dependent on DFD2's reference oscillator which you can set.

The radio typically has to be slightly modified to bring out these signals. Exceptions are the
Collins 75S-1 and Heath SB-301 which have these signals available on the rear panel. DFD2
is essentially plug-and-play for these two units.

There is a general purpose DFD2 with adjustable IF offset. It provides 100Hz resolution.When
measuring the BFO, DFD2 automatically displays the mode of operation (blank, CW, USB, LSB).
The 'blank' allows for not connecting to the BFO in which case it uses the programmed IF offset.
The display does not show the exact carrier frequency if the BFO is not measured.

Custom microcontrollers are available programmed for the Collins, FT-101, TS-520 and SB-301.
The custom units have jumper programmable resolution of either 100Hz or 10Hz. When measuring
the BFO, DFD2 automatically displays the mode of operation (AM, CW, USB, LSB).

If you have a unit of this general design for which a custom microcontroller is not listed, send
e-mail or call and we can work togather to develop one for your type radio.

Fer sure, fer sure. Hell, HAM is the very best part of a pig. The
rest is just PORK. I cleaned out hog houses when I was a kid and I
guarantee, I HATE PIG. Pigs, especially sows, are mean and very
dangerous. Boars are, ... well.... boars. I do eat ham and bacon
(Note, both are smoked) but the rest, fergit it.

Hello, I am looking for a T-368 parts rig, or parts for the 368.

Specifically I need resistor R6 in the RF deck, but would be glad to
purchase the complete deck or even parts unit for spares.

If you do not have one, but do know someone that you could recommend
please advise.

Thank you.

2380. FS: Antique Hallicrafters SX-28 "Super Skyrider"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-21 00:00:00 UTC

I inherited an antique Hallicrafters SX-28 "Super Skyrider" receiver. Not being a ham, I realize that I'll never use it for anything, so I've finally decided to try to find it a good home.

For the uninitiated, the SX-28 is an antique shortwave receiver with enough dials on the front to run a nuclear power plant singlehandedly, and its construction is sturdy enough to do a tank proud.

I don't know exactly how old it is, but the manual (which includes full schematics), is dated November 1, 1943. The front cover says "frequency range - .55 to 43 megacycles."

Part of the tuning knob is broken off, but the unit seems otherwise to be in excellent condition. All the dial/knob captions are like new, the glass in front of the dials is intact, and the whole case is in prime shape. My uncle must have really taken care of it; If you didn't know, you'd never guess how old it is just by looking.

I don't really know how to use an SX-28, but when I plugged it in, I heard shortwave stations, even without an antenna attached. So it looks like the electronics is all functioning.

It comes with the original manual, and the original separate speaker and speaker cord (the speaker cord is thicker than the power cord!).

This receiver is obviously obsolete by today's standards, but it may provide hours of fascination for the right hobbyist.

I've attached a .GIF image from my Quickcam, so you can take a fuzzy look at it for yourself. The speaker is visible sitting on top of the receiver.

I'm looking for $300 plus insurance and shipping from the Boston area, but I'll listen to any reasonable offer. And you have to promise to give it a good home :-).

Regards,
Mike Gilbert

I find it worth the $12/year for the BoatAnchors subscription because this
group has almost zero spam and has zero off-topic political pollution.
The signal-to-noise ratio is very high, and if you are interested in
tube-based communications or test equipment, I recommend you ask for
the free trial period. WPE9CGQ

Clearing out the shack. Everything works unless otherwise noted. I don't have documentation for most items (sorry).

-- Heathkit HM-102 2kw HF power and swr meter. $30.00
-- Heathkit HM-2102 vhf/uhf power and swr meter (untested). $25.00
-- Heathkit SB-600 speaker. Matches the SB line. Looks great. $45.00
-- Heathkit IM-25 laboratory all solid state VOM. This is the one with the huge 6" analog meter. $45.00. Could use a paint job. Heath used that rubbery type paint.
-- Heathkit HM-2140 2kw HF swr and power meter. Needs work. Cosmetically looks real good. No scats with this. Has potential as a parts unit or fixer-upper. $25.00
-- Heathkit IG-102 sig gen. Looks fair. $35.00
-- Heathkit electronic eye signal chaser. Model T-4. $30.00
-- Heathkit sig gen model SG-8. $25.00
-- Heathkit o'scope calibrator. No model number. Untested. Mid 70's era. $20.00
-- Heathkit o'scope. Very old but very, very good condx. Model IO-12. $40.00
-- Eico model 377 audio generator. Looks fair. $30.00
-- Philco sig gen model 7200. $30.00
-- Textronix model 317 oscope. Timebase goes down to .2uS or .04uS expanded. A very neat, little o'scope. $75.00
-- Heathkit IM-18 VTVM. $30.00

If you want EVERYTHING listed I will cut you a huge percentage off of the individual prices.
